This book is devoted to the dangerous fishes found offshore the eastern and southern Arabian Peninsula. It covers

information about the main groups of dangerous fish species i.e., biting and predator fish group, venomous stinging fish, electric shock fish, harmful stinging fish, and poisonous fish. In the latter group, the book gives details about fishes that cause several types of toxicities to human. The purpose of this book is to thoroughly introduce life, nature and methods of dangerous fishes in order to form awareness about their danger and to take the proper preventive steps. It will appeal to researchers, scholars, divers, the sea coast visitors and students of marine biology as it is highly informative and carefully presented. This book is the first of its kind for the Arabian region in particular and the Middle East in general. *Neuromuscular Case Studies E-Book*

Biopolymers from Renewable Resources

is a compilation of information on the diverse and useful polymers derived from agricultural, animal, and microbial sources. The volume provides insight into the diversity of polymers obtained directly from, or derived from, renewable resources. The beneficial aspects of utilizing polymers from renewable resources, when considering synthesis, processing, disposal, biodegradability, and overall material life-cycle issues, suggests that this will continue to be an important and growing area of interest. The individual chapters provide information on synthesis, processing and properties for a variety of polyamides, polysaccharides, polyesters and polyphenols. The reader will have a single volume that provides a resource from which to gain initial insights into

this diverse field and from which key references and contacts can be drawn. Aspects of biology, biotechnology, polymer synthesis, polymer processing and engineering, mechanical properties and biophysics are addressed to varying degrees for the specific biopolymers. The volume can be used as a reference book or as a teaching text. At the more practical level, the range of important materials derived from renewable resources is both extensive and impressive. Gels, additives, fibers, coatings and films are generated from a variety of the biopolymers reviewed in this volume. These polymers are used in commodity materials in our everyday lives, as well as in specialty products.

This book focuses on the lobar anatomy of the breast and on the sick lobe concept – a novel theory of breast cancer development that is gaining ever wider acceptance – and explores their significance for innovative surgical treatment. Special attention is paid to the role of ductal echography, a technique capable of clearly depicting the structures of cancer in relation to the structures of the sick lobe. Having established a sound theoretical and practical basis through detailed coverage and correlation of anatomy, pathology, and imaging appearances, the book goes on to describe a revolutionary surgical approach particularly suitable for the treatment of multifocal and multicentric breast carcinomas. Such tumors account for

more than a third of all cases of breast carcinoma and are often treated by mastectomy. The proposed new breast-conserving technique yields excellent cosmetic results and entails a very low risk of recurrence. The book will appeal to a wide readership, including radiologists, surgeons, oncologists, pathologists, as well as residents.

The current volume presents new empirical data on well-being of youth and emerging adults from a global international perspective. Its outstanding features are the focus on vast geographical regions (e.g., Europe, Asia, Africa, North and South America), and on strengths and resources for optimal well-being. The international and

multidisciplinary contributions address the complexities of young people's life in a variety of cultural settings to explore how key developmental processes such as identity, religiosity and optimism, social networks, and social interaction in families and society at large promote optimal and successful adaptation. The volume draws on core theoretical models of human development to highlight the applicability of these frameworks to culturally diverse youth and emerging adults as well as universalities and cultural specifics in optimal outcomes. With its innovative and cutting-edge approaches to cultural, theoretical and methodological issues, the book offers up-to-date evidence and insights for researchers, practitioners and policy makers in the fields of cross-cultural

psychology, developmental science, human development, sociology, and social work.

According to many textbooks, carbohydrates are the photosynthesis and mitochondrial respiration fluctuate in a circadian manner in almost every unique final products of plant photosynthesis. However, the

photoautotrophic production of organic organism studied. In addition, external triggers and environmental influences necessitate precise and nitrogenous compounds may be just as old, in appropriate re-adjustment of relative flux rates, to evolutionary terms, as carbohydrate synthesis. In the algae and plants of today, the light-driven assimilation prevent excessive swings in energy/resource provision of nitrogen remains a key function, operating and use. This requires integrated control of the alongside and intermeshing with photosynthesis and expression and activity of numerous key enzymes in respiration. Photosynthetic production of

reduced photosynthetic and respiratory pathways, in order to carbon and its reoxidation in respiration are necessary co-ordinate carbon partitioning and nitrogen assimilation. to produce both the energy and the carbon skeletons required for the incorporation of inorganic nitrogen This volume has two principal aims. The first is to into amino acids. Conversely, nitrogen assimilation provide a comprehensive account of the very latest developments in our understanding of how green is required to sustain the output of organic carbon cells reductively incorporate nitrate and ammonium and nitrogen.
