Good Decisions, Better Outcomes
Routledge

Decisions to withdraw or withhold life-sustaining treatment are contentious, and offer difficult moral dilemmas to both medical practitioners and the judiciary. This issue is exacerbated when the patient is unable to exercise autonomy and is entirely dependent on the will of others. This book focuses on the legal and ethical complexities surrounding end of life decisions for critically impaired and extremely premature infants. Neera Bhatia explores decisions to withdraw or withhold life-sustaining treatment from critically impaired infants and addresses the controversial question, which lives are too expensive to treat? Bringing to bear such key issues as clinical guidance, public awareness, and resource allocation, the book provides a rational approach to end of life decision making, where decisions to withdraw or withhold treatment may trump other competing interests. The book will be of great interest and use to scholars and students of bioethics, medical law, and medical practitioners.

First Steps to Restoring Health and Growth Harvard Business Press

The international best seller *Human Resource Champions* helped set the HR agenda for the 1990s and enabled HR professionals to become strategic partners in their organizations. But earning a seat at the executive table was only the beginning. Today's HR

leaders must also bring substantial value to that table. Drawing on their 16-year study of over 29,000 HR professionals and line managers, leading HR experts Dave Ulrich and Wayne Brockbank propose The HR Value Proposition. The authors argue that HR value creation requires a deep understanding of external business realities and how key stakeholders both inside and outside the company define value. Ulrich and Brockbank provide practical tools and worksheets for leveraging this knowledge to create HR practices, build organizational capabilities, design HR strategy, and marshal resources that create value for customers, investors, executives, and employees. Written by the field's premier trailblazers, this book charts the path HR professionals must take to help lead their organizations into the future. Ulrich is a professor at the University of Michigan School of Business and the author of 12 books and more than 100 articles on the subject of human resources. Brockbank is a clinical professor of business at the University of Michigan School of Business, the author of award-winning papers on HR strategy, and an adviser to top global organizations.

Managers often must make decisions that depend on decisions in other parts of the organization. These interactions create a network of interdependent choices and make strategizing difficult. In this chapter, the authors explore the intersection between organizing and strategizing. Motivated by real examples that run contrary to conventional wisdom, the authors examine how firms organize themselves to strategize well. In particular, they examine "premature

lock-in"—how a firm's strategizing efforts can become stuck in a web of conflicting constraints prematurely, before managers have explored a wide enough range of possibilities. A key role of organizing is to free strategizing efforts and encourage broad search. At the same time, organizing must ensure that strategizing efforts stabilize after the firm discovers an effective set of choices. Balancing search and stability, the authors argue, is a central challenge of organizing. They explore this challenge with an agent-based simulation that shows (1) how a change in organizational structure—for example, a shift from decentralization to integration—may reflect not a reversal of early mistakes but an effective sequence of organizing; and (2) why firms may benefit from unnecessary overlap between departments. They conclude that a period of decentralization and unnecessary overlap can be seen as organizational mechanisms to ensure the broad, early search that a firm needs in order to cope with interactions among strategic decisions.
