Aerospace Engineering is an interdisciplinary field of engineering that combines the principles of fluid mechanics, materials science, structural engineering, etc. to design and develop space crafts and aircrafts. The discipline further bifurcates into two major branches namely aeronautical engineering and astronautical engineering. While aeronautical engineering deals with creating aircrafts, astronautical engineering focuses on space technology to build rocket-ships and satellites. Avionics is another branch of aerospace engineering which is concerned with the electrical aspects of the subject. Modern disciplines like computational fluid dynamics which uses the techniques of CAD and CAM along with finite numerical analysis are also being extensively used by upcoming engineers to reduce the cost and increase the efficiency of the designing process, making it an indispensable part of the aerospace engineering. This book is a compilation of chapters that discuss the most vital concepts in the field of aerospace engineering. Most of the topics introduced in this book cover new techniques and the applications of aerospace engineering. Those in search of information to further their knowledge will be greatly assisted by this book.

Mitsubishi's 4G63t engine is among the most powerful engines ever in the sport-compact world. It's not uncommon to find one of these four-cylinder, iron-block, aluminum-headed, 2-liter turbocharged monsters making more than 1,000 horsepower with the right modifications and tuning - well above the 200-300 hp produced in the factory-made engines. Bolted into such cars as the Mitsubishi Lancer Evolution, Eclipse, and Galant, and the Eagle Talon and Plymouth Laser, the 4G63t has more than a cult following among sport-compact enthusiasts, who know and respect this engine's immense performance potential at the track or on the street. Up until now, in-depth performance information on the 4G63t has been hard to find. For this book, author Robert Bowen went straight to the source, Robert Garcia of Road/Race Engineering in Santa Fe Springs, California. RRE is the most well-known and respected Mitsubishi turbo performance shop in the United States, and Garcia is its in-house engine builder. Mitsubishi enthusiasts will benefit from Garcia's expertise and be able to build better, stronger engines than ever before. "How to Build Max-Performance Mitsubishi 4G63t Engines" covers every system and component of the engine, including the turbocharger system and engine management. More than just a collection of tips and tricks, this book includes a complete history of the engine and its evolution, an identification guide, and advice for choosing engine components and other parts. Profiles of successful built-up engines show the reader examples of what works, and the book includes helpful guidance for choosing your own engine building path.

The eyes initiate and control most motor behavior. Working with the relationship of the eyes to the rest of the body can be a powerful means to improve physical organization and functioning. Jack Heggie combines the theory and practice of "Awareness Through Movement"(r) with the vision improvement of Dr. William Bates and has developed 13 "Awareness Through Movement" vision exercises which reduce eye strain and improve posture, flexibility and visual acuity.

Thrilling, heartbreaking, and, at times, absurdly funny, The Last Resort is a remarkable true story about one family in a country under siege and a testament to the love, perseverance, and resilience of the human spirit. Born and raised in Zimbabwe, Douglas Rogers is the son of white farmers living through that country's long and tense transition from postcolonial rule. He escaped the dull future mapped out for him by his parents for one of adventure and excitement in Europe and the United States. But when Zimbabwe's president Robert Mugabe launched his violent program to reclaim white-owned land and Rogers's parents were caught in the cross fire, everything changed. Lyn and Ros, the owners of Drifters—a famous game farm and backpacker lodge in the eastern mountains that was one of the most popular budget resorts in the country—found their home and resort under siege, their friends and neighbors expelled, and their lives in danger. But instead of leaving, as their son pleads with them to do, they haul out a shotgun and decide to stay. On returning to the country of his birth, Rogers finds his once orderly and progressive home transformed into something resembling a Marx Brothers romp crossed with Heart of Darkness: pot has supplanted maize in the fields; hookers have replaced college kids as

guests; and soldiers, spies, and teenage diamond dealers guzzle beer at the bar. And yet, in spite of it all, Rogers's parents—with the help of friends, farmworkers, lodge guests, and residents—among them black political dissidents and white refugee farmers—continue to hold on. But can they survive to the end? In the midst of a nation stuck between its stubborn past and an impatient future, Rogers soon begins to see his parents in a new light: unbowed, with passions and purpose renewed, even heroic. And, in the process, he learns that the "big story" he had relentlessly pursued his entire adult life as a roving journalist and travel writer was actually happening in his own backyard. Evoking elements of The Tender Bar and Absurdistan, The Last Resort is an inspiring, coming-of-age tale about home, love, hope, responsibility, and redemption. An edgy, roller-coaster adventure, it is also a deeply moving story about how to survive a corrupt Third World dictatorship with a little innovation, humor, bribery, and brothel management.

Plant Hazard Analysis and Safety Instrumentation Systems is the first book to combine coverage of these two integral aspects of running a chemical processing plant. It helps engineers from various disciplines learn how various analysis techniques, international standards, and instrumentation and controls provide layers of protection for basic process control systems, and how, as a result, overall system reliability, availability, dependability, and maintainability can be increased. This step-by-step guide takes readers through the development of safety instrumented systems, also including discussions on cost impact, basics of statistics, and reliability. Swapan Basu brings more than 35 years of industrial experience to this book, using practical examples to demonstrate concepts. Basu links between the SIS requirements and process hazard analysis in order to complete SIS lifecycle implementation and covers safety analysis and realization in control systems, with up-to-date descriptions of modern concepts, such as SIL, SIS, and Fault Tolerance to name a few. In addition, the book addresses security issues that are particularly important for the programmable systems in modern plants, and discusses, at length, hazardous atmospheres and their impact on electrical enclosures and the use of IS circuits. - Helps the reader identify which hazard analysis method is the most appropriate (covers ALARP, HAZOP, FMEA, LOPA) - Provides tactics on how to implement standards, such as IEC 61508/61511 and ANSI/ISA 84 - Presents information on how to conduct safety analysis and realization in control systems and safety instrumentation

“Eric Wiberg's ability, to unearth obscure historical facts, keeps me in a constant state of surprise. I commend his relentless determination to verify every detail, with local sources in Nassau's historical community, for corroboration of his findings.”—Capt. Paul C. Aranha, author, THE ISLAND AIRMAN . . . AND HIS BAHAMA ISLANDS HOME. “Eric Wiberg has made a significant contribution to the bibliography of World War II history.” —J. Revell Carr, Santa Fe, N.M. This his book tells one more key part of the big story and is one more piece in the giant puzzle of the history of World War II. Its value for historians cannot be underestimated. Throughout the stories of the attacks by German and Italian submarines on Allied shipping in the water around the Bahamas and the Turks and Caicos, several consistent themes emerge in Wiberg's thorough accounts. Prime among them is the heroism of the merchant mariners who time and again put themselves in danger as they performed the critical task of moving supplies, military and civilian, which were vital to ultimate victory. We read of numerous instances of sailors having their ships shot out from under them and then continuously going back to sea and having additional ships torpedoed and sunk. We can also recognize what we know today as Post Traumatic Stress Disorder (PTSD), which was seldom recognized 75 years ago.
