## CONNER JACOB

Drugs for Neglected Diseases Initiative - Wikipedia Chagas Disease DndiTransmission. Caused by the kinetoplastid protozoan parasite *Trypanosoma cruzi*, Chagas disease is primarily transmitted by large, blood-sucking reduviid insects widely known as “the kissing bugs” in endemic countries. Other ways of transmission are blood transfusion, organ transplantation, as well as congenital and oral transmissions. Read more.  
 About Chagas Disease - DNDi  
 Drugs for Neglected Diseases initiative (DNDi) is a collaborative, patients’ needs-driven, non-profit drug research and development (R&D) organization that is developing new treatments for neglected patients.  
 Chagas Disease Target Product Profile - DNDi  
 Chagas disease, also known as American trypanosomiasis, is a potentially life-threatening illness caused by the protozoan parasite, *Trypanosoma cruzi* (T. cruzi). It is named after Carlos Chagas, a Brazilian doctor who discovered the disease in 1909.
