"Invigorating debut . . . [a] full-throated rallying cry." —Publishers Weekly

One of Ms. Magazine's "most-anticipated feminist books of 2023" An eye-opening firsthand account of the ongoing and trailblazing feminist movement in South Korea—one that the world should be watching. Since the beginning of the #MeToo movement, tens of thousands of people in South Korea have taken to the street, and many more brave individuals took a stand, to end a decades-long abortion ban and bring down powerful men accused of sexual misconduct—including a popular presidential contender. South Korean feminists know that the revolution has been a long time coming, between battles against its own patriarchal society as well as challenging stereotypes of docile Asian women in the Western imagination. Now, author Hawon Jung will show the rest of the world that these women are no delicate flowers—they are trailblazing flames. *Flowers of Fire* takes the reader into the trenches of this fight for equality, following along as South Korean activists march on the streets, navigate public and

private spaces where spycam porn crimes are rampant, and share tips and tricks with each other as they learn how to protect themselves from harassment and how to push authorities to act. Jung, the former Seoul correspondent for the AFP, draws on her on-the-ground reporting and interviews with many women who became activists and leaders, from the elite prosecutor who ignited the country's #MeToo movement to the young women who led the war against non-consensual photography. Their stories, though long overlooked in the West, mirror realities that women across the world are all too familiar with: threats of defamation lawsuits to silence victims of assault, tech-based sexual abuse, and criminal justice systems where victims' voices are often met with suspicion and abusers' downfalls are met with sympathy. These are the issues at the heart of their #MeToo movement, and South Korean women have fought against them vigorously—and with extraordinary success. In *Flowers of Fire*, Jung illuminates the strength and tenacity of these women, too often sidelined in global conversations about feminism and gender equality.

Environmental abiotic stresses, such as extreme temperatures, drought, excess light, salinity, and nutrient deficiency, have detrimental effects on plant growth, development, and yield. Plants are equipped with various adaptation mechanisms to cope with such unfavorable conditions. Our understanding of plants' abiotic stress responses is crucial to maintaining efficient plant productivity. This book on the responses of plants to environmental stresses is an attempt to find answers to several basic questions related to their adaptation and protective mechanisms against abiotic stresses. The following chapters of the book describe examples of plants' protective strategies, which cover physiological, cellular, biochemical, and genomic mechanisms. This book is aimed for use by advanced students and researchers in the area of stress biology, plant molecular biology and physiology, agriculture, biochemistry, as well as environmental sciences.

*Reasoning (2022-23 RRB)* Academic Press Flavor is an important evaluation indicator of beverage quality and has a significant impact on product quality ratings and consumer preferences. The variety and content of volatile and non-volatile compounds are the main reasons for flavor differences in beverages, while the type of raw materials and processing methods will affect the final flavors of the products.

There are many kinds of beverages with a complex aroma and taste components. Accurate analysis of such volatile and non-volatile sensory substances is the key to studying their gustatory characteristic. There are hundreds of volatile components in beverages, mainly including aldehydes, ketones, alcohols, acids, and sulfur-containing compounds. In order to systematically study the chemical nature of the inherent aroma of beverages and their flavor formation mechanisms, it is necessary to focus on revealing the metabolic pathways of the key aroma substances at the molecular level.

Additionally, it is important to explore the interactions between beverage matrices and aromas, as well as the elimination mechanisms for off-flavor formations. It is proposed that the combination of modern instrumental analysis with molecular sensory science, and in-depth discussions of the aroma formation pathways and aroma release mechanisms in beverages is a major focus of future aroma research.

In the pre-modern times, while medicine was still relying on classical authorities on herbal remedies, a new engagement with the plant world emerged. This volume follows intertwined strands in the study of plants, examining newly introduced species that captured physicians' curiosity, expanded their therapeutic arsenal, and challenged their long-held medical theories. The development of herbaria, the creation of botanical gardens, and the inspection of plants contributed to a new understanding of the vegetal world. Increased attention to plants led to account for their therapeutic virtues, to test and produce new drugs, to recognize the physical properties of plants, and to develop a new plant science and medicine.
