ASHTYN KRISTOPHER

The Tao of Pooh and the Te of Piglet
 American University in Cairo Press
 Provides a critical survey of the theories, concepts, intellectual debates, substantive domains and traditions of study characterizing the analysis of things. This handbook charts an interdisciplinary field of studies that makes a fundamental contribution to an understanding of what it means to be human.

Hassan Fathy and Continuity in Islamic Arts and Architecture

Routledge

Microservices are small, but they offer big value. A microservice is a very small piece of a larger system that can be coded by one developer within one iteration. Microservices can be added and removed

individually, new developers can be immediately productive, and legacy code is easily replaced. Developers are no longer hampered by the communication and coordination overhead caused by monolithic systems. Savvy businesses are discovering that software development productivity can be greatly enhanced with the right engineering approach that enables even junior developers to double their productivity, while reducing delivery risk. The Tao of Microservices presents readers with the path to understanding how to apply microservices architecture in their real- world projects. This high-level book offers a conceptual view of microservice architectures, along with core concepts and their application. It also includes a detailed case study for the nodezoo.com system, including all source code and documentation. By the end of the book, readers will have explored in

depth the key ideas of the microservice architecture and will be able to design, analyze and implement systems based on this architecture. Purchase of the print book includes a free eBook in PDF, Kindle, and ePub formats from Manning Publications.

Surrealism and Architecture
 Contemporary writers position 'dialogue' at the heart of change theory, but what do we mean by 'dialogue'? The Tao of Dialogue explains through story what dialogue means, and how to leverage dialogic principles in managing relationships within the workplace. Accessible and innovative, The Tao of Dialogue explains the basic principles of dialogue, defined as a way of thinking and reflecting together with others, through the story of Michael, the CEO of a company about to embark on a life-changing journey. In the first half of the

book, he is introduced to the idea of dialogue by Hannah, an internal change practitioner working within the organisation. He is encouraged to engage in dialogue with those he seeks to influence, which requires him to examine his mindset and proactively make changes to the ways in which he is communicating with his team and the wider organisation. In the second half of the book Michael is assisted by Mark, an external consultant with expertise in dialogic team and organisational development, who helps him apply dialogic principles to leading his team. Engaging yet practical, each part concludes with a summary of the dialogue that has taken place and how the model can be used in the real world, as well as an overview of the journey of the organisation, team and individuals. Emerging from dialogue between seven experienced, international coaches, *The Tao of Dialogue* will be of interest to coaches in practice and training, as well as business leaders, HR and L&D professionals and consultants. It explains in simple terms how to transform human relationships, both one-to-one and team/group. It will also appeal to academics and students of coaching, executive development, change management and leadership development.

[Divulging Epistemology, Ethics, and Aesthetics of the Built Environment and Habitation](#) Univ of California Press

This little handbook acts as a brief introduction to philosophical ideas and how they intersect with architecture: its reception and appreciation as well as its practice. It suggests that since design is the core human discipline, being the only activity that involves the imaginative conception of ideas, leading to artifacts that are realised as actual constructions in the world, architecture itself can be regarded as a way of overcoming philosophical tensions by suggesting practical possibilities, namely designs, that appear to bridge between rival theories and approaches.

Concepts Themes & Practices Princeton University Press

Written with the non-scientist in mind, this book employs the molecule and its interactions to explain the characteristics of living organisms in terms of the underlying chemistry of life. Following introductory chapters on the fundamentals of life, attention then turns to small molecules such as hormones and neurotransmitters and subsequently to macromolecules including proteins and nucleic acids. The interactions between small and macromolecules remains a

central point throughout the book. These include enzymatic catalysis, hormone action, neurotransmission, regulation of metabolism, biosynthesis of macromolecules, the mechanism of action of drugs, taste, olfaction, learning and memory, and chemical communication. A second central point of emphasis is the sensitive relationship between chemical structure and biological activity. Examples abound and include why subtle changes in fatty acid architecture have positive or negative outcomes for human health in omega-three fatty acids and trans fats and how modest changes in the chemical decoration of the steroid skeleton provide the difference between male and female sex hormones. Beyond these examples taken from the chemistry of small molecules, the book includes a thoughtful consideration of genomics, including the relationship between genome structure and species. The theme of human health appears throughout the book.

Cardiovascular medicine, cancer, metabolic diseases, and diseases of the nervous system receive significant attention including consideration of how a variety of drugs work in combating these issues. In sum, the goal of this book is to inform the non-scientist community in a way that will lead to increased understanding of the relationship between chemistry and life.

The Tao Of The City Simon and Schuster

Summary *The Tao of Microservices* guides you on the path to understanding how to apply microservice architectures to your own real-world projects. This high-level book offers a conceptual view of microservice design, along with core concepts and their application. Purchase of the print book includes a free eBook in PDF, Kindle, and ePub formats from Manning Publications. About the Technology An application, even a complex one, can be designed as a system of independent components, each of which handles a single responsibility. Individual microservices are easy for small teams without extensive knowledge of the entire system design to build and maintain. Microservice applications rely on modern patterns like asynchronous, message-based communication, and they can be optimized to work well in cloud and container-centric environments. About the Book *The Tao of Microservices* guides you on the path to understanding and building microservices. Based on the invaluable experience of microservices guru Richard Rodger, this book exposes the thinking behind microservice designs. You'll master individual concepts like asynchronous messaging, service APIs, and

encapsulation as you learn to apply microservices architecture to real-world projects. Along the way, you'll dig deep into detailed case studies with source code and documentation and explore best practices for team development, planning for change, and tool choice. What's Inside Principles of the microservice architecture Breaking down real-world case studies Implementing large-scale systems When not to use microservices About the Reader This book is for developers and architects. Examples use JavaScript and Node.js.

About the Author Richard Rodger, CEO of voxgig, a social network for the events industry, has many years of experience building microservice-based systems for major global companies. Hassan Fathy, the Egyptian architect known for his recognition of the potential of vernacular forms as a vital force in contemporary architectural design, sought to integrate the traditions of Islamic art with his modern visions for living. Guided by Fathy's principles, Ahmad Hamid, an architect who collaborated with Hassan Fathy in the Institute for Appropriate Technology, identifies questions about the nature of Islamic art and its building culture, as well as the origins of modern architecture. This richly illustrated book provides new insights into Hassan Fathy's profuse, pathbreaking design documents and built projects, while exploring the socioeconomic, environmental, psychological, and esthetic components of Fathy's work in the light of a quest for a new universal modernity for the twenty-first century.

New Architecture and Technology

Cambridge Architectural Press

This is a historically informed examination of architecture's perceived absence in

surrealist thought, surrealist tendencies in the theories and projects of modern architecture, and the place of surrealist thought in contemporary design. This book represents current insights into surrealism in the thought and practice of modern architecture. In these essays, the role of the subconscious, the techniques of defamiliarization, aesthetic and social forces affecting the objects, interiors, cities and landscapes of the twentieth century are revealed. The book contains a diversity of voices from across modern art and architecture to bring into focus what is often overlooked in the histories of the modernist avant-garde. This collection examines the practices of writers, artists, architects, and urbanists with emphasis on a critique of the everyday world-view, offering alternative models of subjectivity, artistic effect, and the production of meanings in the built world.

Gigantism in Architecture and Digital Culture Princeton University Press

A beginner's guide to attaining wealth and prosperity through the practical uses of feng shui. Feng shui, the Chinese aesthetic practice of arranging your environment to maximize the flow of energy, has entered the mainstream of American culture, with more and more Americans realizing every day that feng shui is no New Age fad, but a proven and practical way to improve your life. This compact yet thorough guide to using feng shui to create prosperity and abundance helps you quickly gain a solid understanding of the basic principles of feng shui, as well as a fuller appreciation of the many varieties of success it can help you achieve. Unlike many Americanized feng shui books, *Feng Shui for Success* doesn't just concentrate on superficial quick fixes that amount to little more than home-decorating advice; its explanations and exercises help anyone, even feng shui novices, understand not only how to best practice feng shui to achieve success, but why it works. *Feng Shui for Success* helps readers learn to:

- evaluate new property, especially property used for business
- deal with office politics
- analyze the flow of energy in a home or business
- find out what the critical spaces are to cultivate prosperity
- discover the impact of a room's layout on the vital energy we use to accomplish our goals
- understand the feng shui properties and qualities of any environment you find yourself in

Rebuilding the Church on a New Foundation Psychology Press

A celebration of Taoist art traces the influence of philosophy on the visual arts in China.

The Tao Approach Toward Landscape and

Architecture John Wiley & Sons
Frank Lloyd Wright first noted the affinity between modern Western architecture and the philosophy of the ancient Chinese writer Laotzu. In this classic work, Amos Ih Tiao Chang expands on that idea, developing the parallel with the aid of architectural drawings and Chinese paintings. Now with a new foreword by David Wang, this book reveals the vitality of intangible, or negative, elements. Chang writes that these qualities make architectonic forms "come alive, become human, naturally harmonize with one another, and enable us to experience them with human sensibility." *The Tao of Architecture* continues to be essential reading for understanding the intersection between architecture and philosophy.

Tao of Spirit Routledge

The Tao of Architecture Princeton University Press

Allegorical Architecture Wipf and Stock Publishers

Allegorical Architecture offers the first detailed architectural analysis of built forms and building types of the minority groups in southern China and of the Dong nationality in particular. It argues that Dong architecture symbolically resembles its inhabitants in many ways. The built world is an extension of their body and mind; their experience of architecture is figurative and their understanding of it allegorical. Unlike the symbolism of historical architecture, which must be decoded through a speculative reconstruction of the past, the Dong tell stories about inhabitants in their living state in the recurrent process of ritualistic making and inhabiting of their built world. This book thus offers architectural analysis of both spatial dispositions (building types) and social life (the workings of buildings). Xing Ruan likens the built world to allegory to develop an alternative to textual understanding. The allegorical analogy enables him to decipher minority architecture less as a didactic "text" and more as a "shell," the inhabitation of which enables the Dong to renew and reinvent continually the myths and stories that provide them with an assurance of home and authenticity. Attention is focused less on the supposed meanings (symbolic, practical) of the architecture and more on how it is used, inhabited, and hence understood by people. Throughout, Ruan artfully avoids the temptation to textualize the built world and read from it all sorts of significance and symbolism that may or may not be shared by the inhabitants themselves. By likening architecture to allegory, he also subtly avoids the well-worn path of accounting for rich traditions

via a "salvage ethnography"; on the contrary, he argues that cultural reinvention is an ongoing process and architecture is one of the fundamental ingredients to understanding that process. Ruan offers "thick description" of Dong architecture in an attempt to understand the workings of architecture in the social world. Paying attention to Dong architecture within a regional as well as a global context makes it possible to combine detailed formal analysis of settlement patterns and building types and their spatial dispositions with their effects in a social context. Architecture, in a broad sense, is assumed to be an art form in which the feelings and lives of its makers and inhabitants are embodied. The artifice of architecture—its physical laws—is therefore analyzed and contested in terms of its instrumental capacity. *Allegorical Architecture* is a work of refreshing originality and compelling significance. It will provide timely lessons for those concerned with the meaning and social sustainability of the built world and will appeal to architects, planners, cultural geographers, anthropologists, historians, and students of these disciplines.

Tao-the Way : the Union of the Universe with the Human Being : the New Thinking in Science and Design : Holistic, Ecological and Biocybernetic, "Beyond Space-time" Routledge

Situated at an important juncture within the network of silk routes from China through central Asia, the oasis city of Dunhuang was an ancient site of Buddhist religious activity. Southeast of the city, the Mogao Caves, also known as the Caves of the Thousand Buddhas, are an astonishing group of hundreds of caves, carved in the cliffs between the fourth and fourteenth centuries, and containing sculptures and paintings. Further east sit the Yulin Caves, another critical and richly decorated site. Featuring some of the finest examples of Buddhist imagery to be found anywhere in the world, these caves have enticed explorers, archaeologists, artists, scholars, and photographers since the early twentieth century. *Visualizing Dunhuang: The Lo Archive Photographs of the Mogao and Yulin Caves* presents for the first time in print the comprehensive photographic archive-created in the 1940s by James C. M. Lo (1902-1987) and his wife, Lucy L. Lo (b. 1920)-of the remarkable Buddhist caves at Dunhuang. In this extraordinary nine-volume set, more than 2,500 black-and-white photographs provide an indispensable historical record. Invaluable for their documentary value and artistic quality, and thorough in their coverage and clarity, the images represent a rare

perspective on significant monuments, many now irretrievably changed. Exquisitely produced, this landmark publication is a definitive reference for scholars, collectors, and libraries in art history and Asian studies. Published in association with the Tang Center for East Asian Art, Princeton University. "Vol. 9: Essays" is also available separately: ISBN 9780691208169.

The Tao of Watercolor University of Hawaii Press

An utterly unique and accessible introduction to the ancient principles of Taoism with the world's favourite bear, Winnie-the-Pooh and his friend Piglet. Winnie-the-Pooh has a certain way about him, a way of doing things that has made him the world's most beloved bear, and Pooh's Way, as Benjamin Hoff brilliantly demonstrates, seems strangely close to the ancient Chinese principles of Taoism. And as for Piglet, he embodies the very important principle of Te, meaning Virtue of the Small. "It's hard to be brave," said Piglet, sniffing slightly, "when you're only a Very Small Animal." Rabbit, who had begun to write very busily, looked up and said: "It is because you are a very small animal that you will be useful in the adventure before us." Benjamin Hoff's explanations of Taoism and Te through Pooh and Piglet show that this is not an ancient and remote philosophy but something that you can use, here and now. Beautifully illustrated by E H Shepard.

Chasing the City OUP Oxford

The Tao of Jiu Jitsu serves as a guide to the sincere Jiu Jitsu practitioner. With varying insights into skill development, the author offers several paradigm shifts to accompany students on their path. Beyond

the mat, Chris Matakas discusses taking what we have learned from the art of grappling and applying these lessons to the rest of our lives. Jiu Jitsu is the vehicle with which we master ourselves ; and, as all roads lead to self-transcendence, we learn that Jiu Jitsu is a vehicle of unrivaled efficacy.

[The Role of Traditional Japanese Art and Architecture in the Work of Frank Lloyd Wright](#) Routledge

Husserl and Spatiality is an exploration of the phenomenology of space and embodiment, based on the work of Edmund Husserl. Little known in architecture, Husserl's phenomenology of embodied spatiality established the foundations for the works of later phenomenologists, including Maurice Merleau-Ponty's well-known phenomenology of perception. Through a detailed study of his posthumously published and unpublished manuscripts on space, DuFour examines the depth and scope of Husserl's phenomenology of space. The book investigates his analyses of corporeity and the "lived body," extending to questions of intersubjective, intergenerational, and geo-historical spatial experience, what DuFour terms the "environmentality" of space. Combining in-depth architectural philosophical investigations of spatiality with a rich and intimate ethnography, Husserl and Spatiality speaks to themes in social and cultural anthropology, from a theoretical perspective that addresses spatial practice and experience. Drawing on fieldwork in Brazil, DuFour develops his analyses of Husserl's phenomenology through spatial accounts of ritual in the Afro-Brazilian religion of Candomblé. The result is a methodological innovation and unique mode of spatial description that DuFour terms a "phenomenological ethnography

of space." The book's profoundly interdisciplinary approach makes an incisive contribution relevant to academics and students of architecture and architectural theory, anthropology and material culture, and philosophy and environmental aesthetics.

The Oxford Handbook of Process Philosophy and Organization Studies MIT Press

A joy to read this gem-like treasure of the Tao Te Ching is accessible, inclusive, poetic, and insightful. The Tao is an invitation to be in the flow of life in harmony with all beings and all things. This new version encourages us to begin from stillness and simply respond from an inner calm, quiet, and intuitive listening. Our innate sense of knowing through not-knowing is much needed in today's world. Discover how grace and ease most often appear by yielding to Lao Tzu's much cherished wisdom. "Cristina Viviani's inviting new translation of the Tao Te Ching captures both the simplicity and the complexity of these ancient teachings. In language that is clear, accessible, and possessed of a warmth sometimes lacking in other translations, Viviani's Tao Te Ching honors both the poetry and the philosophy of Taoism's central text." —John Brehm, author of *The Dharma of Poetry* "Beautiful and wise." —Dr. Alberto Pérez-Gómez, Emeritus Professor, Profesor Honoris Causa "I'm completely smitten! Loving this translation (even though Stephen Mitchell's has been my long-time favorite). I'm delighted to read and be immersed in this profoundly beautiful creation and integrate the wisdom and beauty the Tao brings. Now, I'm looking forward to holding this book in my hands and keeping it close by." —Moni Vangolen, Stillness Facilitator
