This book aims to further a debate about aspects of "playing" and "gaming" in connection with history. Reaching out to academics, professionals and students alike, it pursues a dedicated interdisciplinary approach. Rather than only focusing on how professionals could learn from academics in history, the book also ponders the question of what academics can learn from gaming and playing for their own practice, such as gamification for teaching, or using "play" as a paradigm for novel approaches into historical scholarship. "Playing" and "gaming" are thus understood as a broad cultural phenomenon that cross-pollinates the theory and practice of history and gaming alike.

'Sustainable' urban planning, policy and design professes to solve sustainability problems, but often depletes and degrades ever more resources and ecosystems and concentrates wealth and concretize social disparities. Positive Development theory holds that development could create more net ecological and social gains than no construction at all. It explains how existing conceptual, physical and institutional structures are inherently biased against the preservation and expansion of social and natural life-support systems, and proposes explicit reforms to planning, design and decision making that would enable development to increase future options and social and natural

life-support systems - in absolute terms. Net-Positive Design and Sustainable Urban Development is aimed at students, academics, professionals and sustainability advocates who wonder why existing approaches have been ineffective. It explains how to reform the anti-ecological biases in our current frameworks of environmental governance, planning, decision making and design - and suggests how to make these changes. Cities can increase both the 'public estate' (reduce social stratification, inequity and other causes of conflict, increase environmental quality, wellbeing and access to basic needs, etc.); and the 'ecological base' (sequester more carbon and produce more energy than used during construction and operation, increase ecological space to support ecological carrying capacity, ecosystem functions and services, restore the bioregions and wilderness, etc.). No small task, this new book provides academic theory and professional tools for saving the planet, including a free computer app for net-positive design.

The Australian bush has conjured up some crazy legends, but the rise and rise of two-time Dakar champion Toby Price is surely one of its best. Who knew that the remote town of Roto (pop. 41) would be the launching pad of one of the greatest motorsports athletes the world has seen, fit to tackle and triumph over the planet's most gruelling endurance race? Toby Price has lived a truly remarkable life, filled with ups, downs and every bump in the road imaginable: a childhood racing prodigy from the tender age of 2 - there was hardly a paddock that could contain him. After tearing through the junior ranks, taking out titles in both dirt track and motocross, Toby was living the dream, turning pro at 16 and joining the formidable KTM Racing team. Soon he was turning heads internationally and tapped to take on the most forbidding enduro courses the sport could throw at him. But the clock and the elements weren't his only adversaries. The death of his adored sister, Min; the tragic loss of mentors and rivals in the desert; countless broken bones and an accident that should have paralysed him for life - Toby's story is a study in staying true to yourself and following your passion to its ultimate end: rain, hail or shine. The person who emerged from the crucible of so

many trials is now one of the most beloved figures in Australian sport, a kid from the country whose need for speed took him to the top of the podium – and he’s not about to slow down now.

Cities are now home to 55% of the world’s population, and that number is rising. Urban populations across the world will continue to grow, including in megacities with populations over ten million. In 2016 there were 31 megacities globally, according to the United Nations’ World Cities Report, with 24 of those cities located in the Global South. That number is expected to rise to 41 by 2030, with all ten new megacities in the Global South where the processes of urbanization are intrinsically distinct from those in the Global North. The Routledge Handbook of Planning Megacities in the Global South provides rigorous comparative analyses, discussing the challenges, processes, best practices, and initiatives of urbanization in Middle America, South America, the Middle East, Africa, South Asia, East Asia, and Southeast Asia. This book is indispensable reading for students and scholars of urban planning, and its significance as a resource will only continue to grow as urbanization reshapes the global population.

*American Literature and American Identity* addresses the crucial issue of identity formation, especially national identity, in influential works of American literature. Patrick Colm Hogan uses techniques of cognitive and affective science to examine the complex and often highly ambivalent treatment of American identity in works by Melville, Cooper, Sedgwick, Apess, Stowe, Jacobs, Douglass, Hawthorne, Poe, and Judith Sargeant Murray. Hogan focuses on the issue of how authors imagined American identity—specifically, as universal, democratic egalitarianism—in the face of the nation’s clear and often brutal inequalities of race and sex. In the course of this study, Hogan advances our understanding of nationalism in general, American identity in particular, and the widely read literary works he examines.

Suspension is probably the most misunderstood aspect of motorcycle performance. This book, by America’s premier suspension specialist, makes the art and science of suspension tuning accessible to professional and backyard motorcycle mechanics alike. Based on Paul Thede’s wildly popular Race Tech Suspension Seminars, this step-by-step guide shows anyone how to make their bike, or their kid’s, handle like a pro’s. Thede gives a clear account of the three forces of suspension that you must understand to make accurate assessments of your suspension’s condition. He outlines testing procedures that will help you gauge how well you’re improving your suspension, along with your riding. And, if you’re inclined to perfect your bike’s handling, he even explains the black art of chassis geometry. Finally, step-by-step photos of suspension disassembly and assembly help you rebuild your forks and shocks for optimum performance. The book even provides detailed troubleshooting guides for dirt, street, and supermoto—promising a solution to virtually any handling problem.

Dave Luehr believes that right now is the best time in history to be in the collision repair business, but only for those with the right mindset. The authors share insightful lessons along with real-world stories of acutal collision repairers who have discovered the secrets that have propelled them to a much higher level than their competitors.

*Finding My Way Through Uncertain Landscapes and My Darkest Fears. How a Coast to Coast Motorcycle Adventure Changed My Life.* Twice Haynes Manuals

An adventure eight years in the making about not only navigating 6000 miles across America on dirt roads, but also navigating a divorce, career changes, addiction, and a mental disorder. A deeply personal and often humorous look at phobias, spirituality, and getting along with others. This book has numerous cringe-worthy moments from the highest mountain passes to claustrophobic caves and the path is often bumpy.
