Technical Analysis of the Currency Market John Wiley & Sons

This book can be described as 1/3 trading psychology, 1/3 risk management and 1/3 technical analysis. My early days of trading were filled with frustration, confusion and constant losses. After making some of the same mistakes over and over again I being to adapt and learned a few tricks to minimize my losses. As I began passing these tricks on to my fellow traders through my twitter account and blog (chedstrading.blogspot.com) it launched me on a path of learning and teaching. With enough time that path lead to dedicated studies of Japanese candlesticks and classical charting, and ultimately CMT certification. My career and brand have been built on "helping new traders avoid my old mistakes", and this book is a natural extension of those efforts. This book is also a natural

extension of my "Complete Beginners Guide to Trading" that I wrote back in 2017 when I was undergoing chemotherapy for lymphoma. I subsequently beat my cancer and wrote a book about that experience, and have since continued to grow in my journey as a trader and teacher. Building on my years of work with my twitter account, learning blog and various other writings on trading subjects, I am happy to now bring together in one place all those bits and pieces that have helped to make me a successful trader. I have personally made every single mistake mentioned in this book multiple times and therefore can speak from the heart, which I hope makes each lesson a little bit easier to learn. Thank you for reading and best of luck in your trading journey.

This book has everything you need: An introduction to candlestick chart patterns and why they can take your trading to the next level 30+ detailed candlestick patterns with a historical example for every chart Exit and entry suggestions Candlestick chart pattern trading tips Real trading examples from TrendSpider From the book: HOW TO READ CANDLESTICK CHARTS A candlestick is a type of chart used in trading as a visual representation of past and current price action in specified time frames. Depending on the time frame of the chart, each candlestick consists of minutes, a day, a week or a month trading range. On an intraday chart, a candle might represent periods of time like 1-minute, 5-minutes, 15-minutes or one hour. A daily shows candles that represent each day's trading range. A weekly chart shows candles that represent each week's trading range. A monthly chart shows candles that represent each month's trading range.

Note that during the day, a daily candle will change as the range changes and price reaches a final, closing price. Similarly, during the week and in the middle of the month, the candles in those time frames are still changing and are not finalized until their time frame closes. At the end of the day, week or month, the candle for that time period is finalized. A candlestick consists of the body with an upper or lower wick or shadow. Most candlestick charts show a higher close than the open as either a green or white candle. The opening price as the bottom of the candle and the closing price as the high of the candle. Also, most candlestick charts show a lower close than the open represented as a red or black candle, with the opening price as the top of the candle body and the closing price as the low of the candle body. ...and much more! By the time you finish this book, I think you'll agree that candlesticks are the best type of charts for most traders to use for trading price action patterns.
