### Rediscovering Geography Simon and Schuster

NEW YORK TIMES BESTSELLER • In this “ambitious and challenging” (The New York Review of Books) work, the bestselling author of *Monsoon* and *Balkan Ghosts* offers a revelatory prism through which to view global upheavals and to understand what lies ahead for continents and countries around the world. In *The Revenge of Geography*, Robert D. Kaplan builds on the insights, discoveries, and theories of great geographers and geopolitical thinkers of the near and distant past to look back at critical pivots in history and then to look forward at the evolving global scene. Kaplan traces the history of the world’s hot spots by examining their climates, topographies, and proximities to other embattled lands. The Russian steppe’s pitiless climate and limited vegetation bred hard and cruel men bent on destruction, for example, while Nazi geopoliticians distorted geopolitics entirely, calculating that space on the globe used by the British Empire and the Soviet Union could be swallowed by a greater German homeland. Kaplan then applies the lessons learned to the present crises in Europe, Russia, China, the Indian subcontinent, Turkey, Iran, and the Arab Middle East. The result is a holistic interpretation of the next cycle of conflict throughout Eurasia. Remarkably, the future can be understood in the context of temperature, land allotment, and other physical certainties: China, able to feed only 23 percent of its people from land that is only 7 percent arable, has sought energy, minerals, and metals from such brutal regimes as Burma, Iran, and Zimbabwe, putting it in moral conflict with the United States. Afghanistan’s porous borders will keep it the principal invasion route into India, and a vital rear base for Pakistan, India’s main enemy. Iran will exploit the advantage of being the only country that straddles both energy-producing areas of the Persian Gulf and the Caspian Sea. Finally, Kaplan posits that the United States might rue engaging in far-flung conflicts with Iraq and Afghanistan rather than tending to its direct neighbor Mexico, which is on the verge of becoming a semifailed state due to drug cartel carnage. A brilliant rebuttal to thinkers who suggest that globalism will trump geography, this indispensable work shows how timeless truths and natural facts can help prevent this century’s looming cataclysms.

*Learning to Teach Geography in the Secondary School* has become the widely recommended textbook for student and new teachers of geography. It helps them acquire a deeper understanding of the role, purpose and potential of geography within the secondary curriculum, and provides the practical skills needed to design, teach and evaluate stimulating and creative lessons. This fully revised and updated second edition takes account of new legislation and important developments in geography education, including literacy, numeracy, citizenship, and GIS. Brand new chapters in this edition provide essential guidance on fieldwork, and using ICT in the context of geography teaching and learning. Chapters on teaching strategies, learning styles and assessment place the learner at the centre stage, and direct advice and activities encourage successful practice. Designed for use as

a core textbook *Learning to Teach Geography in the Secondary School* is essential reading for all student teachers of geography who aspire to become effective, reflective teachers. Praise for the first edition of *Learning to Teach Geography in the Secondary School*: 'This is a practical and visionary book, as well as being superbly optimistic. It has as much to offer the experienced teacher as the novice and could be used to reinvigorate geography departments everywhere. Practical activities and ideas are set within a carefully worked out, authoritative, conceptual framework.' - The Times Educational Supplement 'This is a modern, powerful, relevant and comprehensive work that is likely to become a standard reference for many beginning teachers on geography initial teacher training courses in England and Wales.' - Educational Review

As political, economic, and environmental issues increasingly spread across the globe, the science of geography is being rediscovered by scientists, policymakers, and educators alike. Geography has been made a core subject in U.S. schools, and scientists from a variety of disciplines are using analytical tools originally developed by geographers. *Rediscovering Geography* presents a broad overview of geography's renewed importance in a changing world. Through discussions and highlighted case studies, this book illustrates geography's impact on international trade, environmental change, population growth, information infrastructure, the condition of cities, the spread of AIDS, and much more. The committee examines some of the more significant tools for data collection, storage, analysis, and display, with examples of major contributions made by geographers. *Rediscovering Geography* provides a blueprint for the future of the discipline, recommending how to strengthen its intellectual and institutional foundation and meet the demand for geographic expertise among professionals and the public.

This book of photography represents National Geographic's Photo Ark, a major cross-platform initiative and lifelong project by photographer Joel Sartore to make portraits of the world's animals -- especially those that are endangered. His message: to know these animals is to save them. Sartore intends to photograph every animal in captivity in the world. He is circling the globe, visiting zoos and wildlife rescue centers to create studio portraits of 12,000 species, with an emphasis on those facing extinction. He has photographed more than 6,000 already and now, thanks to a multi-year partnership with National Geographic, he may reach his goal. This book showcases his animal portraits: from tiny to mammoth, from the Florida grasshopper sparrow to the greater one-horned rhinoceros. Paired with the prose of veteran wildlife writer Douglas Chadwick, this book presents an argument for saving all the species of our planet.

*Geography Matters* Geography Matters

The lack of geographic knowledge in the U.S. is alarming, especially in regard to the global environment in which we live. The National Geographic Society (NGS) has invested millions in geography education in an effort to reverse historic trends. This study surveyed the scope and effectiveness of NGS Geographic Alliance programs, targeting 4th-8th grade students. Selected states with Geographic Alliance programs were surveyed, chosen by the top- and bottom-placing students in the National Geographic Bee during the years 1989 through 1999. These state Alliance programs were analyzed to determine what, if any, historical programming supported student achievement in the NGS Bee. The results indicated that while there are many variables related to student learning and achievement, there was a strong correlation between programs focused on 4th-8th grade teachers and student performance in the Bee. This coincides with previous research supporting teacher quality in regard to student achievement.

Living Earth Community: Multiple Ways of Being and Knowing is a celebration of the diversity of ways in which humans can relate to the world around them, and an invitation to its readers to partake in planetary coexistence. Innovative, informative, and highly accessible, this interdisciplinary anthology of essays brings together scholars, writers and educators across the

sciences and humanities, in a collaborative effort to illuminate the different ways of being in the world and the different kinds of knowledge they entail -- from the ecological knowledge of Indigenous communities, to the scientific knowledge of a biologist and the embodied knowledge communicated through storytelling. This anthology examines the interplay between Nature and Culture in the setting of our current age of ecological crisis, stressing the importance of addressing these ecological crises occurring around the planet through multiple perspectives. These perspectives are exemplified through diverse case studies -- from the political and ethical implications of thinking with forests, to the capacity of storytelling to motivate action, to the worldview of the Indigenous Okanagan community in British Columbia. Living Earth Community: Multiple Ways of Being and Knowing synthesizes insights from across a range of academic fields, and highlights the potential for synergy between disciplinary approaches and inquiries. This anthology is essential reading not only for researchers and students, but for anyone interested in the ways in which humans interact with the community of life on Earth, especially during this current period of environmental emergency.

Made in Madagascar Atlas

Since the 1990s, the Ankarana region of northern Madagascar has developed a reputation among globe-trotting gemstone traders and tourists as a source of some of the world's most precious natural wonders. Although some might see Ankarana's sapphire and ecotourist trades as being at odds with each other, many local people understand these trades to be fundamentally connected, most obviously in how both serve foreign demand for what Madagascar has to offer the world. Walsh explores the tensions and speculations that have come with the parallel emergence of these two trades with sensitivity and a critical eye, allowing for insights into globalization, inequality, and the appeal of the "natural."
