Key Articles from the Anaesthesia and

Intensive Care Medicine Journal

Saunders Limited

This eBook is one of 10 carefully selected collections of key articles from the Anaesthesia and Intensive Care Medicine journal - a continually updated, evidence-based learning resource, based on the RCOA Curriculum. It is ideal for

trainees approaching a new subspecialty and/or when preparing for the FRCA (or similar) exams. It will also prove an invaluable, authoritative refresher for life-long learning and CPD. Related MCQs are included to test your understanding.

**Pain Medicine: Prepare for the FRCA**

Cambridge University Press

Management of the airway is an important and challenging aspect of many clinicians' work and is a source of complications and litigation. The new edition of this popular book remains a clear, practical and highly-illustrated guide to all necessary aspects of airway management. The book has been updated throughout, to cover all changes to best practice and clinical management and provides extensive

coverage of the key skills and knowledge required to manage airways in a wide variety of patients and clinical settings. The best of the previous editions has been preserved, whilst new chapters on videolaryngoscopy, awake tracheal intubation, lung separation, airway ultrasonography, airway management in an epidemic and many more have been added. This is an essential text for anyone who manages the airway including trainees and specialists in anaesthesia, emergency medicine, intensive care medicine, prehospital medicine as well as nurses and other healthcare professionals.

Companion to Specialist Surgical Practice Elsevier Health Sciences

A practical guide to safe anaesthesia and perioperative management of the obese

patient.

**AAGBI Core Topics in Anaesthesia**

**2015** Cambridge University Press

Provides surgeons in higher training and those wanting an update in general and emergency surgery with a practical reference source of the most current information on recent developments, the latest management issues and operative procedures, thoroughly referenced and supported by evidence-based data.

Core Topics in Airway Management

Cambridge University Press

This eBook is one of 10 carefully selected collections of key articles from the Anaesthesia and Intensive Care Medicine journal - a continually updated,

evidence-based learning resource, based on the RCOA Curriculum. It is ideal for trainees approaching a new sub-specialty and/or when preparing for the FRCA (or similar) exams. It will also prove an invaluable, authoritative refresher for life-long learning and CPD. Related MCQs are included to test your understanding.

Core Topics in Vascular Anaesthesia

McGraw Hill Professional

Every anaesthetist reaches the end of their career with a collection of difficult airway experiences. Managing airway challenges relies on a combination of good clinical practice, knowledge of relevant basic sciences and critical evaluation of every aspect of airway care. This new edition of Core Topics in Airway Management provides any

trainee or consultant involved in airway techniques with practical, clinically relevant coverage of the core skills and knowledge required to manage airways in a wide variety of patients and clinical settings. All new procedures and equipment are reviewed, and detailed chapters advise on airway issues in a range of surgical procedures. This edition also contains a series of practical questions and answers, enabling the reader to evaluate their knowledge. Written by leading airway experts with decades of experience managing difficult airways, *Core Topics in Airway Management*, 2nd edition is an invaluable tool for anaesthetists, intensivists, and emergency physicians. [Core Topics in Obstetric Anaesthesia](#)  
Elsevier Health Sciences

This book covers all of the important elements of paediatric anaesthesia in a concise and structured manner. From the premature infant to the teenager, readers are guided through the complexities they may encounter, with key points at the end of each chapter to summarise the most important information. The common surgical conditions encountered in daily practice are covered along with comprehensive discussion of consent and the law, safeguarding children, and the complexity of drug dosing in the paediatric population. Other topics covered include trauma, burns, resuscitation, principles of intensive care, and transporting a sick child. Each chapter is written by an acknowledged expert in their field, sharing a wealth of

relevant, practical experience. Covering the whole curriculum necessary for advanced training, this is essential reading for trainees, general anaesthetists managing children in non-specialist hospitals and anyone aspiring to become a paediatric anaesthetist, as well as those established in the field. Cambridge University Press

This completely revised and updated edition of Key Topics in Anaesthesia contains essential information on over 100 major subjects pertinent to modern clinical practice in anaesthesia. The uniform, systematic structure of the text is designed to encourage a problem-based approach to clinical scenarios. The book is the ideal revision aid for trainee anaesthetists and a useful reference source for qualified anaesthetists.

Paediatric Anaesthesia: Prepare for the FRCA Cambridge University Press

Based on the Association of Anaesthetists of Great Britain and Ireland's (AAGBI) continuing education lecture series, this clinical-oriented book covers the latest developments in research and the clinical application to anesthesia and pain control.

**Basic and Advanced Sciences for Anaesthetic Practice: Prepare for the FRCA** Cambridge University Press

Most patients with critical cardiac or thoracic conditions will at some stage pass through the cardiothoracic critical care unit. Critical care presents more complex clinical data than any other area of medicine. The new edition of Core Topics in Cardiothoracic Critical Care focuses on the latest practise in the

management of patients in cardiothoracic intensive care. The practice of cardiothoracic critical care medicine is constantly evolving, and this new edition reflects the modernized learning styles for trainees. Each chapter includes key learning points as well as sample multiple choice questions and answers to assist in exam preparation. This edition also features updated chapters on ECMO, perioperative management of patients undergoing emergency cardiothoracic surgery, and advanced modes of organ support for patients. This text provides key knowledge in a concise and accessible manner for trainees, clinicians and consultants from specialties and disciplines such as cardiology and anaesthesia, and nursing and

physiotherapy.

*Pre-Hospital Emergency Medicine E-Book: Prepare for the FRCA* Cambridge University Press

This new addition to the highly successful Core Topics in Anaesthesia series provides a clinically relevant text for both trainees and consultants, covering the entire sub-specialty of obstetric anaesthesia. In-depth coverage of pregnancy-related physiology and pharmacology makes this book an excellent revision tool for basic science examinations. It is also a troubleshooting guide for anaesthetists when managing parturients suffering with concurrent medical conditions including obesity, sepsis, hypertensive, renal, respiratory, neurological, haematological and endocrine diseases. Chapters provide

recommended management plans for specific conditions such as HIV and neuropraxia following regional anaesthesia, and include algorithms to guide clinical decision-making. Guidance on the required infrastructure for setting up services such as antenatal clinics is also included. Experts in their fields have contributed sections including allergy testing and immunology, the immunocompromised parturient, and maternal collapse. This practical resource will serve as a survival guide for all those caring for parturients on the delivery suite.

A cutting edge and highly-illustrated  
guide to airway management for  
anaesthetists, intensivists, and  
emergency medicine physicians.

**Key Clinical Topics in Anaesthesia**

Elsevier Health Sciences

Core Topics in Endocrinology in

Anesthesia and Critical Care provides a

comprehensive, practical overview of the perioperative management of patients with endocrine disorders, giving clear diagnostic advice and management guidelines. This book considers the management of patients with endocrine disorders of the pituitary, thyroid, parathyroid and adrenal glands, including rarer disorders such as MEN syndrome. It then considers all aspects of the perioperative management of diabetic patients, including paediatric, obstetric and ambulatory patients. Finally it discusses endocrine disorders in the critically ill patient, covering such issues as the topical conundrum of glucose control and the management of diabetic metabolic acidosis, thyroid storm and myxoedema coma. Every chapter reviews the relevant anatomy

and pathophysiology and the latest developments in defining the genetic causes are also considered where appropriate. *Core Topics in Endocrinology in Anesthesia and Critical Care* is an invaluable tool for all anaesthetists and intensivists in their daily clinical practice.

*Core Topics in Airway Management*  
Cambridge University Press

Based on the Association of Anaesthetists of Great Britain and Ireland's continuing education lecture series for trainee and practicing anaesthetists, this book provides the most recent updates on research and clinical practice across all of anaesthetic practice.

*Core Topics in Airway Management*  
Cambridge University Press

Like other titles in the Core Topics series, this book provides an easy-to-read introduction to this important topic that will be of value to a wide spectrum of healthcare professionals including anaesthetists, intensivists, ODPs, theatre and recovery nurses. Concise but comprehensive chapters from experts in the field cover everything from basic anatomy, physiology and applied physics, through the various methods of maintaining the airway under anaesthesia (supraglottic devices, tracheal intubation, tubes/cuffs, endobronchial and double-lumen tubes) to the problem airway (obstruction by infection, tumour or a foreign body, ENT and maxillo-facial surgery, aspiration, obstetrics, trauma, cervical spine disease, intensive care, the 'lost' airway,

extubation and recovery), the paediatric airway, disinfection and cleaning of equipment and finally morbidity, mortality and medico-legal issues. 'Real' clinical scenarios, with patient management questions and model answers, are included throughout the book to bring to life some of the key problems encountered in day-to-day practice.

**Key Articles from the Anaesthesia  
and Intensive Care Medicine Journal**

Cambridge University Press

This eBook is one of 10 carefully selected collections of key articles from the Anaesthesia and Intensive Care Medicine journal - a continually updated, evidence-based learning resource, based on the RCOA Curriculum. It is ideal for trainees approaching a new sub-

specialty and/or when preparing for the FRCA (or similar) exams. It will also prove an invaluable, authoritative refresher for life-long learning and CPD. Related MCQs are included to test your understanding.

**Core Topics in General & Emergency Surgery** Cambridge University Press

Since the publication of the first edition of Core Topics in Cardiac Anaesthesia, the clinical landscape has undergone significant change. Recent developments include the increased use of electrophysiology, the resurgence of primary percutaneous intervention in acute coronary syndromes, the use of percutaneous devices in patients previously considered inoperable, and the withdrawal of aprotinin. Against this landscape, this invaluable resource has

been fully updated. New chapters are dedicated to right heart valves, pulmonary vascular disease, cardiac tumours and cardiac trauma. All other chapters have been updated according to the latest international guidelines.

Written and edited by an international author team with a wealth of expertise in all aspects of the perioperative care of cardiac patients, topics are presented in an easy to digest and a readily accessible manner. Core Topics in Cardiac Anaesthesia, Second Edition is essential reading for residents and fellows in anaesthesia and cardiac surgery and clinical perfusionists.
