 The routine jobs of yesterday are being replaced by technology and/or shipped off-shore. In their place, job categories that require knowledge management, abstract reasoning, and personal services seem to be growing. The modern workplace requires workers to have broad cognitive and affective skills. Often referred to as "21st century skills," these skills include being able to solve complex problems, to think critically about tasks, to

effectively communicate with people from a variety of different cultures and using a variety of different techniques, to work in collaboration with others, to adapt to rapidly changing environments and conditions for performing tasks, to effectively manage one's work, and to acquire new skills and information on one's own. The National Research Council (NRC) has convened two prior workshops on the topic of 21st century skills. The first, held in 2007, was designed to examine research on the skills required for the 21st century workplace and the extent to which they are meaningfully different from earlier eras and require corresponding changes in educational experiences. The second workshop, held in 2009, was designed to explore demand for these types of skills, consider intersections between science education reform goals and 21st century skills, examine models of high-quality science instruction that may develop the skills, and consider science teacher readiness for 21st century skills. The third workshop was intended to delve more deeply into the topic of assessment. The goal for this workshop was to capitalize on the prior efforts and explore strategies for assessing the five skills identified earlier. The Committee on the Assessment of 21st Century Skills was asked to organize a workshop that reviewed the assessments and related research for each of the five skills identified at the previous workshops, with special attention to recent developments in technology-enabled assessment of critical thinking and problem-solving skills. In designing the workshop, the committee collapsed the five skills into three broad clusters as shown below: Cognitive skills: nonroutine problem solving, critical thinking, systems thinking Interpersonal skills: complex communication, social skills, team-work, cultural sensitivity, dealing with diversity Intrapersonal skills: self-management, time management, self-development, self-regulation, adaptability, executive functioning Assessing 21st Century Skills provides an integrated summary of the presentations and discussions from both parts of the third workshop.

Rockets : an educator's guide with activities in science, mathematics, and technology. Nelson Thornes

The Sutherland Inquiry, (HCP 62, session 2008-09, ISBN 9780102958393), is an independent inquiry remitted by the Office of the Qualifications and Examinations Regulator (Ofqual) and the Secretary of State for Children, Schools and Families, into the delivery of the National Curriculum tests in 2008. In July 2008, 1.2 million pupils heard that their National Curriculum test results would be delayed. The test delivery service represented a failure in customer delivery service, to the pupils, schools and also the markers upon whom the National Curriculum testing regime relies. The primary responsibility must therefore rest with the American organisation, ETS Global BV (ETS), which won the public contract to deliver the tests and failed its customers. This report examines how this organisation secured the contract, what its plans were, and why its systems and process as a whole were not properly tested. The report will also describe how ETS's systems failed during the test delivery process. There was also a failure on the part of the Government's Non-Departmental Public Body, the Qualifications and Curriculum Authority to deliver its remit. The report also sets out the procurement process that QCA used to select its delivery supplier, ETS, and how it managed the contract. The report sets out a number of recommendations on how test delivery can improve in future years, and has set out a number of key priorities, including: that the delivery process of the National Curriculum tests should be modernised and improved, in consultation with the marking community, including piloting online marking; that whatever process is used should be thoroughly piloted and project managed to ensure schools and pupils get their results on time; that the customer service provided to markers must be vastly improved to ensure that they are properly supported and are able to access up-to-date information.
