DENISSE JAMARI

The Temporary Society CRC Press
The volume collects papers presented at the International Conference "Greek

Medical Papyri - Text, Context, Hypertext" held at the University of Parma on November 2-4, 2016, as the final event of the ERC project DIGMEDTEXT, aimed primarily at creating an online textual database of the Greek papyri dealing with medicine.

The contributions, authored by outstanding papyrologists and historians of the ancient medicine, deal with a variety of topics focused on the papyrological evidence of ancient medical texts and contexts. The first part, devoted to "medical texts", contains some new reflections on important sources such as the Anonymus Londinensis and the Hippocratic corpus, as well as on specific themes like the pharmacological vocabulary, the official medical reports, the medical care in the Roman army. The second part collects papers about the "doctors' context", providing highlights from broader viewpoints like the analysis of the writing supports, the study of the ostraka from the Eastern Desert, the evidence of inscriptions and

philosophical texts. The third part is entirely focused on the DIGMEDTEXT project itself: the team members present some relevant key issues raised by the digitisation of the medical papyri.

Food Allergy: Molecular Basis and Clinical Practice Jossey-Bass

The thesis of this original and provocative book is that representative government should be understood as a combination of democratic and undemocratic, aristocratic elements. Professor Manin challenges the conventional view that representative democracy is no more than an indirect form of government by the people, in which citizens elect representatives only

because they cannot assemble and govern in person. The argument is developed by examining the historical moments when the present institutional arrangements were chosen from among the then available alternatives. Professor Manin reminds us that while today representative institutions and democracy appear as virtually indistinguishable, when representative government was first established in Europe and America, it was designed in opposition to democracy proper. Drawing on the procedures used in earlier republican systems, from classical Athens to Renaissance Florence, in order to highlight the alternatives that were forsaken, Manin brings to the fore the generally overlooked results of representative

mechanisms. These include the elitist aspect of elections and the non-binding character of campaign promises.

Ancient Greeks West and East

Cambridge University Press

The main purpose of this etymological dictionary is to trace each Spanish word as far back as possible in order to acquaint the reader with the history of the evolution of the Spanish language; another of its aims is to help students learn vocabulary, e.g., the English word 'sky' does not help English speaking persons learn the Spanish work 'cielo' but the English word 'celestial' does. Etymology is the history of words, and, as words stand for things, it is also the history of things, and therefore of civilisation. The words analyzed in this dictionary cover every area of human

endeavor, including science and technology; in addition to words, the book contains certain phrases, and many affixes. Although some Spanish words are not of Indo-European origin, most of them are. In view of the proportion of words with similar etymologies in certain languages, this Spanish etymological dictionary can also be used to find the origin of thousands of English, French, Italian and Portuguese words as well as that of many words from other languages. Many Indo-European roots are represented in Spanish words and therefore this dictionary forms a complete picture of Indo-European etymology. This etymological dictionary is of great value to all those working with, or interested in, the Spanish language. As a reference work it should

be on the shelves of school, university and general public libraries as well as other appropriate reference libraries. It is of particular value to students and teachers of Spanish and to translators and conference interpreters.

Allergens and Allergen Immunotherapy

Walter de Gruyter GmbH & Co KG

This book equips readers with the knowledge required to improve diagnosis and treatment and to implement integrated prevention programs in patients with eating and weight disorders. It does so by providing a comprehensive, up-to-date review of research findings and theoretical assumptions concerning the interface and interactions between body image and such disorders as anorexia nervosa, bulimia nervosa, binge eating disorder,

other specified feeding and eating disorders, orthorexia nervosa, overweight, and obesity. After consideration of issues of definition and classification, the opening part of the book examines the concept of body image from a variety of viewpoints. A series of chapters are then devoted to the assessment of the multidimensional construct “body image”, to dysmorphophobia/body dysmorphic disorder, and to muscle dysmorphia. The third part discusses body image in people suffering from different eating disorders and/or overweight or obesity, and two final chapters focus on body image in the integrated prevention of eating disorders and obesity, and cultural differences regarding body image. The book will be of interest to all

health professionals who work in the fields of psychiatry, clinical psychology, eating disorders, obesity, body image, adolescence, public health, and prevention.

Todd Saunders - Architecture in Northern Landscapes CRC Press

Makeshift implies a temporary or expedient substitute for something else, something missing. Make-Shift City extends the term to embrace urban design strategies. "Make-Shift City" implies a condition of insecurity: the inconstant, the imperfect and the indeterminate. It also implies the designing act of shifting or reinterpretation as a form of urban détournement. Austerity urbanism and the increasing scarcity of resources among the cities and boroughs of Europe

in particular has far-reaching consequences for civic space. Where there is a lack of regular planning processes, gaps arise as open spaces that enable an ad-hoc informal urban design. What often results is a process of urban commoning: the renegotiation of shared spaces and shared resources. This urbanism of small acts is an emancipatory practice; a re-imagining of the city space and its potentialities.

Greek Medical Papyri CRC Press

This massive reference thoroughly analyzes the mechanisms implicated in the pathophysiology of asthma, such as T helper lymphocyte subsets, and the consequences of various extrinsic and intrinsic factors, and IgE receptor expression—reviewing current concepts in immunotherapeutic approaches for the

treatment of this and other allergic diseases. Investigates the only category of treatment showing the potential to affect the natural course of allergic diseases and prevent the onset of asthma. Written by more than 80 internationally renowned pulmonary experts, allergic disease specialists, and basic researchers, *Immunotherapy in Asthma* discusses the efficacy of new medications, examines the role of metachromatic cells, lymphocytes, macrophages, and other cell types present in bronchial biopsies, presents basic topics such as the functional and phenotypic properties of Th1 and Th2 cells and their role in allergic disease and the regulation of IgE-mediated inflammatory responses, and addresses the deleterious effects of smoking and

passive exposure to cigarette smoke in children and adults assesses differences and similarities between intrinsic and antigen-induced asthma describes the effects of immunogenic peptides on the cytokine production profile of allergen-specific CD4+ T cells explains the different clinical aspects of allergic responses, such as bronchial hyperreactivity and eosinophilic inflammation of the airways reviews the genetic basis of allergy, as well as risk factors for asthma explores oral, sublingual, local nasal, and local bronchial routes for noninjective immunotherapies evaluates various agents with modulatory effects on normal and pathogenic immune responses focuses on strategies for the prevention of childhood asthma and

more! Containing over 3000 references, drawings, and tables, *Immunotherapy in Asthma* is an indispensable resource for pulmonologists, immunologists, allergists, and medical school students in these disciplines.

Food Allergy Springer Science & Business Media

"The Ancient Economy holds pride of place among the handful of genuinely influential works of ancient history. This is Finley at the height of his remarkable powers and in his finest role as historical iconoclast and intellectual provocateur. It should be required reading for every student of pre-modern modes of production, exchange, and consumption."--Josiah Ober, author of *Political Dissent in Democratic Athens*
Immunotherapy in Asthma Laurence

King

Neonatal Formulary advises on the safe use of medications in the pregnant or breastfeeding woman and her baby. It covers the period from conception through pregnancy and beyond with effects of administration of medicines to both mother and baby.

Bishop Lightfoot Springer Science & Business Media

This volume deals with the concept of 'West' and 'East', as held by the ancient Greeks. Cultural exchange in Archaic and Classical Greece through the establishment of Hellenic colonies around the ancient world was an important development, and always a two-way process. To achieve a proper understanding of it requires study from every angle. All 24 papers in this volume

combine different types of evidence, discussing them from every perspective: they are examined not only from the point of view of the Greeks but from that of the locals. The book gives new data, as well as re-examining existing evidence and reinterpreting old theories. The book is richly illustrated.

Body Image, Eating, and Weight
BRILL

In a startling new book a team of distinguished physicians and anthropologists tell how the diet and activity patterns of our prehistoric ancestors can be adopted today to achieve far greater physical and mental health, vitality and longevity.

A Book of Showings to the Anchoress Julian of Norwich
Birkhäuser

Modern architecture is a story of movements, styles and genres. But what of the work that remains defiantly unique, refusing to submit to a label or genre? This book looks at the emerging trend of architecture that favours substance over style, combining functional design and sustainable processes with a straightforward, honest aesthetic.

Publisher Description

Diagnostic Testing of Allergic Disease

Univ of California Press

This excellent study traces the relation of Latin to other Indo-European languages and guides the reader lucidly through Latin phonology, morphology, and syntax. It should prove fascinating not only to Latinists but also to linguists generally and, especially, to students of

Romance languages. Over the years, readers have found that Palmer's treatment of this so-called dead language reveals Latin's continuing vitality and "soul."

The Paleolithic Prescription HarperCollins Publishers

This manual is intended to fill a gap in the area of Romance studies. There is no introduction available so far that broadly covers the field of Catalan linguistics, neither in Catalan nor in any other language. The work deals with the language spoken in Catalonia and Andorra, the Balearic Islands, the region of Valencia, Northern Catalonia and the town of l'Alguer in Sardinia. Besides introducing the ideologies of language and nation and the history of Catalan linguistics, the manual is divided into

separate parts embracing the description – grammar, lexicon, variation and varieties – and the history of the language since the early medieval period to the present day. It also covers its current social and political situation in the new local and global contexts. The main emphasis is placed on modern Catalan. The manual is designed as a companion for students of Catalan, while also introducing specialists of other languages into this field, in particular scholars of Romance languages.

The Latin Language CRC Press

Are Western epistemology, metaphysics, methodology and the philosophy of science grounded only in men's distinctive understandings of themselves, others, and nature? Does this less than human understanding

distort our models of reason and of scientific inquiry? In different ways, the papers in this collection explore the evidence for these increasingly reasonable and intriguing questions. They identify how it is distinctively masculine perspectives on masculine experience which have shaped the most fundamental and formal aspects of systematic thought in philosophy and the natural and social sciences - precisely the aspects of thought believed most gender-neutral. They show how these understandings ground Aristotle's biology and metaphysics; the very definition of the problems of philosophy in Plato, Descartes, Hobbes and Rousseau; the 'adversary method' which is the paradigm of philosophic and scientific reasoning; principles of

individuation in philosophical ontology and the philosophy of language; individualistic assumptions in psychology; functionalism in sociological and biological theory; evolutionary theory; the methodology of political science; Marxist political economy; and conceptions of 'objective inquiry' in the social and natural sciences. These essays also begin to identify for us the distinctive aspects of women's experience which can provide the resources needed for the creation of a truly human understanding. Audience: The book will be of interest to those involved in epistemology, and philosophy of the natural and social sciences, as well as feminist scholars in philosophy. The work will also be of value for theorists, methodologists, and feminist scholars in

the natural and social sciences. Genesis Food & Agriculture Org. In this collection of articles, Kari Elisabeth Børresen and Kari Vogt point out the convergence of androcentric gender models in the Christian and Islamic traditions. They provide extensive surveys of recent research in women's studies, with bio-socio-cultural genderedness as their main analytical category. Matristic writers from late Antiquity, the Middle Ages and the Renaissance are analysed in terms of a female God language, reshaping traditional theology. The persisting androcentrism of 20th-century Christianity and Islam, as displayed in institutional documents promoting women's specific functions, is critically exposed. This volume presents a

pioneering investigation of correlated Christian and Islamic gender models which has hitherto remained uncomparred by women's studies in religion. This work will serve scholars and students in the humanistic disciplines of theology, religious studies, Islamic studies, history of ideas, Medieval philosophy and women's history.

De vita Caesarum Walter de Gruyter GmbH & Co KG

This book provides up-to-date information on lesser known eating disorders (EDs) and eating related disorders. EDs and eating-related disorders include a highly heterogeneous group of syndromes and symptoms characterized by abnormal eating and weight control behaviors that can appear

in all genders and ages. EDs can lead to high rates of morbidity and mortality, especially if they are misdiagnosed and untreated. The risk of underestimation is high for the lesser-known ED, and when unhealthy eating behaviors appear in unusual situations, such as some medical and psychiatric pathologies, adults and the elderly, sexual minorities etc. The volume examines EDs in specific populations (the elderly, males, infants and toddlers, sexual minorities, etc.). Several chapters explore in detail lesser-known EDs (anorexia athletica, avoidant/restrictive food intake disorder, chewing and spitting, EDs by proxy, EDs after bariatric surgery, muscle dysmorphia, night-eating syndrome, nocturnal sleep-related eating disorder,

orthorexia nervosa, pica, rumination disorder, etc.). Finally, other chapters address features of unhealthy eating and weight control behaviors associated with medical diseases (achalasia, craniopharyngioma, cystic fibrosis, cyclic vomiting syndrome, diabetes, dysphagia, Kleine-Levin syndrome, Klinefelter syndrome, Parkinson disease, Prader-Willi syndrome, Turner syndrome, etc.) The book will be a valuable resource for all health professionals who work in the fields of psychiatry, clinical psychology, eating disorders, obesity, medicine, clinical nutrition, public health, and prevention, allowing them to broaden their understanding of these disorders, and to enhance their clinical ability to diagnose them.
