A Reader in Historical and Comparative Linguistics Walter de Gruyter GmbH & Co KG

In February 2006 the first international conference on Multilingualism and Applied Comparative Linguistics (MACL) was held in Brussels, Belgium. The aim of the MACL conference was to bring together scholars from various branches of applied linguistics with a shared interest in cross-linguistic and cross-cultural

communication. The conference thus fostered an exchange of knowledge and expertise among researchers from various disciplines, including educational linguistics, cultural linguistics, terminography, translation studies and studies of specialised languages. The present book is the first of two volumes containing a selection from the approximately 120 papers that were presented at that three-day event.

The Handbook of Historical Linguistics provides a detailed account of the

numerous issues, methods, and results that characterize current work in historical linguistics, the area of linguistics most directly concerned with language change as well as past language states. Contains an extensive introduction that places the study of historical linguistics in its proper context within linguistics and the historical sciences in general. Covers the methodology of historical linguistics and presents sophisticated overviews of the principles governing phonological, morphological, syntactic, and semantic change. Includes contributions from the leading specialists in the field.

Sanskrit and 'orientalism' John Benjamins Publishing

This advanced historical linguistics course book deals with the historical and comparative study of African languages. The first part functions as an elementary introduction to the comparative method, involving the establishment of lexical and grammatical cognates, the reconstruction of their historical development, techniques for the subclassification of related languages, and the use of language-internal evidence, more specifically the application of internal reconstruction. Part II addresses language contact phenomena and the status of language in a wider, cultural-historical and ecological context. Part III deals with the relationship between comparative linguistics and other disciplines. In this rich course book, the author presents valuable views on a number of issues in the comparative study of African languages, more specifically concerning genetic diversity on the African continent, the status of pidginised and creolised languages, language mixing, and grammaticalisation.

Towards a General Comparative Linguistics Routledge

This book gives a comprehensive introduction to Comparative Indo-European Linguistics. It starts with a presentation of the languages of the family (from English and the other Germanic languages, the Celtic and Slavic languages, Latin, Greek and Sanskrit through Armenian and Albanian) and a discussion of the culture and origin of the Indo-Europeans, the speakers of the Indo-European proto-language. The reader is introduced into the nature of language change and the methods of reconstruction of older language stages, with many examples (from the Indo-European languages). A full description is given of the sound changes, which makes it possible to follow the origin of the different Indo-European languages step by step. This is followed by a discussion of the development of all the morphological categories of Proto-Indo-European. The book presents the latest in scholarly insights, like the laryngeal and glottalic theory, the accentuation, the ablaut patterns, and these are systematically integrated into the treatment. The text of this second edition has been corrected and updated by Michiel de Vaan. Sixty-six

new exercises enable the student to practice the reconstruction of PIE phonology and morphology.

TRENDS IN LINGUISTICS is a series of books that open new perspectives in our understanding of language. The series publishes state-of-the-art work on core areas of linguistics across theoretical frameworks as well as studies that provide new insights by building bridges to neighbouring fields such as neuroscience and cognitive science. TRENDS IN LINGUISTICS considers itself a forum for cutting-edge research based on solid empirical data on language in its various manifestations, including sign languages. It regards linguistic variation in its synchronic and diachronic dimensions as well as in its social contexts as important sources of insight for a better understanding of the design of linguistic systems and the ecology and evolution of language. TRENDS IN LINGUISTICS publishes monographs and outstanding dissertations as well as edited volumes, which provide the opportunity to address controversial topics from different

empirical and theoretical viewpoints. High quality standards are ensured through anonymous reviewing.

Present-day Historical and Comparative Linguistics: General background, phonological change John Wiley & Sons

This book considers how and why forms and meanings of different languages at different times may resemble each other. Its distinguished authors investigate the relationship between areal diffusion and the genetic development of languages, and reveal the means of distinguishing what may cause one language to share the characteristics of another. The chapters cover Ancient Anatolia, Modern Anatolia, Australia, Amazonia, Oceania, Southeast and East Asia, and Sub-Saharan Africa. - ;Two languages can resemble each other in the categories, constructions, and types of meaning they use; and in the fo.

Comparative linguistics and

grammaticalization theory both belong to the broader category of historical linguistics, yet few linguists practice both.

The methods and goals of each group seem largely distinct: comparative linguists have by and large avoided reconstructing grammar, while grammaticalization theoreticians have either focused on explaining attested historical change or used internal reconstruction to formulate hypotheses about processes of change. In this collection, some of the leading voices in grammaticalization theory apply their methods to comparative data (largely drawn from indigenous languages of the Americas), showing not only that grammar can be reconstructed, but that the process of reconstructing grammar can yield interesting theoretical and typological insights.

Comparative Semitic Linguistics دار الفلاح للنشر والتوزيع

It is a book that compares English to Arabic regarding nouns, verbs, adjectives, sentence patterns, voice, clause, and most grammatical aspects. It has 16 chapters with exercises. It can be used as a textbook for university students (the

English Department).

Comparative Legal Linguistics Oxford University Press

This book examines legal language as a language for special purposes, evaluating the functions and characteristics of legal language and the terminology of law. Using examples drawn from major and lesser legal languages, it examines the major legal languages themselves, beginning with Latin through German, French, Spanish and English. This second edition has been fully revised, updated and enlarged. A new chapter on legal Spanish takes into account the increasing importance of the language, and a new section explores the use (in legal circles) of the two variants of the Norwegian language. All chapters have been thoroughly updated and include more detailed footnote referencing. The work will be a valuable resource for students, researchers, and practitioners in the areas of legal history and theory, comparative law, semiotics, and linguistics. It will also be of interest to legal translators and terminologists.

Studies in Comparative Developmental Linguistics Penn State Press

As the title indicates, this unique resource is a manual on comparative linguistics, with the examples taken exclusively from Semitic languages. It is an innovative volume that recalls the earlier tradition of textbooks of comparative philology, which, however, exclusively treated Indo-European languages. It is suited for students with at least a year of a Semitic language. By far the largest component of the book are the nine wordlists that provide the data to be manipulated by the student. Says reviewer Peter Daniels, the wordlists “constitute a unique resource for all of comparative linguistics—a considerable quantity of uniform data from a host of related languages. They would be useful for any class in comparative linguistics, not just for those interested specifically in Semitic.” Scattered throughout the text are 25 exercises based on the wordlists that provide a good introduction to the methods of comparativists. Also included are paradigms of the phonological systems of ten Semitic languages as well as Coptic and a form of Berber. A bibliography that guides the student into further reading in Semitic linguistics completes the volume.

Eisenbrauns

In any course of historical and comparative linguistics there will be students of different language backgrounds, different levels of linguistic training, and different theoretical orientation. This textbook attempts to mitigate the problems raised by this heterogeneity in a number of ways. Since it is impossible to treat the language or language family of special interest to every student, the focus of this book is on English in particular and Indo-European languages in general, with Finnish and its closely related languages for contrast. The tenets of different schools of linguistics, and the controversies among them, are treated eclectically and objectively; the examination of language itself plays the leading role in our efforts to ascertain the comparative value of competing theories. This revised edition (1989) of a standard work for comparative linguists offers an added introduction dealing mainly with a semiotic basis of change, a final chapter on aspects of explanation, particularly in historical and human disciplines, and added sections on comparative syntax and on the semiotic status of the comparative

method.

Suppletion, Superlatives, and the Structure of Words John Benjamins Publishing

The immense output in modern linguistics with its ferment of new ideas and successive revolutions and counter-revolutions requires that an introduction should be 'critical', a delicate task in which Professor Palmer has admirably succeeded. While descriptive linguistics has overshadowed comparative linguistics over the last forty years, the great majority of student linguists are still 'philologists' engaged in the study of texts. Hence, there is a current need for an introduction which gives full weight to the comparative and historical aspects -- Provided by the publisher.

The book is about precise typological methods of comparative linguistics: Prefixation Ability Index and Verbal Grammar Correlation Index. These two methods allow us to detect very distant relationship of languages by direct comparison of their structures and without making reconstructions.

Mycenaean to the Koiné Walter de Gruyter

GmbH & Co KG

This volume contains a collection of studies that survey recent research in developmental linguistics, illustrating the fruitful interaction between comparative syntax and language acquisition. The contributors each analyse a well defined range of acquisition data, aiming to derive them from primitive differences between child and adult grammar. The book covers cross-linguistic and cross-categorical phenomena, shedding light on major developments in this novel and rapidly growing field. Extensions to second language acquisition and neuropathology are also suggested.

Comparative Linguistics John Benjamins Publishing

Historical and comparative linguistics has been a major scholarly discipline for 200 years, and yet this is the first dictionary ever devoted to it. With nearly 2400 entries, this dictionary covers every aspect of the subject, from the most venerable work to the exciting advances of the last few years, many of which have not even made it into textbooks yet. All of the traditional terms are here, but so are the terms only introduced recently, in

connection with such varied subjects as pidgin and creole languages, the sociolinguistic study of language change, mathematical and computational methods, the novel approaches to linguistic geography, the controversial proposals of new and vast language families, and the attempts at relating the results of the historical linguists to those of the archaeologists, the anthropologists and the geneticists. More than just a dictionary, this book provides genuine linguistic examples of most of the terms entered, detailed explanations of fundamental concepts, critical assessment of controversial ideas, cross-references to related terms, and an abundance of references to the original literature. Features: *The first dictionary in the field. *Comprehensive coverage. *Clearly written and accurate entries. *Covers traditional and contemporary terminology. *Provides linguistic examples of terms defined. *Supplies numerous cross-references to related terms. *Includes hundreds of references to the original literature.

Things That Fell From My Head A new book of Poems to Benefit Victims of Domestic Violence The fear and loneliness a victim of abuse feels can be paralyzing. In Things That Fell From My Head, Wendy Matarese has collected poems born from that darkness into a transparent journal that allows readers to peer at moments of joy, despair and triumph. Matarese's writing is a striking combination of stark reality, beautiful subtlety and surprising honesty that will delight, sadden and, most of all, inspire. Her poems, "The Birthday Party" and "Oh, Dark Spirit", allow a glimpse into this natural poet's emotional verse.

The comparison of sound sequences

(words, morphemes) constitutes the core of many techniques and methods in historical linguistics. With the help of these techniques, corresponding sounds can be determined, historically related words can be identified, and the history of languages can be uncovered. So far, the application of traditional techniques for sequence comparison is very tedious and time-consuming, since scholars have to apply them manually, without computational support. In this study, algorithms from bioinformatics are used to develop computational methods for sequence comparison in historical linguistics. The new methods automatize several steps of the traditional comparative method and

can thus help to ease the painstaking work of language comparison. Dissertations in Language and Cognition This series explores issues of mental representation, linguistic structure and representation, and their interplay. The research presented in this series is grounded in the idea explored in the Collaborative Research Center 'The structure of representations in language, cognition and science' (SFB 991) that there is a universal format for the representation of linguistic and cognitive concepts.
