PRECIOUS RHODES

A Critical History of the Old Testament A&C Black

From the USA Today bestselling author of *The Hating Game*, soon to be a movie starring Lucy Hale and Austin Stowell, an unforgettable romantic comedy about a woman who finally has a shot at her long time crush—if she dares. Crush (n.): a strong and often short-lived infatuation, particularly for someone beyond your reach... Darcy Barrett has undertaken a global survey of men. She's travelled the world, and can categorically say that no one measures up to Tom Valeska, whose only flaw is that Darcy's twin brother Jamie saw him first and claimed him forever as his best friend. Despite Darcy's best efforts, Tom's off limits and loyal to her brother, 99%. That's the problem with finding her dream man at age eight and peaking in her photography career at age twenty—ever since, she's had to learn to settle for good enough. When Darcy and Jamie inherit a tumble-down cottage from their grandmother, they're left with strict instructions to bring it back to

its former glory and sell the property. Darcy plans to be in an aisle seat halfway across the ocean as soon as the renovations start, but before she can cut and run, she finds a familiar face on her porch: house-flipper extraordinaire Tom's arrived, he's bearing power tools, and he's single for the first time in almost a decade. Suddenly Darcy's considering sticking around to make sure her twin doesn't ruin the cottage's inherent magic with his penchant for grey and chrome. She's definitely not staying because of her new business partner's tight t-shirts, or that perfect face that's inspiring her to pick up her camera again. Soon sparks are flying—and it's not the faulty wiring. It turns out one percent of Tom's heart might not be enough for Darcy anymore. This time around, she's switching things up. She's going to make Tom Valeska 99 percent hers. This next hilarious romance includes a special PS section with two Happily Ever Afters—one for this novel featuring Darcy and Tom and the other, an epilogue featuring fan favorites Lucy Hutton and Josh Templeman from *The Hating Game!*

Generalized Additive Models Penguin Random House New Zealand Limited

Set in the future when "firemen" burn books forbidden by the totalitarian "brave new world"

regime.

American Self-Radicalizing Terrorists and the Allure of "Jihadi Cool/Chic" HarperCollins

Also a major motion picture starring Cole Sprouse and Haley Lu Richardson! Goodreads Choice Winner, Best Young Adult Fiction of 2019 In this #1 New York Times bestselling novel that's perfect for fans of John Green's *The Fault in Our Stars*, two teens fall in love with just one minor complication—they can't get within a few feet of each other without risking their lives. Can you love someone you can never touch? Stella Grant likes to be in control—even though her totally out of control lungs have sent her in and out of the hospital most of her life. At this point, what Stella needs to control most is keeping herself away from anyone or anything that might pass along an infection and jeopardize the possibility of a lung transplant. Six feet apart. No exceptions. The only thing Will Newman wants to be in control of is getting out of this hospital. He couldn't care less about his treatments, or a fancy new clinical drug trial. Soon, he'll turn eighteen and then he'll be able to unplug all these machines and actually go see the world, not just its hospitals. Will's exactly what Stella needs to stay away from. If he so much as breathes on Stella, she could lose

her spot on the transplant list. Either one of them could die. The only way to stay alive is to stay apart. But suddenly six feet doesn't feel like safety. It feels like punishment. What if they could steal back just a little bit of the space their broken lungs have stolen from them? Would five feet apart really be so dangerous if it stops their hearts from breaking too?

The Upside of Unrequited Springer Nature

This book explores the modes of European Union (EU) contestation which are mobilized by radical parties and seeks to unearth the relationship of such contestation with populist discourses. It looks specifically at how rightist and leftist parties articulate populist discourses with representations and problematizations of Europe and the EU by examining the left-wing Podemos in Spain and the right-wing Alternative für Deutschland (AfD) in Germany. It argues that radical parties also build their Euroscepticism on other hegemonic discourses and populism is only one possible discursive articulation to mobilize the contestation of the EU. It examines whether populism discourses may serve (or not) as a stimulus for EU contestation and as such shows the implications that this may have for the persistence of Euroscepticism in Western European democracies. This book will be of key interest to scholars and students of radical parties, democracy, democratic and political theory, populism, Euroscepticism, discourse studies and more broadly to comparative politics and European studies.

Minds Alive Samhain Pub Limited

The Book of R is a comprehensive, beginner-friendly guide to R, the world's most popular programming language for statistical analysis. Even if you have no programming experience and little more than a grounding in the basics of mathematics, you'll find everything you need to begin using R effectively for statistical analysis. You'll start with the basics, like how to handle data and write simple programs, before moving on to more advanced topics, like producing statistical summaries of your data and performing statistical tests and modeling. You'll even learn how to create impressive data visualizations with R's basic graphics tools and contributed packages, like ggplot2 and ggvis, as well as interactive 3D visualizations using the rgl package. Dozens of hands-on exercises (with downloadable solutions) take you from theory to practice, as you learn: -The fundamentals of programming in R, including how to write data frames, create functions, and use variables, statements, and loops -Statistical concepts like exploratory data analysis, probabilities, hypothesis tests, and regression modeling, and how to execute them in R -How to access R's thousands of functions, libraries, and data sets -How to draw valid and useful conclusions from your data -How to create publication-quality graphics of your results Combining detailed explanations with real-world examples and exercises, this book will provide you with a solid understanding of both statistics and the depth of R's functionality. Make The Book of R your doorway into the growing world of data analysis.

The Life You Can Save HarperCollins

The timeless and practical advice in *The Magic of Thinking Big* clearly demonstrates how you can: Sell more Manage better Lead fearlessly Earn more Enjoy a happier, more fulfilling life With applicable and easy-to-implement insights, you'll discover: Why believing you can succeed is essential How to quit making excuses The means to overcoming fear and finding confidence How to develop and use creative thinking and dreaming Why making (and getting) the most of your attitudes is critical How to think right towards others The best ways to make "action" a habit How to find victory in defeat Goals for growth, and How to think like a leader "Believe Big," says Schwartz. "The size of your success is determined by the size of your belief. Think little goals and expect little achievements. Think big goals and win big success. Remember this, too! Big ideas and big plans are often easier -- certainly no more difficult - than small ideas and small plans."

The Reminiscences of an Astronomer Harper Collins

From the New York Times bestselling author of *Start With Why* and *Leaders Eat Last*, a bold framework for leadership in today's ever-changing world. How do we win a game that has no end? Finite games, like football or chess, have known players, fixed rules and a clear endpoint. The winners and losers are easily identified. Infinite games, games with no finish line, like business or politics, or life itself, have players who come and go. The rules of an infinite game are changeable while infinite games have no defined endpoint. There are no winners or losers—only ahead and behind. The question is, how do we play to succeed in the game we're in? In this revelatory new book, Simon Sinek offers a framework for leading with an infinite mindset. On one hand, none of us can resist the fleeting thrills of a promotion earned or a tournament won, yet these rewards fade quickly. In pursuit of a just Cause, we will commit to a vision of a future world so appealing that we will build it week after week, month after month, year after year. Although we do not know the

exact form this world will take, working toward it gives our work and our life meaning. Leaders who embrace an infinite mindset build stronger, more innovative, more inspiring organizations.

Ultimately, they are the ones who lead us into the future.

"A new & upgraded edition of the online test from Gallup's Now, discover your strengths"--Jacket.

Sprint Cambridge Scholars Publishing

New York Times bestseller! Fall in love all over again with the characters from the bestselling *Simonverse* novels in this highly anticipated epilogue novella. Perfect for fans of Becky Albertalli, the movie *Love, Simon*, and the new Hulu series spin-off, *Love, Victor!* It's been more than a year since Simon and Blue turned their anonymous online flirtation into an IRL relationship, and just a few months since Abby and Leah's unforgettable night at senior prom. Now the Creekwood High crew are first years at different colleges, navigating friendship and romance the way their story began—on email. Praise for the *Simonverse* novels: *Simon vs. the Homo Sapiens Agenda*, *The Upside of Unrequited*, and *Leah on the Offbeat*: "Worthy of Fault in Our Stars-level obsession."—*Entertainment Weekly*, on *Simon vs. The Homo Sapiens Agenda* "Heart-fluttering, honest, and hilarious. I can't stop hugging this book."—Stephanie Perkins, *New York Times* bestselling author of *Anna and the French Kiss*, on *The Upside of Unrequited* "Albertalli has a fantastic ear for voice, and it's beautifully on display in Leah's funny, wry, and vulnerable first-person narrative."—*ALA Booklist* (starred review), on *Leah on the Offbeat*

Why We Play HarperCollins

Whether it's childhood make-believe, the theater, sports, or even market speculation, play is one of humanity's seemingly purest activities: a form of entertainment and leisure and a chance to explore the world and its possibilities in an imagined environment or construct. But as Roberte Hamayon shows in this book, play has implications that go even further than that. Exploring play's many dimensions, she offers an insightful look at why play has become so ubiquitous across human cultures. Hamayon begins by zeroing in on Mongolia and Siberia, where communities host national holiday games similar to the Olympics. Within these events Hamayon explores the performance of ethical values and local identity, and then she draws her analysis into larger ideas examinations of the spectrum of play activities as they can exist in any culture. She explores facets of play such as learning, interaction, emotion, strategy, luck, and belief, and she emphasizes the crucial ambiguity between fiction and reality that is at the heart of play as a phenomenon. Revealing how consistent and coherent play is, she ultimately shows it as a unique modality of action that serves an invaluable role in the human experience.

The Populism-Euroscepticism Nexus HAU Books

This book provides a rigorous treatment of deterministic and random signals. It offers detailed information on topics including random signals, system modelling and system analysis. System analysis in frequency domain using Fourier transform and Laplace transform is explained with theory and numerical problems. The advanced techniques used for signal processing, especially for speech and image processing, are discussed. The properties of continuous time and discrete time signals are explained with a number of numerical problems. The physical significance of different properties is explained using real-life examples. To aid understanding, concept check questions, review questions, a summary of important concepts, and frequently asked questions are included. MATLAB programs, with output plots and simulation examples, are provided for each concept. Students can execute these simulations and verify the outputs.

Experiencing Time No Starch Press

Minds Alive explores the enduring role and intrinsic value of libraries, archives, and public institutions in the digital age. Featuring international contributors, this volume delves into libraries and archives as institutions and institutional partners, the professional responsibilities of librarians and archivists, and the ways in which librarians and archivists continue to respond to the networked age, digital culture, and digitization. The endless possibilities and robust importance of libraries and archives are at the heart of this optimistic collection. Topics include transformations in the networked digital age; Indigenous issues and challenges in custodianship, ownership, and access; the importance of the harmonization of memory institutions today; and the overarching significance of libraries and archives in the public sphere. Libraries and archives – at once public institutions providing both communal and private havens of discovery – are being repurposed and transformed in intercultural contexts. Only by keeping pace with users' changing needs can they continue to provide the richest resources for an informed citizenry.

Set My Heart To Five Corwin Press

The New York Times bestseller by the acclaimed, bestselling author of *Start With Why* and *Together is Better*. Now with an expanded chapter and appendix on leading millennials, based on Simon Sinek's viral video "Millennials in the workplace" (150+ million views). Imagine a world where almost everyone wakes up inspired to go to work, feels trusted and valued during the day, then returns home feeling fulfilled. This is not a crazy, idealized notion. Today, in many successful organizations, great leaders create environments in which people naturally work together to do remarkable things. In his work with organizations around the world, Simon Sinek noticed that some teams trust each other so deeply that they would literally put their lives on the line for each other. Other teams, no matter what incentives are offered, are doomed to infighting, fragmentation and failure. Why? The answer became clear during a conversation with a Marine Corps general. "Officers eat last," he said. Sinek watched as the most junior Marines ate first while the most senior Marines took their place at the back of the line. What's symbolic in the chow hall is deadly serious on the battlefield: Great leaders sacrifice their own comfort—even their own survival—for the good of those in their care. Too many workplaces are driven by cynicism, paranoia, and self-interest. But the best ones foster trust and cooperation because their leaders build what Sinek calls a "Circle of Safety" that separates the security inside the team from the challenges outside. Sinek illustrates his ideas with fascinating true stories that range from the military to big business, from government to investment banking.

Chemistry: The Impure Science (2nd Edition) MIT Press

Our engagement with time is a ubiquitous feature of our lives. We are aware of time on many scales, from the briefest flicker of change to the way our lives unfold over many years. But to what extent does this encounter reveal the true nature of temporal reality? To the extent that temporal reality is as it seems, how do we come to be aware of it? And to the extent that temporal reality is not as it seems, why does it seem that way? These are the central questions addressed by Simon Prosser in *Experiencing Time*. These questions take on a particular importance in philosophy for two reasons. Firstly, there is a view concerning the metaphysics of time, known as the B-theory of time, according to which the apparently dynamic quality of change, the special status of the present, and even the passage of time are all illusions. Instead, the world is a four-dimensional space-time block, lacking any of the apparent dynamic features of time. If the B-theory is correct, as the book argues, then it must be explained why our experiences seem to tell us otherwise. Secondly, experiences of temporal features such as changes, rates and durations are of independent interest because of certain puzzles that they raise, the solutions to which may shed light on broader issues in the philosophy of mind.

I Believe in a Thing Called Love HarperCollins UK

The high-level language of R is recognized as one of the most powerful and flexible statistical software environments, and is rapidly becoming the standard setting for quantitative analysis, statistics and graphics. R provides free access to unrivalled coverage and cutting-edge applications, enabling the user to apply numerous statistical methods ranging from simple regression to timeseries or multivariate analysis. Building on the success of the author's bestselling *Statistics: An Introduction using R*, *The R Book* is packed with worked examples, providing an all inclusive guide to R, ideal for novice and more accomplished users alike. The book assumes no background in statistics or computing and introduces the advantages of the R environment, detailing its applications in a wide range of disciplines. Provides the first comprehensive reference manual for the R language, including practical guidance and full coverage of the graphics facilities. Introduces all the statistical models covered by R, beginning with simple classical tests such as chi-square and t-test. Proceeds to examine more advanced methods, from regression and analysis of variance, through to generalized linear models, generalized mixed models, time series, spatial statistics, multivariate statistics and much more. The R Book is aimed at undergraduates, postgraduates and professionals in science, engineering and medicine. It is also ideal for students and professionals in statistics, economics, geography and the social sciences.

Saint-Simon and Saint-Simonism Routledge

Now a major motion picture: *Love, Simon*, starring Nick Robinson and Katherine Langford! This edition includes new Simon and Blue emails, a behind-the-scenes scrapbook from the *Love, Simon* movie set, and Becky Albertalli in conversation with fellow authors Adam Silvera and Angie Thomas. William C. Morris Award Winner: Best Young Adult Debut of the Year * National Book Award Longlist "A remarkable gift of a novel."—Andrew Smith, author of *Grasshopper Jungle* "I am so in love with this book."—Nina LaCour, author of *Hold Still* "Feels timelessly, effortlessly now."—Tim Federle, author of *Better Nate Than Ever* "The best kind of love story."—Alex Sanchez,

Lambda Award-winning author of *Rainbow Boys* and *Boyfriends with Girlfriends* Sixteen-year-old and not-so-openly gay Simon Spier prefers to save his drama for the school musical. But when an email falls into the wrong hands, his secret is at risk of being thrust into the spotlight. Now change-averse Simon has to find a way to step out of his comfort zone before he's pushed out—without alienating his friends, compromising himself, or fumbling a shot at happiness with the most confusing, adorable guy he's never met. Incredibly funny and poignant, this twenty-first-century coming-of-age, coming out story—wrapped in a geek romance—is a knockout of a debut novel by Becky Albertalli. Plus don't miss *Yes No Maybe So*, Becky Albertalli's and Aisha Saeed's heartwarming and hilarious new novel, coming in 2020!

The Infinite Game Simon and Schuster

A mattress, box spring, and duvet for a king-size hotel bed weighs in at 225 pounds. Imagine trying to wrestle with changing the sheets and getting the hospital corners just right; it is easy to see why hotel housekeepers experience back and shoulder injuries at increasing rates. David Brody got behind the scenes at the Chicago Hyatt Regency and the Starwood hotels in Hawaii, bypassing management and corporate press releases to interview the housekeeping staff directly. Given Brody's expertise in architecture and design, his mission here is to help us understand service design in hotels in order to situate the needs of hotel customers, housekeepers, and hotel management one relative to the other. What unfolds as a new perspective on hotels is design in terms of spaces, products, maintenance, and workflow systems. We get vivid examples of how a hotel room's design encapsulates a highly orchestrated, hidden process of management and labor, where work is invisible and surface appearances are paramount to the guest's sense of domestic

comfort. (Turn-down service is one example: room light dimmed, drapes drawn, music on classical, turn-down mat on floor, slippers in place, mint on pillow, etc.) Brody opts strongly for what he calls co-design, which means collaboration between workers and management on improving hotel design, and he is unabashedly partisan in taking sides with hotel workers and their unions. He also advocates for sustainability and green politics."

Leaders Eat Last CRC Press

One fateful night, Toni Langston seduces her best friend, the guy she's been in love with forever. Two problems—he doesn't remember a thing that happened and now she's pregnant. Toni Langston has been in love with Simon, her best friend, for years. The night Simon breaks up with his long-time girlfriend, he and Toni make love. Toni is devastated and humiliated when, in the heat of the moment, he calls her by his girlfriend's name. The next morning, Simon remembers nothing of the previous night and Toni is only too relieved not to remind him. Two months later, she discovers she's pregnant. She wants Simon to love her, apart from any obligation he might feel because of the baby. So she embarks on a quest to seduce her best friend, to make him see her as more than a little sister, to make him love her as much as she loves him. It works. Maybe too well. Now when things are perfect, she faces telling him of the secret she's kept.

StrengthsFinder 2.0 Cambridge University Press

Argues that for the first time in history we're in a position to end extreme poverty throughout the world, both because of our unprecedented wealth and advances in technology, therefore we can no longer consider ourselves good people unless we give more to the poor. Reprint.

Policing Desire Random House Trade Paperbacks

Now in widespread use, generalized additive models (GAMs) have evolved into a standard statistical methodology of considerable flexibility. While Hastie and Tibshirani's outstanding 1990 research monograph on GAMs is largely responsible for this, there has been a long-standing need for an accessible introductory treatment of the subject that also emphasizes recent penalized regression spline approaches to GAMs and the mixed model extensions of these models. *Generalized Additive Models: An Introduction with R* imparts a thorough understanding of the theory and practical applications of GAMs and related advanced models, enabling informed use of these very flexible tools. The author bases his approach on a framework of penalized regression splines, and builds a well-grounded foundation through motivating chapters on linear and generalized linear models. While firmly focused on the practical aspects of GAMs, discussions include fairly full explanations of the theory underlying the methods. Use of the freely available R software helps explain the theory and illustrates the practicalities of linear, generalized linear, and generalized additive models, as well as their mixed effect extensions. The treatment is rich with practical examples, and it includes an entire chapter on the analysis of real data sets using R and the author's add-on package *mgcv*. Each chapter includes exercises, for which complete solutions are provided in an appendix. Concise, comprehensive, and essentially self-contained, *Generalized Additive Models: An Introduction with R* prepares readers with the practical skills and the theoretical background needed to use and understand GAMs and to move on to other GAM-related methods and models, such as SS-ANOVA, P-splines, backfitting and Bayesian approaches to smoothing and additive modelling.
