Learning and Development Practice in the Workplace is the ideal textbook for anyone studying CIPD L&D qualifications and apprenticeships at Level 3 or Level 5, as well as for practitioners new to an L&D role. This book covers what is required of an L&D professional and how to meet and exceed these expectations, how to align L&D activity with organisational strategy and, crucially, how to identify learning needs and design effective L&D practice. This new edition of Learning and Development Practice in the Workplace has been fully updated, reflecting the new CIPD Profession Map, and now has dedicated chapters on the different approaches to learning delivery, including face-to-face training and facilitation, technology-based learning, coaching, mentoring and social and collaborative learning. The long-awaited new edition of NAEYC's book Developmentally Appropriate Practice in Early Childhood Programs is here, fully revised and updated! Since the first edition in 1987, it has been an essential resource for the early childhood education field. Early childhood educators have a professional responsibility to plan and implement intentional, developmentally appropriate learning experiences that promote the social and emotional development, physical development and health, cognitive development, and general learning competencies of each child served. But what is developmentally appropriate practice (DAP)? DAP is a framework designed to promote young children's optimal learning and development through a strengths-based approach to joyful, engaged learning. As educators make decisions to support each child's learning and development, they consider what they know about (1) commonality in children's development and learning, (2) each child as an individual (within the context of their family and community), and (3) everything discernible about the social and cultural contexts for each child, each educator, and the program as a whole. This latest edition of the book is

fully revised to underscore the critical role social and cultural contexts play in child development and learning, including new research about implicit bias and teachers' own context and consideration of advances in neuroscience. Educators implement developmentally appropriate practice by recognizing the many assets all young children bring to the early learning program as individuals and as members of families and communities. They also develop an awareness of their own context. Building on each child's strengths, educators design and implement learning settings to help each child achieve their full potential across all domains of development and across all content areas.

This book advances new research directions that explore the emotional and affective dimensions of development. Going beyond merely placing emotion and/or affect as the objects of study, it examines

'development' in fresh ways through analysis of its affective dimensions. Affect and emotions are complicit in the structural conditions that sustain material and social inequalities and deprivations, and critical to the potential for disruption and transformation. The chapters in this volume demonstrate how affect and emotions enrich understandings of, or rethink power configurations in development while being attentive to forces of destabilization and creativity. They unravel the subtleties of power in development from micro to macro scales, enhance the understanding of development as an inherently political process, and highlight the possibilities for resistance and transformation. The book introduces new lines of enquiry to understand power in development theory and practice, grounded in rich empirical research from across Asia and Australia and will be a valuable resource for students and researchers of anthropology, third world studies, development studies and development theory. The chapters in this book were originally published as a special issue of *Third World Quarterly*.

Although the significance of '9/11' is subject to debate, it is symbolic of a general sentiment of discontinuity whereby society is vulnerable to undefined and highly disruptive events. Recent catalysts of this sentiment are eye-catching developments such as the SARS (Severe Acute Respiratory Syndrome) and bird flu outbreaks, the Enron and Parmalat scandals, political assassinations in Sweden and the Netherlands, regime changes in Iraq and Afghanistan, and terrorist attacks in Bali, Istanbul, Madrid, and various parts of the Middle East. However, recent discontinuities should not be seen as evidence that discontinuities occur more frequently now than they did before.

Looking back in history we see that disruptive processes are common. For example, 25 years ago few Europeans would have predicted the upcoming upheavals on their own continent: the collapse of communism, Berlin as the capital of a reunited Germany, the wars in the former Yugoslavia, the single European currency, and the near doubling of the number of European Union member states. Changes elsewhere have been no less discontinuous and unforeseen: the fall of the Asian tigers, the emergence of the Internet and mobile telecommunication, and the presidency of Nelson Mandela. Societal discontinuity is a relatively new area of concern in policy development. Since the 1970s the consideration of change and discontinuity has gained some ground over predictive forecasting, which tended to reason from continuous developments and linear processes. Rather than making forecasting the future, it has become popular to use scenarios as a manner to consider several possible futures. Scenarios are coherent descriptions of alternative hypothetical futures that reflect different perspectives on past, present, and future developments, which can serve as a basis for action. Scenario development aims to combine analytical knowledge with creative thinking in an effort to capture a wide range of possible future developments in a limited number of outlooks. Scenario development assumes that the future is uncertain and the directions in which current developments might range from the conventional to the revolutionary. In theory, scenario development is a way to consider future discontinuity. However, there are indications that the theoretical promise is not reflected in scenario practice. Research has shown that

scenarios do not consider the idea of discontinuity as a matter of course. In our research, we found that a scenario study would benefit from efforts to create and foster a 'culture of curiosity' for exploring the future and the possible discontinuities rather than simply commissioning a scenario study to provide insights about the future. Only then can one read the writing on the wall of future developments.

The meal is the key eating occasion, yet professionals and researchers frequently focus on single food products, rather than the combinations of foods and the context in which they are consumed. Research on meals is also carried out in a wide range of fields and the different disciplines do not always benefit from each others' expertise. This important collection presents contributions on meals from many perspectives, using different methods, and focusing on the different elements involved. Two introductory chapters in part one summarise the key findings in

Dimensions of the Meal, the first book to bring an interdisciplinary perspective to meals, and introduce the current publication by reviewing the key topics discussed in the following chapters. Parts two to four then consider how meals are defined, studied and taught. Major considerations include eating socially and eating alone, the influence of gender, and the different situations of home, restaurant and institutional settings. Part five reviews meals worldwide, with chapters on Brazilian, Indian, Chinese and Thai meals, among others. The final parts discuss meals from further perspectives, including those of the chef, product developer and meal setting designer. With its distinguished editor and international team of contributors, *Meals in science and practice* is an informative and diverse reference for both professionals and academic researchers interested in food from disciplines such as food product development, food service, nutrition, dietetics, sociology, anthropology, psychology, public health, medicine and marketing. Summarises key findings in dimensions of the meal. Considers how meals are defined, studied and taught, including eating alone and socially and the influence of gender. Reviews the meaning of meals in different cultures.
