Cardiomyopathy is a disease of your heart muscle, or myocardium. It gets stretched, thickened, or stiff. Your heart may get too weak to pump well. There are many possible causes of the disease, including genetic heart conditions, reactions to certain drugs or toxins (such as alcohol), and infections from a virus. Heart Disease: Types, Causes, and Symptoms Your risk may be greater if you

have close family members who have a history of heart disease. Other risk factors for heart disease include: obesity, insulin resistance or diabetes, high cholesterol and blood pressure, family history of heart disease, being physically inactive, smoking. Heart Disease Causes and Risk Factors Heart failure results from injury to the myocardium from a variety of causes including ischemic heart disease, hypertension, and diabetes. Less common etiologies include cardiomyopathies, valvular disease, myocarditis, infections, systemic toxins, and cardiotoxic drugs. The pathophysiology of heart failure. The pathophysiology of the

link between diabetes and cardiovascular disease (CVD) is complex and multifactorial. Understanding these profound mechanisms of disease can help clinicians identify and treat CVD in patients with diabetes, as well as help patients prevent these potentially devastating complications. The Pathophysiology of Cardiovascular Disease and Diabetes ... Heart (cardiovascular) disease definition and facts Heart disease refers to various types of conditions that can affect heart function. These types include: Coronary artery (atherosclerotic) heart disease that affects the arteries to the heart Coronary artery disease is the most common type of heart

disease in the US.5

Heart attacks have several major warning signs and symptoms: Chest pain or discomfort. Upper body pain or discomfort in the arms, back, neck, jaw, or upper stomach. Shortness of breath. Nausea, lightheadedness, or cold sweats. Heart Disease Facts | cdc.gov
Written by internationally recognized Harvard Medical School faculty and select medical students, Pathophysiology of Heart Disease, Sixth Edition provides a solid foundation of knowledge regarding

diseases of the heart and circulation. Under the experienced editorial guidance of Dr. Leonard S. Lilly, this best-selling monograph has an outstanding reputation among medical students and faculty worldwide. Pathophysiology of Heart Disease - Wolters Kluwer 2. Etiology. Heart failure is caused by a loss of a critical quantity of functional myocardial cells after injury to the heart from a number of causes. The most common etiologies are ischemic heart disease, hypertension, and diabetes [3], [8]. The pathophysiology of heart failure - ScienceDirect But coronary artery disease is just one of many types of heart disease. Women and Heart Disease Heart

disease is the leading cause of death in women over 40 years old, especially after menopause ... Heart Disease: Overview & Facts Revised and updated for its Fifth Edition, Pathophysiology of Heart Disease is a comprehensive, clear, concise, and easy-to-understand introduction to cardiovascular diseases. Pathophysiology of Heart Disease: A Collaborative Project ... But heart disease is the number one killer in the U.S. It is also a major cause of disability. There are many different forms of heart disease. The most common cause of heart disease is narrowing or blockage of the coronary arteries, the blood vessels that supply

blood to the heart itself. Heart Disease | MedlinePlus Heart disease causes 1 in 3 women's deaths each year, killing approximately one woman every minute. 90 percent of women have one or more risk factors for developing heart disease. Since 1984, more women than men have died each year from heart disease and the gap between men and women's survival continues to widen. Causes and Prevention of Heart Disease | Go Red for Women Coronary heart disease (CHD) is usually caused by a build-up of fatty deposits (atheroma) on the walls of the arteries around the heart (coronary arteries). The build-up of atheroma makes the arteries

narrower, restricting the flow of blood to the heart muscle. This process is called ... Coronary heart disease - Causes - NHS A family history of heart disease is associated with a higher risk of coronary artery disease, especially if a close relative developed heart disease at an early age. Your risk is highest if your father or a brother was diagnosed with heart disease before age 55 or if your mother or a sister developed it before age 65. Causes of valvular heart disease.
