Andrews McMeel Publishing Progress in Physics has been created for publications on advanced studies in theoretical and experimental physics, including related themes from mathematics. *Robin Takes 5* Routledge Covering subjects including manifolds, tensor fields, spinors, and differential forms, this textbook introduces geometrical topics useful in modern theoretical physics and mathematics. It develops understanding through over 1000 short

exercises, and is suitable for advanced undergraduate or graduate courses in physics, mathematics and engineering.

#### Document Layout Analysis

Andrews Mcmeel+ORM Document layout analysis (DLA) is a crucial step towards the development of an effective document image processing system. In the early days of document image processing, DLA was not considered as a complete and complex research problem, rather just a pre-processing step having

some minor challenges. The main reason for that is the type of layout being considered for processing was simple. Researchers started paying attention to this complex problem as they come across a large variety of documents. This book presents a clear view of the past, present, and future of DLA, and it also discusses two recent methods developed to address the said problem.
