Over the last few years, financial statement scandals, cases of fraud and corruption, data protection violations, and other legal violations have led to numerous liability cases, damages claims, and

losses of reputation. As a reaction to these developments, several regulations have been issued: Corporate Governance, the Sarbanes-Oxley Act, IFRS, Basel II and III, Solvency II and BilMoG, to name just a few. In this book, compliance is understood as the process, mapped not only in an internal control system, that is intended to guarantee conformity with legal requirements but also with internal policies and enterprise objectives (in particular, efficiency and profitability). The current literature primarily confines itself to mapping controls in SAP ERP and auditing SAP systems. Maxim Chuprunov not only addresses this subject but extends the aim of internal controls from legal compliance to include efficiency and profitability and then well beyond, because a basic understanding of the processes involved in IT-supported compliance management processes are not delivered along with the software. Starting with the requirements for compliance (Part I), he not only answers compliance-relevant questions in the form of an audit guide for an SAP ERP system and in the form of risks and control descriptions (Part II), but also shows how to automate the compliance management process based on SAP GRC (Part III). He thus addresses the current need for solutions for implementing an integrated GRC system in an organization, especially focusing on the continuous control monitoring topics. Maxim Chuprunov mainly targets compliance experts, auditors, SAP project managers and consultants responsible for GRC products as readers for his book. They will find indispensable information for their daily work from the first to the last page. In addition, MBA, management information system students as well as senior managers like CIOs and CFOs will find a wealth of valuable information on compliance in the SAP ERP environment, on GRC in general and its implementation in particular.

Implementing SAP Governance, Risk, and Compliance McGraw-Hill/Irwin

There are two questions often asked of risk communication: what has been learned from past work, and what is needed to push the field forward? Drawing on the experience of leading risk researchers and practitioners, *Effective Risk Communication* focuses on answering these questions. The book draws together new examples of research and practice from contexts as diverse as energy generation, human health, nuclear waste, climate change, food choice, and social media. This book treats risk communication as much more than the interchange of risk information between experts and non-experts; rather, it aims to emphasise the diversity in viewpoints and practices. In each specially commissioned chapter, the authors reflect on the theoretical and applied underpinnings of their best projects and comment on how their approach could be used effectively by others. Building upon each other, the chapters will provoke new discussion and action around a discipline which many feel is neither meeting important needs in practice, nor living up to its potential in research. Through a more careful examination of the work already done in risk communication, the book will help develop better, more reflective practice for the future.

Introduction to Logic combines likely the broadest scope of any logic textbook available with clear, concise writing and interesting examples and arguments. Its key features, all retained in the Second Edition, include: • simpler ways to test arguments than those available in competing textbooks, including the star test for syllogisms • a wide scope of materials, making it suitable for introductory logic courses (as the primary text) or intermediate classes (as the primary or supplementary book) •

engaging and easy-to-understand examples and arguments, drawn from everyday life as well as from the great philosophers • a suitability for self-study and for preparation for standardized tests, like the LSAT • a reasonable price (a third of the cost of many competitors) • exercises that correspond to the LogiCola program, which may be downloaded for free from the web. This Second Edition also: • arranges chapters in a more useful way for students, starting with the easiest material and then gradually increasing in difficulty • provides an even broader scope with new chapters on the history of logic, deviant logic, and the philosophy of logic • expands the section on informal fallacies • includes a more exhaustive index and a new appendix on suggested further readings • updates the LogiCola instructional program, which is now more visually attractive as well as easier to download, install, update, and use.

M: Business Communication was created with students' and professors' needs in mind. M: Business Communication attends to the dynamic, fast-paced, and ever-changing means by which business communication occurs by being the most technologically current and pedagogically effective book in the field. It has realistic examples that are both consumer- and business-oriented. Students receive a cost-effective, easy to read, focused text complete with study resources (both print and online) to help them review for tests and apply chapter concepts. Professors receive a text that contains all the pertinent information - yet in a more condensed format that is easier to cover by students. Student friendly design - M: Business Communication was written and designed with today's student reader in mind. The layout and design provides student visual stimulation they've come to expect. The content was written to focus on the key concepts only. The examples provided have been selected for greater student appeal. The writing style is highly readable with today's student reader in mind. ALL END OF CHAPTER MATERIAL IS LOCATED ONLINE ON THE OLC. Study/Prep Cards: these Study Cards are come bound in to each new book. There is 1 Study Card for each chapter. They do not regurgitate information from the text, which allows students to use the card passively. Instead, the front of the card asks the student to write what he/she recalls from each of the learning objectives in the chapter. After completing this step, the student turns to the back to review the learning objectives broken down into bulleted lists, and then completes fill-in-the-blank application questions to test their knowledge beyond basic comprehension. The answers to these application questions are available on the bottom of the card (upside down). The point of these cards is to create useful exercises that actually help students LEARN and remember, as opposed to passively reading (or not reading) the cards.
