Financial aspects of launching and operating a high-tech company,

including risk analysis, business models, U.S. securities law, financial accounting, tax issues, and stock options, explained accessibly. This book offers an accessible guide to the financial aspects of launching and operating a high-tech business in such areas as engineering, computing,

It goes on to discuss business models and their components, business plans, and exit planning; forms of business organization, and factors to consider in choosing one; equity allocation to founders and employees; applicable U.S. securities law; and sources of equity capital. The book

describes principles of financial accounting, the four basic financial statements, and financial ratios useful in assessing management performance. It also explains financial planning and the use of budgets; profit planning; stock options and other option-type awards; methodologies for valuing a private company; economic assessment of a potential investment project; and the real options approach to risk and managerial flexibility. Appendixes offer case

studies of Uber and of the valuation of Tentex.

As of early 2022, seven of the ten largest firms in the world by market capitalization had been funded through various types of entrepreneurial finance. This handbook provides an up-to-date survey of what we know

about this significant phenomenon in all its forms, and where our knowledge about it needs to head from here. The handbook embraces a wide range of established and emerging academic and practitioner voices across the globe to explore the theoretical and practical flux and tension in the field. Until recently, most studies have taken a supply side perspective, focusing on the perspective of those who provide funding to new ventures. This book takes a different, demand

side perspective, beginning with the entrepreneur and gradually broadening our view to include close by and then more distant funding sources. Following this approach, it is organized into four parts detailing the individual level (founders' resources, bricolage and bootstrapping, effectuation and portfolio entrepreneurship); the inner circle (informal financing, business groups, incubators and accelerators); the wider world (formal debt,

microfinance, venture capital, corporate venture capital, business angels, government funding and family offices); and emerging perspectives (non-Western perspectives, gender, indigenous perspectives, post-conflict and disaster zones and ethics). The introduction considers the general state of the field, while the conclusion takes on additional topics relevant to entrepreneurial finance, such as decentralized finance, big data, behavioral economics,

financial innovation and COVID-19, as well as possible ways in which entrepreneurial finance can have a greater impact on other disciplines. This handbook will be a core reference work for researchers, practitioners, and policy makers seeking an up-to-date academic survey of entrepreneurial finance. It can also be used as a primary text in Ph.D. seminars in entrepreneurship, entrepreneurial finance, and finance. Instructors in Master's level courses in

entrepreneurial finance and venture capital will also find the book of benefit. *Financing New Ventures* South-Western College Fundamentals of Entrepreneurial Finance provides a comprehensive introduction to entrepreneurial finance, showing how entrepreneurs and investors jointly turn ideas into valuable high-growth start-ups. Marco Da Rin and Thomas Hellmann examine the challenges entrepreneurs face in obtaining funding and the

challenges investors face in attracting promising ventures. They follow the joint journey of entrepreneurs and investors from initial match to the eventual success or failure of the venture. Written with the goal of making entrepreneurial finance accessible, this book starts with the basics, develops advanced topics, and derives practical insights. Da Rin and Hellmann build on academic foundations from several disciplines and enrich the text with

data, mini-cases, examples, and exercises. *Entrepreneurial Finance* Oxford University Press, USA  
*Entrepreneurial Finance: Strategy, Valuation, and Deal Structure* applies the theory and methods of finance and economics to the rapidly evolving field of entrepreneurial finance. This approach reveals how entrepreneurs, venture capitalists, and outside investors can rely on academic foundations as a framework to guide decision making. Unlike

other texts, this book prepares readers for a wide variety of situations and problems that stakeholders might confront in an entrepreneurial venture. Readers will find a unique and direct focus on value creation as the objective of each strategic and financial choice that an entrepreneur or investor makes. The authors specifically address the influences of risk and uncertainty on new venture success, devoting substantial attention to methods of financial

modeling and contract design. Finally, the authors provide a comprehensive survey of approaches to new venture valuation, with an emphasis on applications. The book appeals to a wide range of teaching and learning preferences. To help bring the book to life, simulation exercises appear throughout the text. For those who favor the case method, the authors provide a series of interactive cases that correspond with the book chapters, as well as suggestions for published

cases. Finally, the book is organized to complement the development of a business plan for those who wish to create one as they read along. Entrepreneurial Finance is most effectively used in conjunction with a companion website, <http://www.sup.org/entrepreneurialfinance>. On this site, Venture.Sim simulation software, spreadsheets, templates, simulation applications, interactive cases, and tutorials are available for download. For those teaching from the book,

the authors also provide an invaluable suite of instructor's resources. Entrepreneurial Finance : Finance and Business Strategies for the Serious Entrepreneur South Western Educational Publishing Entrepreneurship is now unanimously considered a major engine for socio-economic development, mainly because it creates jobs and innovation. Governments around the world pay special attention to removing entrepreneurial barriers in order to support

development via different policies, especially entrepreneurial finance. Developing, emerging and transition economies (DETEs) significantly differ from industrialized countries because of their specific conditions: institutions, infrastructure facilities, and bureaucratic procedures within the administrative system. Thus, firms and their entrepreneurs in and from DETEs may behave differently, particularly in terms of their financial strategies. Therefore, contextualizing is critical

to better understand the relationship between entrepreneurial finance, innovation, and development in DETEs. This book provides a systematic and profound understanding of how finance, entrepreneurship, innovation, and their interactions contribute to economic development in DETEs, which cover a large number of countries in Asia, Central and Eastern Europe, Latin America, and Africa. The book mainly includes empirical studies and is divided into four parts.

Part A includes four chapters which adopt a multinational approach to examine different sources and types of finance for entrepreneurship and small business in different groups of countries classified as DETEs. Part B also includes four chapters and focuses on entrepreneurial finance in specific countries belonging to the DETEs. Part C goes beyond the business scope of entrepreneurial finance and includes three chapters concerned with the relationship between

finance, women's entrepreneurship, and poverty. Part D includes three chapters focusing on the comparison within developing countries as well as between developing and developed countries. This essential and comprehensive resource will find an audience amongst academics, students, educators, and practitioners, as well as policymakers and regulators.

Entrepreneurial Financial Management Routledge  
Entrepreneurial finance is

a discipline that studies financial resource mobilization, resource allocation, risk moderation, optimization in financial contracting, value creation, and value monetization within the context of entrepreneurship. However, without proper strategic consideration the discipline is incomplete. This book examines how the activity of entrepreneurial finance can be enhanced via a concentration on value creation and through improved strategic

decision-making. The most unique feature of the book is its focus on value creation. For entrepreneurs, value creation is not a one-off activity, but rather a continuous cycle of incremental improvements across a wide range of business activities. Entrepreneurial value creation is described in four comprehensive stages: value creation, value measurement, value enhancement, and value realization, referred to as the C-MER model. This

book focuses on what creates value rather than merely presenting value creation in a straight accounting framework. At the same time, deliberate and tactical planning and implementation ensure that the firm does not ignore the components necessary for it to survive and flourish. Vigorous strategic deliberations maximize the entrepreneurial firm's chances of making the right business decisions for the future, enable the firm to manage its available financial and

non-financial resources in the most optimal manner, ensure that the necessary capital is secured to progress the development of the firm to its desired development level, and build value. While financial considerations are important, the field of strategic entrepreneurial finance represents a fusion of three disciplines: strategic management, financial management, and entrepreneurship. This orientation represents a natural evolution of scholarship to combine specific domains

and paradigms of naturally connected business disciplines and reflects the need to simultaneously examine business topics from different perspectives which may better encapsulate actual entrepreneurial practices. Entrepreneurial Finance McGraw-Hill Europe A practical approach for entrepreneurs and investors Entrepreneurial Finance provides readers with the fundamental knowledge to finance, start, grow, and value new ventures, without the

complex finance terms and calculations. This comprehensive yet practical approach incorporates a global perspective that appeals to entrepreneurs, investors, and students with diverse backgrounds, knowledge, and experience. From Facebook to Camera+, Gary Gibbons, Robert D. Hisrich, and Carlos M. DaSilva use real-world examples and their professional experiences to bring concepts to life. This text is one of the most readable books in

the market without compromising high quality content and resources. Entrepreneurial Finance, Innovation and Development Edward Elgar Publishing Many business ventures today are looking to attract external financing, with an emphasis on business angel investment. Inside this text, the author incorporates the views of business angels, venture capitalists, entrepreneurs, and legal advisors; and draws upon the latest academic thinking on

financing new ventures, providing comparisons between business angel and venture capital investing to further inform the reader. The concepts, principles, and guidelines presented can help you and any entrepreneur, business support agency, business student, and others interested in raising external investment and in developing an “investable” business. The book is organized into seven chapters covering:

- Fundamental concepts of entrepreneurial

venturing and entrepreneurial finance • Market conditions from which investable businesses emerge • The investment process • Deal negotiations • The post-investment relationship between entrepreneur and investor • Recent trends affecting how entrepreneurs raise finance that include strategic exits, “super angels,” and the emergence of “crowdfunding”
