CLARA MATTEO

Biomaterials Science and Tissue Engineering Springer

The single comprehensive treatment of the field, from the leading members of the Society of Ethnobiology The field of ethnobiology—the study of relationships between particular ethnic groups and their native plants and animals—has grown very rapidly in recent years, spawning numerous subfields. Ethnobiological research has produced a wide range of medicines, natural products, and new crops, as well as striking insights into human cognition, language, and environmental management behavior from prehistory to the present. This is the single authoritative source on ethnobiology, covering all aspects of the field as it is currently defined. Featuring contributions from experienced scholars and sanctioned by the Society of Ethnobiology, this concise, readable volume provides extensive coverage of ethical issues and practices as well as archaeological, ethnological, and linguistic approaches. Emphasizing basic principles and methodology, this unique textbook offers a balanced treatment of all the major subfields within ethnobiology, allowing students to begin guided research in any related area—from archaeoethnobiology to ethnomycology to agroecology. Each chapter includes a basic introduction to each topic, is written by a leading specialist in the specific area addressed, and comes with a full bibliography citing major works in the area. All chapters

cover recent research, and many are new in approach; most chapters present unpublished or very recently published new research. Featured are clear, distinctive treatments of areas such as ethnozoology, linguistic ethnobiology, traditional education, ethnoecology, and indigenous perspectives. Methodology and ethical action are also covered up to current practice. Ethnobiology is a specialized textbook for advanced undergraduates and graduate students; it is suitable for advanced-level ethnobotany, ethnobiology, cultural and political ecology, and archaeologically related courses. Research institutes will also find this work valuable, as will any reader with an interest in ethnobiological fields.

In The Wrong Place: Alien Marine Crustaceans - Distribution, Biology And Impacts provides a unique view into the remarkable story of how shrimps, crabs, and lobsters - and their many relatives - have been distributed around the world by human activity, and the profound implications of this global reorganization of biodiversity for marine conservation biology. Many crustaceans form the base of marine food chains, and are often prominent predators and competitors acting as ecological engineers in marine ecosystems. Commencing in the 1800s global commerce began to move hundreds - perhaps thousands - of species of marine crustaceans across oceans and between continents, both intentionally and unintentionally. This book tells the story of these invasions from Arctic waters to tropical shores, highlighting not only the importance and

impact of all prominent crustacean invasions in the world's oceans, but also the commercial exploitation of invasive crabs and shrimps. Topics explored for the first time in one volume include the historical roots of man's impact on crustacean biogeography, the global dispersal of crabs, barnacle invasions, insights into the potential scale of tropical invasions, the history of the world's most widely cultured shrimp, the invasive history and management of red king crabs in Norway, Chinese mitten crabs in England, and American blue crabs in Europe, the evolutionary ecology of green crabs, and many other subjects as well, touching upon all ocean shores.

The Vedic Core of Human History
Springer

The purpose of this document is to provide for the management of this public fallout shelter during its occupancy in a civil defense emergency. *Principles and Methods* Springer Nature
Tschumi Parc de la Villette is the first publication to document comprehensively Bernard Tschumi's first, and arguably still most celebrated project. With new and republished writing including a text by Bernard Tschumi and Anthony Vidler's "Trick-Track" originally published in 1986, alongside a newly-commissioned essay assessing the Parc from a contemporary and historical perspective, this book documents Parc de la Villette from its conception, through the 30 years of its existence, to the present. Tschumi Parc de la Villette includes drawings, concept sketches, models and photographs showing the development of the Parc over three decades, brought together in a single volume for the first time since

the 1980s. One of the "Grands Projets" commissioned by the French Government in the 1980s, Parc de la Villette set a benchmark for urban parks in the latter part of the twentieth century and into the twenty-first. Tschumi constructed a series of follies across the site, creating what he called "the largest discontinuous building in the world". Published to coincide with the 30th anniversary of the Parc, Tschumi Parc de la Villette broadly celebrates the project, and particularly the way in which it has been embraced by generations of Parisians and a diverse international public.

Newly Discovered Ties with the Ancient Culture and Languages, Including Basque, of the Pre-Indo-European Mediterranean World CRC Press

A companion to contemporary German crime fiction for English-speaking audiences is overdue. Starting with the earlier Swiss "classics" Glauser and Dürrenmatt and including a number of important Austrian authors, such as Wolf Haas and Heinrich Steinfest, this volume will cover the essential writers, genres, and themes of crime fiction written in German. Where necessary and appropriate, crime fiction in media other than writing (TV-series, movies) will be included. Contemporary social and political developments, such as gender issues, life in a multicultural society, and the afterlife of German fascism today, play a crucial role in much of recent German crime fiction. A number of contributions to this volume will comment on the literary reflection of these issues in the texts. The goal of the volume is to make available to English-speaking audiences, to students, teachers and to a wider circle of interested readers, a series of articles on genres, topics, authors, and texts that

will help them understand the scope and depth of German crime fiction, its ties to international traditions and also the specificity of the German context, its historical development and contemporary situation.

A Companion Springer

This book covers the basics of the biomaterials science its applications to bone tissue engineering. The introductory section describes the most necessary concepts and techniques related to the cell and molecular biology with a particular focus on evaluating the biocompatibility property. The layout of this book facilitates easier understanding of the area of bone tissue engineering. The book integrates the Materials Science and Biological Science. It covers processing and basic material properties of various biocompatible metals and ceramics-based materials, in vitro and in vivo biocompatibility and toxicity assessment in the context of bone tissue engineering, and processing and properties of metal-, ceramic- and polymer-based biocomposites, including the fabrication of porous scaffold materials. The book can be used as a textbook for senior undergraduate and graduate coursework. It will also be a useful reference for researchers and professionals working in the area.

Climate Change and Adaptive Innovation Climate Change and Adaptive Innovation A Model for Social Work Practice

This book of "Seed Spices" is the concise compilation of scientific information in a bridged form on seed spices production technologies. The book has been divided in to fourteen chapters covering all the cultivation aspects of major and minor seed spices. The efforts have been made to incorporate latest production, protection and postharvest technologies

of seed spices developed and generated at ICAR-NRCSS, Ajmer and other research and development organization working under the umbrella of AICRP on spices. It is hoped that the book will be of interest and benefit the researchers, students, development workers, teachers, policy makers, and all interested in seed spices.

Conservation and Utilization of Horticultural Genetic Resources Taylor & Francis

This guide is a successor to the much acclaimed Birds of the Indian Subcontinent by two of the same authors. Covering Pakistan, the superb plates are accompanied by a succinct text highlighting identification, voice, habitat, altitudinal range, distribution and status. The text is on facing pages to the plates, for easy reference and there are distribution maps for every species. Like previous guides covering Nepal, Bhutan, Northern India and Southern India, this guide is a perfect size for use in the field and will be an essential companion when visiting this region.

Concepts Walter de Gruyter GmbH & Co KG

The region of Rough Cilicia (modern area the south-western coastal area of Turkey), known in antiquity as Cilicia Tracheia, constitutes the western part of the larger area of Cilicia. It is characterised by the ruggedness of its territory and the protection afforded by the high mountains combined with the rugged seacoast fostered the prolific piracy that developed in the late Hellenistic period, bringing much notoriety to the area. It was also known as a source of timber, primarily for shipbuilding. The twenty-two papers presented here give a useful overview on current research on Rough Cilicia,

from the Bronze Age to the Byzantine period, with a variety of methods, from surveys to excavations. The first two articles (Ya?c?, Jasink and Bombardieri), deal with the Bronze and Iron Ages, and refer to the questions of colonisation, influences, and relations. The following four articles (Tempesta, de Souza, Tomaschitz, Rauh et al.) concern the pirates of Cilicia and Isauria who were a big problem, not only for the region but throughout the Mediterranean and Aegean during the late Hellenistic and especially Roman periods. Approaching the subject of Roman Architecture, Borgia recalls Antiochus IV of Commagene, a king with good relations to Rome. Six papers (Spanu, Townsend, Giobbe, Hoff, Winterstein, and Wandsnider) publish work on Roman architecture: architectural decoration, council houses, Roman temples, bath architecture, cenotaph, and public buildings. Ceramics is not neglected and Lund provides a special emphasis on ceramics to demonstrate how pottery can be used as evidence for connections between Rough Cilicia and northwestern Cyprus. Six contributions (Varinliog(lu, Ferrazzoli, Jackson, Elton, Canevello and Özy?ld?r?m, Honey) deal with the Early Christian and Byzantine periods and cover rural habitat, trade, the Kilise Tepe settlement, late Roman churches, Seleucia, and the miracles of Thekla. The final article (Huber) gives insight into methods applied to the study of architectural monuments.

Ethnobiology Artifice Incorporated
The origin of world civilization can be traced to the Indus Valley cradle, where brilliant and original thinkers made groundbreaking discoveries. The history of these discoveries is recorded in the vast Sanskrit literature. In this study, author M. K. Agarwal explores the

cultural and historical significance of the region. He explores Indus Valley culture, which encouraged creative thought as opposed to the Abrahamic faiths, which herded followers into dogmatic thinking. He holds that these religions prospered because of their unfettered hatred of the Vedic-Hindu-Buddhist peoples, who were demonized as pagans to be murdered, tortured, raped, enslaved, and robbed. He also considers the achievements of that culture, such as the creation of the most affluent, most scientifically advanced, and most spiritual of all societies, with archeological moorings that can be traced back to 8000 BC. No other region can even come close to transforming people and culture like the Indus Valley, but the world's Vedic roots have been ignored, shunned, and covered up. Uncover the history that has been lost and develop a deeper appreciation for the true cradle of human civilization with *The Vedic Core of Human History*.

Biomaterials for Musculoskeletal Regeneration Walter de Gruyter GmbH & Co KG

Kinder lieben Geschichten, sie benötigen sie sogar. Durch Geschichten tauchen sie nicht nur in eine fantastische Welt ein, sie lernen auch Sachverhalte zu verstehen. Storytelling als Methode zur Wissensvermittlung ist daher weit verbreitet und essentiell. Kann diese Form mithilfe der Technologie Augmented Reality auf ein neues, effektiveres Level gehoben werden? Welches Potential oder welche Risiken birgt Augmented Reality für Kinder? Den theoretischen Rahmen dieser Arbeit bildet das Thema Storytelling und dessen Einfluss auf Kinder als Tool zur Wissensbildung. Darauf folgen die technischen Grundlagen von Augmented Reality. Theoretische Lernansätze,

Beispiele aus der Praxis und diverse Studien zur Lerneffizienz zeigen ergänzende Faktoren in Hinblick auf den didaktischen Mehrwert auf. Ein auf Basis wissenschaftlicher Literatur erarbeitetes Modell mit Kategorien für AR Storytelling wird anschließend an drei Fallbeispielen angewendet. Die Ergebnisse werden anhand von Experteninterviews evaluiert, in einen praktischen Kontext gebracht und abschließend die Limitation im Einsatz der Technologie zur Wissensvermittlung an Kindern thematisiert.

Rough Cilicia Asian Educational Services

This book (24 chapters) covers the chemistry (chemical composition and structure) of the following spice plants and their products, and provides brief information on the morphology, and postharvest management (storage, packaging and grading) of these crops: black pepper (*Piper nigrum*), small cardamom (*Elettaria cardamomum*), large cardamom (*Amomum subulatum*), ginger, turmeric, cinnamon and cassia (*Cinnamomum* spp.), clove, nutmeg and mace, coriander (*Coriandrum sativum*), cumin (*Cuminum cyminum*), fennel, fenugreek, paprika and chilli (*Capsicum* spp.), vanilla (*Vanilla* spp.), ajowan (*Trachyspermum ammi*), star anise (*Illicium verum*), aniseed (*Pimpinella anisum*), garcinia (*Garcinia* spp.), tamarind, parsley, celery, curry leaf (*Murraya koenigii*) and bay leaf (*Laurus nobilis*). This book will be useful to researchers, industrialists and postgraduate students of agriculture, horticulture and phytochemistry, and to spice traders and processors.

Tschumi Parc de La Villette Dell

This much-anticipated visual tour of the New Acropolis Museum in Athens, Greece, examines both its architecture

and the archaeological treasures it was built to house, providing a behind-the-scenes look at the creation of the building as well as the restoration, preservation and housing of its exhibits. Original.

A Connective Concept iUniverse

This volume is the first English language presentation of the innovative approaches developed in the aesthetics of religion. The chapters present diverse material and detailed analysis on descriptive, methodological and theoretical concepts that together explore the potential of an aesthetic approach for investigating religion as a sensory and mediated practice. In dialogue with, yet different from, other major movements in the field (material culture, anthropology of the senses, for instance), it is the specific intent of this approach to create a framework for understanding the interplay between sensory, cognitive and socio-cultural aspects of world-construction. The volume demonstrates that aesthetics, as a theory of sensory knowledge, offers an elaborate repertoire of concepts that can help to understand religious traditions. These approaches take into account contemporary developments in scientific theories of perception, neuro-aesthetics and cultural studies, highlighting the socio-cultural and political context informing how humans perceive themselves and the world around them. Developing since the 1990s, the aesthetic approach has responded to debates in the study of religion, in particular striving to overcome biased categories that confined religion either to texts and abstract beliefs, or to an indisputable sui generis mode of experience. This volume documents what has been achieved to date, its significance for the study of religion and

for interdisciplinary scholarship.
New Directions in Leadership and Group Work Oxford University Press on Demand

Amid the grandeur of the remote Pacific Northwest stands Kingcome, a village so ancient that, according to Kwakiutl myth, it was founded by the two brothers left on earth after the great flood. The Native Americans who still live there call it Quee, a place of such incredible natural richness that hunting and fishing remain primary food sources. But the old culture of totems and potlatch is being replaced by a new culture of prefab housing and alcoholism. Kingcome's younger generation is disenchanted and alienated from its heritage. And now, coming upriver is a young vicar, Mark Brian, on a journey of discovery that can teach him—and us—about life, death, and the transforming power of love.

 Routledge

Dravidian Origins and the West Nomos Verlag

The development of German pop music represents a fascinating cultural mirror to the history of post-war Germany, reflecting sociological changes and political developments. While film studies is an already established discipline, German pop music is currently emerging as a new and exciting field of academic study. This pioneering companion is the first volume to provide a comprehensive overview of

the subject, charting the development of German pop music from the post-war period 'Schlager' to the present 'Diskursrock'. Written by acknowledged experts from Germany, the UK and the US, the various chapters provide overviews of pertinent genres as well as focusing on major bands such as CAN, Kraftwerk or Rammstein. While these acts have shaped the international profile of German pop music, the volume also undertakes in-depth examinations of the specific German contributions to genres such as punk, industrial, rap and techno. The survey is concluded by an interview with the leading German pop theorist Diedrich Diederichsen. The volume constitutes an indispensable companion for any student, teacher and scholar in the area of German studies interested in contemporary popular culture.

German Pop Music The Electrochemical Society

Social workers are called upon to shift from a human-centric bias to an ecological ethical sensibility by embracing love as integral to their justice mission and by extending the idea of social justice to include environmental and species justice. This book presents the love ethic model as a way to do eco-justice work using public campaigns, research, community arts practice and other nonviolent, direct action strategies. The model is premised on an active and ongoing commitment to the eco-values of love, eco-justice and nonviolence for the purpose of upholding the public interest. The love ethic model is informed by the stories of eco-activists who used nonviolent actions to address ecological issues such as: pollution; degradation of the environment; exploitation of farm animals; mining industry overriding First Nation Peoples'

land rights; and human health and social costs related to the natural resource industries, private land developments and government infrastructure projects. Informed by practice insights by activists from a range of eco-justice concerns, this innovative book provides new directions in social work and

environmental studies involving transformational change leadership and dialogical group work between interest groups. It should be considered essential reading for social work students, researchers and practitioners as well as eco-activists more generally.
