Much research has attempted to show direct linear relations between genes and disorder. However, scientists have been discouraged by inconsistent findings based on this simple gene-phenotype approach. The alternative approach is to incorporate information about the environment. A gene-environment interaction approach assumes that environmental pathogens cause disorder, whereas genes influence susceptibility to environmental pathogens. This book brings together contributions from experts from multiple disciplines who discuss: How epidemiological cohort studies can better integrate physiological (mechanistic) measures; How best to characterise subjects' vulnerability versus resilience by moving beyond single genetic polymorphisms; How gene hunters can benefit from recruiting samples selected for known exposures; How environmental pathogens can be used as tools for gene hunting; How to deal with potential spurious (statistical) interactions, and How genes can help explain fundamental demographic properties of disorders (e.g. sex distribution, age effects).

From an accomplished practitioner, curator and theorist comes *Stick Figures: Drawing as a Human Practice* to reset the terms for an ancient activity. D.B. Dowd embraces drawing as a process for everyone, not just artists. This beautifully designed book uses a wonderful range of visual samples to explore an elemental human capacity. The artifacts of drawing (chiefly, illustrations and cartoons) are rescued from outdated hierarchies of taste and engaged on their own theoretical and cultural terms. -Pithy, companionable and funny, *Stick Figures* will change the discussion about drawing, illustration, cartooning, design and printmaking. -Taxonomically clear, technologically specific and free of art-speak for general readers and humanists who work with published images. -Thoughtful, critical and precise about the damage done by fetishized aesthetics; provides new tools for engaging popular visual production in the modern era.
