Scuba Diving Safety

If you do not yet scuba dive but are thinking of learning, then *Scuba Fundamental - Start Diving the Right Way* is for you. It takes you from the germ of the idea that you might like to try scuba diving up to the point where you have done around 20 dives. This is not your standard how-to scuba diving manual. It is very different. The purpose of *Scuba Fundamental* is not to teach you how to dive. A dive instructor will do that. But this book will make the learning process much easier. It will help you make the right choices and avoid the pitfalls that await new and uninformed divers coming into the sport. It will also set you well on the road to becoming a capable and competent lifelong diver. *Scuba Fundamental* tells you how to make sure you are prepared for a scuba diving course and what a good beginners course should entail. It tells you how to choose a good instructor, how to decide which operators to dive with after you have

finished your course and what sort of dives you should be doing when you first start diving. You will learn the many ways in which diving will change your life and also acquire some extremely valuable advice on the etiquette involved in the sport. Throughout the book and especially in the chapter "It Happened to Me" you will be entertained, educated and encouraged by anecdotes from people who are now experienced divers but were once beginners too. There is also an entire section devoted to diving safety, much of which covers vitally important aspects of scuba diving that standard training manuals don't emphasise enough or even leave out completely. The book's message is: start scuba diving the right way and you will be relaxed and ready for the adventure. You will have more fun, make fewer mistakes and be confident in the fact that you are well informed, have made the best choices and have spent your money wisely. *Scuba Fundamental* is a unique, reliable and essential guide: one that you can trust completely and follow during this formative phase of your scuba diving life. "I wish I

had had this book to read when I learned to dive. I remember being totally confused." Robin Yao, Executive Editor, *EZDIVE* magazine "This is the book divers should give to friends when they say they want to learn to scuba dive." Ian Thomas, Scuba Instructor Trainer

'The truth is, Partha,' Krishna said, 'that there is no "better" path. Both paths - the path of knowledge and the path of action - work just as well. It is up to you to pick the one that you are suited to.' The Bhagavad Gita is a profound book from India that people

have cherished for over 2500 years. It emphasises kindness and understanding when we make mistakes, and tells a compelling story about Prince Arjuna and his friend Krishna. They engage in a crucial conversation about the war against the most powerful and dangerous enemy of all - the one that lives within our minds. Roopa Pai's spirited, one-of-a-kind retelling is engaging, easy to grasp, and leaves a lasting impact. After you finish reading, you'll find yourself contemplating its wisdom and feeling a sense of inner strength.

Diving tourism has seen such growth in the past decade that the World Tourism Organization suggests it will soon become as important as ski tourism. According to a WTO estimate, there are now 5-7 million active certified divers in the world. Despite its development as a mass tourism activity, its dynamic growth and great economic importance, particularly for island destinations in the tropics, surprisingly few scientific publications address this form of special-interest

tourism. In the light of this, *New Frontiers in Marine Tourism* is the first attempt to describe and analyse this tourism sector comprehensively. The first part of the book is devoted to an overview of the dive sector, addressing different types of diving locations and their particular characteristics, the geographical distribution of dive locations, the origins of dive tourists, as well as the growth and economic significance of diving tourism in destinations worldwide. In its second section, the book outlines different motivations and typologies of diving tourists, their learning behaviour, knowledge of marine environments, and their interaction with flora and fauna. The third section focuses on diver satisfaction, attitudes and preferences, diver education and interpretation, compliance with regulations by divers and tour operators, environmental impacts, and aspects of risk and health, thus highlighting a variety of pressing topics related to the management of diving tourism. * First book of its kind to address the rapidly growing area of diving tourism *

Contributions from academic experts in the field, it addresses hot issues such as environmental impacts, health and safety, education, and economic factors and impacts. * Brilliantly edited, it represents a coherent and cohesive collection of critically important issues in this area.

A manual that combines education and theoretical research with practical activity, a result of the experience of Umberto Pelizzari, one of the major protagonists in the history of freediving (16 world records et the first man to break the wall of 150 meters in depth). A complete text, which accompanies the freediver into the discovery of a fascinating sport and discipline with extraordinary mental components. With its previous editions, "Manual

of Freediving" has been the most widely distributed freediving manual in the world, translated into eight languages, selling more than 30,000 copies in Italy. In this "Manual of Freediving, underwater on a single breath", each chapter has been completely re-written and enriched with the most important innovations and knowledge that in the recent years have contributed to improving and making the practice of freediving even safer and more enjoyable. The chapter on relaxation and mental training represents one of the greatest insights into the application of mental strength in freediving. Developed in a very simple and practical way, it contains various "guides" for the autogenic training sessions and mental training. From basic to advanced level, topics such as the following, are dealt with simplicity and many practical references: breathing (the correct use of the diaphragm, respiratory sensitivity and effectiveness, abdominal and thoracic breathing, chest mobilization, etc.), equalization (all manoeuvres are described and trained

with the latest educational protocols, dry and in water), physical and specific training, monofin, safety in the water, etc. According to the most modern freediving teaching methods, over 400 pages of text and illustrated exercises with useful images will allow students and their instructors to build a straight forward and effective didactic path.
