Social Responsibility and Sustainability WHO Regional Office Europe

This book comprehensively describes social responsibility and sustainable development, with contributions from scientists and representatives from industry working in the field. The papers are innovative, cross-cutting and many share practice-based experiences, some of which may be replicable elsewhere. Prepared by the Inter-University Sustainable Development Research Programme (IUSDRP) and the World Sustainable Development Research and Transfer Centre (WSD-RTC), it reiterates the current need to promote social responsibility. Social responsibility and sustainable development are two different concepts, whose integration over the years has led to significant advances in the way enterprises see and perceive their operations. It is not only about policies or steps taken to meet legal requirements, but is also about social equality and environmental accountability, also bearing in mind the links with eco-efficiency, innovation, and the health and wellbeing of workers. According to ISO 26000, social responsibility is the

responsibility of an organisation for the impacts of its decisions and activities on society and the environment, through transparent and ethical behaviour that: a) contributes to sustainable development, including health and the welfare of society b) takes into account the expectations of stakeholders c) is in compliance with applicable law and consistent with international norms of behaviour d) is integrated throughout the organisation and practised in its relationships. But even though the relations between social responsibility and sustainability are strong, it is still necessary to encourage organisations to adhere to, or at least follow the principles of sustainable development in their operations, giving something back to the community. As such, there is a need for a better understanding of how social responsibility is related to sustainable development, and of the identification of processes, methods and tools that may help the integration of these two important elements. There is also a real need to showcase successful examples of how to structure behaviour and institutional practice in line with the sustainability challenges we face today. Chapter [Reviewing the Stakeholder Value Creation Literature: Towards a Sustainability Approach] is available open access under a Creative Commons Attribution 4.0 International License via link.springer.com.

An Analytical Study of Hindemith's Sonata for Solo Violoncello, Op. 25 Oxford University Press, USA
 In this book the author steers a simple and well-motivated path through the central ideas of real analysis.

Epidemiology Matters Springer Nature

This book is directed specifically to the public health official or epidemiologist who may need to plan or undertake an epidemiological study of populations exposed to chemicals through major accidents or environmental contamination. Realizing the potential contribution of epidemiology to the management of chemical incidents is an important step in creating an effective

multidisciplinary response.

[An Analytical Study of the Conditioned Knee-jerk](#) Cambridge University Press

An analytical investigation has been made to determine the dynamic longitudinal and lateral stability and response of the HL-10 entry vehicle with particular reference to low-speed, high-angle-of-attack conditions. The calculations were made for light and heavy wing loadings for both sea level altitude flight. The results indicate that the HL-10 vehicle was dynamically longitudinally and laterally stable for the conditions investigated but that artificial damping in pitch and roll was required for some conditions in order to achieve a satisfactory degree of stability based on military handling qualities specifications for piloted airplanes.

Analytical Study of Soft Landings on Gas-filled Bags Partridge Africa

This book covers a variety of smart IoT applications for industry and research. For industry, the book is a guide for considering the real-time aspects of automation of application domains. The main topics covered in the industry section include real-time tracking and navigation, smart transport systems and application for GPS domains, modern electric grid control for electricity industry, IoT prospectives for modern society, IoT for modern medical science, and IoT automation for Industry 4.0. The book then provides a summary of existing IoT research that underlines enabling technologies, such as fog computing, wireless sensor networks, data mining, context awareness, real-time analytics, virtual reality, and cellular communications. The book pertains to researchers, outcome-based academic leaders, as well as industry leaders.

Analytical Study of the Ogallala Aquifer in Hockley County, Texas Springer

The faking and forgery of works of art and antiquities is probably now more extensive than ever before. The frauds are aided by new technologies, from ink jet printers to epoxy resins, and driven by the astronomic prices realised on the global market. This book aims to provide a comprehensive survey of the subject over a wide range of materials, emphasising how the fakes and forgeries are produced and how they may be detected by technical and scientific examination. The subject is exemplified by numerous case studies, some turning out not to be as conclusive as is sometimes believed. The book is aimed at those likely to have a serious interest in these investigations, be they curator, collector, conservator or scientist. Paul Craddock has recently retired from the Department of Conservation, Documentation and Science at the British Museum, where he was a

materials scientist.

Projections of Saturated Thickness, Volume of Water in Storage, Pumpage Rates, Pumping Lifts, and Well Yields ASP / VUBPRESS / UPA

An Outline of the End Times is written by a layperson for laypeople. In an attempt to be comprehensive yet concise and thorough, PT Nicholson explores prophetic scripture in relation to the end times. He weighs up counterarguments of key issues that divide Christians regarding the tribulation and the millennium and carefully synthesizes an outline of events without overlooking difficulties. Combined with exhaustive scripture references, he uses charts, tables, maps, sketches, and graphs to explain issues and analyse topics as succinctly as possible. About 25 percent of the Bible is prophecy and, according to a well-known and respected scholar on Bible prophecy, John Walvoord, five hundred of one thousand prophetic events remain unfulfilled. Yet many Christians have only a vague notion of how end-time events will unfold due to inadequate teaching and a shortage of comprehensively researched books on the subject. An Outline of the End Times serves as a reference resource to help meet this need.

Epidemiology Matters offers a new approach to understanding and identifying the causes of disease -- and with it, how to prevent disease and improve human health. Utilizing visual explanations and examples, this text provides an accessible, step-by-step introduction to the fundamentals of epidemiologic study, from design to analysis. Across fourteen chapters, Epidemiology Matters teaches the individual competencies that underlie the conduct of an epidemiologic study: identifying populations; measuring exposures and health indicators; taking a sample; estimating associations between exposures and health indicators; assessing evidence for causes working together; assessing internal and external validity of results. With its consequentialist approach -- designing epidemiologic studies that aim to inform our understanding,

and therefore improve public health -- Epidemiology Matters is an introductory text for the next generation of students in medicine and public health.

With items from the 17th congress of the International Association of the History of Glass, this collection showcases the work of scholars from all over the world. In addition to numerous contributions on the use, manufacture, and trade of glass in the Antique period, the importance of glass in more recent historical periods is dealt with in detail. Finally, apart from contributions on stained glass, glass decoration, and the use of enameling, there is a substantial series of papers on the chemical analysis of glass.

How Businesses and Organizations Can Operate in a Sustainable and Socially Responsible Way

This book presents articles from The Australasian Conference on the Mechanics of Structures and Materials (ACMSM25 held in Brisbane, December 2018), celebrating the 50th anniversary of the conference. First held in Sydney in 1967, it is one of the longest running conferences of its kind, taking place every 2-3 years in Australia or New Zealand. Bringing together international experts and leaders to disseminate recent research findings in the fields of structural mechanics, civil engineering and materials, it offers a forum for participants from around the world to review, discuss and present the latest developments in the broad discipline of mechanics and materials in civil engineering.
