 CCNA 200-125 Exam: The 7 Layer OSI Model
 OSI Model Concepts In preparation of our CCNA exam, we want to make sure we cover the various concepts that we could see on our Cisco CCNA exam. CCNA 200-125 Exam: The 7 Layer OSI Model ...
 Top layer of OSI model is application layer. It provides the protocols and services that are required by the network-aware applications to connect with the network. FTP, TFTP, POP3, SMTP and HTTP are the few examples of standards and protocols used in this layer.
 OSI Seven Layers Model Explained with Examples
 Application(Layer 7) This layer

supports application and end-user processes. Communication partners are identified, quality of service is identified, user authentication and privacy are considered, and any constraints on data syntax are identified. Everything at this layer is application-specific.
 OSI (Open Source Interconnection) 7 Layer Model - 15624 ...
 OSI (Open System Interconnection) Model defines a network framework to implement the protocol in Seven Layers. The main purpose of the OSI Model is to guide the vendors and developers, the OSI Model doesn't perform any functions in networking it is just a medium to understand how networking communication takes place.

 Since the OSI Model is the basic building block of computer networks, the Cisco CCNA 640-802 exam

will definitely test your knowledge extensively on the OSI Model. So you have to study the OSI Model very carefully. The OSI reference Model consists of seven layers with each layer describing a particular network function. CCNA 640-802 Tutorial: seven-layer OSI Model As you can see from the figure above, Application Layer (Layer - 7) is the highest level of the model while Physical Layer (Layer - 1) is the lowest. First three layers are defined as "Media Layers" and Layer 4-5-6-7 are defined as "Host Layers".
