Load Balancing Using Pcc Routeros  
 Understanding the PCC Load Balancing Solution •PCC takes selected fields from IP header, and with the help of a hashing algorithm converts selected fields into 32-bit value. •This value then is divided by a Denominator and the Remainder then is compared to a specified Remainder, if equal then packet will be captured.  
 Load Balancing Using PCC & RouterOS - MikroTik  
 MikroTik Dual WAN Load Balancing and Link Redundancy using PCC have been discussed in this article from very beginning. I hope you will now be able to configure a 100% reliable Load Balancing and Link Redundancy network with your MikroTik Router using PCC method.  
 MikroTik Dual WAN Load Balancing with Failover using PCC ...RouterOS's load balancing is simple but tricky. Even Mikrotik shows an example of how to configure PCC for load balancing. It does not say how to implement it with dynamic IP. The method introduced here is simple. We will add lease scripts to WAN1 and WAN2.  
 Easy Dual WAN Load Balancing with MikroTik RouterOS PCC  
 Load balancing using PCC & RouterOS Load balancing over multiple ISP using Mikrotik and PCC. The safe way of doing load balancing. Cristian Livadaru I was facing the problem that I needed to connect a Mikrotik to the internet over two 3G/LTE from two different providers. Splitting traffic based on protocol (SMTP, IMAP, HTTP, HTTPS) would be one ...Load balancing using PCC & RouterOSIt can be used to accomplish

load-balancing with the option of automatic fail-over in a dual ISP connection. In this post, I will share with us on how to configure load balancing on a Mikrotik router, using the Mikrotik PCC features.  
 How to Setup Load Balancing On Mikrotik Router Using The ...To configure a PCC load balancing and link redundancy network with PPPoE Server, I am using MikroTik RouterOS v6.38.1 which has two ISP connections available. IP information that I am using for this network configuration are given below.  
 MikroTik Dual WAN PCC Load Balancing with PPPoE Server ...This is my ongoing work at using multiple ADSL services and the Mikrotik PCC rules along with some inbound mangling to allow a single router to load balance traffic across as many non bonded links as required.  
 Using PCC to load balance across multiple non bonded links ...PCC is available in RouterOS since v3.24. This option was introduced to address configuration issues with load balancing over multiple gateways with masquerade  
 Previous configurations: ECMP load balancing with masquerade; NTH load balancing with masquerade; NTH load balancing with masquerade (another approach)  
 Manual:PCC - MikroTik Wiki  
 How to Setup Load Balancing using PCC on Mikrotik ... Load Balancing is a technique used to send network traffic over multiple gateways. ... In this tutorial I am explaining how to create a Load ...

site - MikroTik-RouterOS.com Load Balance using PCC method in mikrotik ... RouterOS you are using version 4.5 because the PCC has become a popular feature at the 3:24 version. ... Load Balance using the PCC is not forever and entirely a solution that would work well in all types of networks, because the process of balancing the traffic is based on the logic of probability. ...step technology how to: Load Balance using PCC method in ...PCC is a feature in Mikrotik routerOS that allows traffics to be divided into equal streams of packets, giving administrators the ability to identify and keep specific traffics restricted to a predefined connection. It can be used to accomplish load-balancing with the option of automatic fail-over in a dual ISP connection. How to configure load balancing of Mikrotik routers using ... This post illustrates on how you can configure load balancing of multiple wan links using Mikrotik Routerboard hardware (or RouterOS x86 version). In this example I have used Mikrotik Routerboard CCR 1036 model. Don't forget to rename the interface names accordingly if you are a copy paste fan 2 ports were connected with two difference DSL Routers, and 3rd port was connected with User LAN. Mikrotik DUAL WAN Load Balancing using PCC method ... RouterOS supports load balancing algorithm that could work on connection-mark (example: PCC - per connection classifier) or packet-mark (example: nth). Because NAT is applied, we gonna use connection-mark with source-ip-address as classifier. This means each IP address on LAN will be mapped into existing outgoing connections. This is my ongoing work at using multiple ADSL services and the Mikrotik PCC rules along with some inbound mangling to allow a single router to load balance traffic across as many non bonded links as required.

#### MikroTik Dual WAN PCC Load Balancing with PPPoE Server ...

Introduction. Load Balancing is a method aiming to spread traffic across multiple links to get better link usage. This can be done one per-packet or per-connection basis.

#### **step technology how to: Load Balance using PCC method in ...**

PCC is available in RouterOS since v3.24. This option was introduced to address configuration issues with load balancing over multiple gateways with masquerade Previous configurations: ECMP load balancing with masquerade; NTH load balancing with masquerade; NTH load balancing with masquerade (another approach)
