"This new Australian text addresses a broad range of accounting theory and research while linking this to current accounting practice and the impact this has on businesses. The text goes beyond an analysis of theory, thought and ideas to include a more holistic view of other influences to the accounting profession including historical and cultural impacts and the regulation of the discipline. These influences are then related back to real, everyday problems faced by accountants."-- Publisher's website.

A Simple Mindset Tweak Will Change Your Life. After a fifteen-year nightmare operating a stagnant service business, Sam Carpenter developed a down-to-earth methodology that knocked his routine eighty-hour workweek down to a single hour—while multiplying his bottom-line income more than twenty-fold. In *Work the System*, Carpenter reveals a profound insight and the exact uncomplicated, mechanical steps he took to turn his business and life around without turning it upside down. Once you “get” this new vision, success and serenity will come quickly. You will learn to:

- Make a simple perception adjustment that will change your life forever.
- See your world as a logical collection of linear systems that you can control.
- Manage the systems that produce results in your business and your life.
- Stop fire-killing. Become a fire-control specialist!
- Maximize profit, create client loyalty, and develop enthusiastic employees who respect you.
- Identify insidious “errors of omission.”
- Maximize your biological and mechanical “prime time” so that you are working at optimum efficiency.
- Design the life you want—and then, in the real world, quickly create it! You can keep doing what you have always done, and continue getting mediocre, unsatisfactory results. Or you can find the peace and freedom you’ve always wanted by transforming your business or corporate department into a finely tuned machine that runs on autopilot!

Economic development in the long run is seen as a process of structural change that is affected by economic growth. Malaysia is one of the middle-income economies that are going through rapid structural change. Since the mid 1980s it has changed to an industrially based economy with large-scale export of electrical and electronic components. However, thirty years after Malaysia's re-distributive policies have been exercised, regional inequality still exists. This book examines the nature and impact of regional policies in relation to the patterns of demographic and economic structural change and in relation to growth, distribution and income disparities across regions in Peninsular Malaysia. The book also explores the degree to which differences in regional manufacturing distribution and concentration have contributed to regional inequality. It concludes with a number of recommendations for regional policies that will reduce this inequality.
