Corporate Finance, by
Ross, Westerfield, and

Jaffe emphasizes the modern fundamentals of the theory of finance, while providing contemporary examples to make the theory come to life. The authors aim to present corporate finance as the working of a small number of integrated and

powerful intuitions, rather than a collection of unrelated topics. They develop the central concepts of modern finance: arbitrage, net present value, efficient markets, agency theory, options, and the trade-off between risk and return,

and use them to explain corporate finance with a balance of theory and application. The Tenth Edition includes many exciting new research findings as well as an enhanced Connect Finance, now with even more student learning resources. Connect is the only integrated learning system that empowers students by continuously adapting to deliver precisely what they need, when they need it, and how they need it, so that your class time is more engaging and effective.

The Twelfth Edition continues the tradition of excellence that has earned Fundamentals of Corporate Finance its status as market leader.

ISE Fundamentals of Corporate Finance John Wiley & Sons

Fundamentals of Investments was written to: 1. Focus on students as investment managers, giving them information they can act on instead of concentrating on theories and research without the proper context. 2. Offer strong, consistent

pedagogy, including a balanced, unified treatment of the main types of financial investments as mirrored in the investment world. 3. Organize topics in a way that makes them easy to apply--whether to a portfolio simulation or to real life--and support these topics with hands-on activities. The approach of this text reflects two central ideas. First, there is a consistent focus on the student as an individual investor or investments manager. Second, a consistent,

unified treatment of the four basic types of financial instruments--stocks, bonds, options, and futures--focusing on their characteristics and features, their risks and returns, and the markets in which they trade.
