Great White Sharks Turtleback

Kwan Wilson was a high school basketball star living in San Diego when a tragic accident changed his life in ways no one could predict. He only looked at his phone for a few seconds, but that was all the time it took to crash his car into a telephone pole, the impact killing his mother while severing his spinal cord and paralyzing him from the waist down. After the accident his father, Admiral Douglas Wilson, sends him away to live

with his maternal grandmother in South Florida. Kwan's new principal, anticipating his depression and isolation, tells him about an internship working at a genetics lab in Miami that's testing shark stem cells on rats in an effort to cure cancer and repair spinal injuries. Kwan declines—until he learns the beautiful Anya Patel is an intern at the lab. The good news is that the stem cells are curing their rat subjects; the bad news is it alters their DNA so much it kills them. When a promising breakthrough is made, Kwan risks his life and injects himself with the experimental stem cells—altering his

destiny and the lives of millions in the process.

Megalodon Megalodon

Longer than a school bus and weighing more than 22 elephants, Megalodon was a truly enormous and powerful prehistoric predator. This ancient ancestor of today's most feared ocean predator, the shark, would have hunted whales and been able to snap up a great white shark as a snack! In this book, readers get to dive into the world of a prehistoric ocean giant and find out how scientists have used fossils and studies of modern-day sharks to look back millions of years and piece together the story of Megalodon.

Dinosaur Planet A and M Publishing LLC
Internationally bestselling author and renowned scientist Tim Flannery and his

daughter, scientist Emma Flannery, delivers an informative-yet-intimate portrait of the megalodon, an extinct shark and the largest predator of all time. When Tim Flannery was a boy he found a fossilized tooth of the giant shark megalodon at a beach near his home in Australia. This remarkable find—the tooth was large enough to cover his palm—sparked an interest in paleontology that was to inform his life’s work and a lifelong quest to uncover the secrets of the great shark *Otodus megalodon*. Tim passed on his love of the natural world and interest in the fossil record to his daughter, Emma, a scientist and writer. And now, together, they have written a fascinating account of this ancient marine creature. *Big Meg* charts the evolution of megalodon, its

super-predator status for about fifteen million years and its decline and extinction. It delves into the fossil record to answer questions about its behavior and role in shaping marine ecosystems as well as its impact on the human psyche. It contains stories of the scientist and amateur fossil hunters who have scoured the seas, and land, for fossil remains, drawn to the beauty and mystique of the great shark, sometimes meeting their death in the process. Deemed “in the league of the all-time great explorers” by David Attenborough, Tim Flannery has come together with Emma Flannery to spin a story of the great natural history of our planet as enthralling as the fossil record itself. **Meet the Megalodon ebook** Tor Books
In this fifth installment of Steve Alten's

New York Times bestselling MEG series--the basis for the feature film *The Meg*, starring Jason Statham as Jonas Taylor--*Nightstalkers* picks up where *MEG: Hell's Aquarium* left off. Bela and Lizzy, the dominant Megalodon siblings from Angel's brood, have escaped the Tanaka Institute to roam the Salish Sea in British Columbia. While Jonas Taylor and his friend Mac attempt to either recapture or kill the "sisters," Jonas's son, David, embarks on his own adventure, motivated by revenge. Having witnessed his girlfriend's gruesome death, David has joined a Dubai Prince's ocean expedition, tracking the 120-foot, hundred-ton Liopleurodon that escaped from the Panthalassa Sea. Haunted by night terrors, David repeatedly risks his life to lure the Lio and other prehistoric

sea creatures into the fleet's nets, while battling his own suicidal demons. Steve Alten weaves these storylines together in a page-turning thriller that culminates in a final showdown between the most dangerous predators ever to inhabit the planet. TV scientist Prof Ben Garrod presents the biggest extinction events ever, told from the point of view of evolution's superstars, the most incredible animals ever to swim, stalk, slither or walk our planet. Whether you're 9 or 90, his unique exploration of the most destructive, yet most creative, force in nature makes top level science fun. Here are the superstars of the story of life, from the super-weird to the super-ferocious. Usually a species has 10 million years or so of evolving, eating, chasing, playing, maybe doing homework, or even going to the moon before it goes extinct. Megalodon, the super-predator, had the most powerful bite force ever measured! Terrorising the oceans, it hunted with stealth and skill, but even Megalodon died out, along with

50 percent of marine mammals, 2.5 million years ago. Find out why! 'An accessible, beautifully illustrated book that covers millions of years of natural history by focusing on one particularly deadly predator... I am intrigued to read the other books in the series' LoveReading Collect all eight books about animals we have lost in mass extinctions caused by asteroids or megavolcanoes, clashing continents and climate change. After a top-secret dive into the Pacific Ocean's deepest canyon, Jonas Taylor insists that the prehistoric shark known as Carcharodon megalodon still swims there.

Megalodon Teacher Created Materials

Between two and twenty-six million years ago the state of Florida and surrounding waters went through major changes. Florida used to be twice the size it is now and, at other times, half its current size. During these fluctuations land and sea animals were prevalent, living and dying. There are fossil beads all over world, but nothing quite like Venice, Florida. All sorts of fossilized material can be found diving off the coast, but none are more sought after than shark teeth, especially the 'Meg' tooth. Meg is short for Carcharocles megalodon, the biggest shark to ever roam the oceans. Extinct now, their teeth can still be found all over the world, and you can dive for them right off the beaches of Venice, Florida, the Shark Tooth Capitol of the World! This

book is about one man's fascination as a young boy with science and Earth's history, to eventually diving and finding his own meg teeth!

----- Imagine a
ferocious marine hunter up to twenty
metres long, weighing twice as much as
a humpback whale and ten times more
than Tyrannosaurus rex. With jaws that
can open two metres wide, crammed
with 276 serrated fangs, it can bite down
with the greatest force of any animal
that has ever lived. This is the
Megalodon, also known as 'the Bigtooth',
and it swam in our waters three million
years ago. Compared with the dinosaurs,
wiped out 66 million years ago, this is
but a stone's throw into our planet's
shadowy past when monsters reigned.
Yet the Megalodon has been largely
absent from the fossil record, leaving
behind only a smattering of teeth and

vertebrae prized by collectors, its
existence steeped in mystery... until
now. Marking a milestone in
palaeontology, Tim Flannery, celebrated
environmentalist, zoologist and explorer,
and his scientist daughter Emma, tell the
story of the giant shark for the first time.
Big Meg follows the quest to demystify
the colossus that left Earth with barely a
trace, reveals where and how it lived,
and discusses the theories and haunting
stories surrounding this ancient
legendary creature, including that it may
still stalk the deep... This is the
biography of the ultimate apex predator
- a vital piece of the great natural history
of our planet - and a compelling
exploration of its awesome grip on the
human imagination today.

Master of suspense Steve Alten always takes readers to the edge with his non-stop, adrenaline-charged novels. Just in time for the movie, this new edition of his New York Times and USA Today bestselling sequel to MEG shows just how deep fear can run when you don't know what lurks beneath the surface... Its appetite is ravenous. Its teeth,

scalpel-sharp. For the first time, the captive 20-ton Megalodon shark has tasted human blood, and it wants more... On the other side of the world, in the silent depths of the ocean, lies the Marianas Trench, where the Megalodon has spawned since the dawn of time. Paleobiologist Jonas Taylor once dared to enter this perilous cavern. He alone faced a Megalodon shark and cut its heart out. Now, as the body count rises and the horror of a monster's attack grips the California coast, Jonas must begin the hunt again, and return to the waking nightmare of...
