The Necropsy Book Princeton University Press

We have a special tree in our yard -- an apple pie tree! Colorful collage illustrations follow each season as an apple tree grows leaves, fragrant blossoms, and tiny green apples. Soon the fruit is big, red, and ready to be picked. It's time to make an apple pie! Here is a celebration of apples and how things grow -- sure to delight young readers all year long.

Once Upon a Time, Upon a Nest Lerner Publishing Group

This book provides insights into the genetics and the latest advances in genomics research on the common bean, offering a timely overview of topics that are pertinent for future developments in legume genomics. The common bean (*Phaseolus vulgaris* L.) is the most important grain legume crop for food consumption worldwide, as well as a model for legume research, and the availability of the genome sequence has completely changed the paradigm of the ongoing research on the species. Key topics covered include the numerous genetic and genomic resources, available tools, the identified genes and quantitative trait locus (QTL) identified, and there is a particular emphasis on domestication. It is a valuable resource for students and researchers interested in the genetics and genomics of the common bean and legumes in general.

How our collective intelligence has helped us to evolve and prosper Humans are a puzzling species. On the one hand, we struggle to survive on our own in the wild, often failing to overcome even basic challenges, like obtaining food, building shelters, or avoiding predators. On the other hand, human groups have produced ingenious technologies, sophisticated languages, and complex institutions that have permitted us to successfully expand into a vast range of diverse environments. What has enabled us to dominate the globe, more than any other species, while remaining virtually helpless as lone individuals? This book shows that the secret of our success lies not in our innate intelligence, but in our collective brains—on the ability of human groups to socially interconnect and learn from one another over generations. Drawing insights from lost

European explorers, clever chimpanzees, mobile hunter-gatherers, neuroscientific findings, ancient bones, and the human genome, Joseph Henrich demonstrates how our collective brains have propelled our species' genetic evolution and shaped our biology. Our early capacities for learning from others produced many cultural innovations, such as fire, cooking, water containers, plant knowledge, and projectile weapons, which in turn drove the expansion of our brains and altered our physiology, anatomy, and psychology in crucial ways. Later on, some collective brains generated and recombined powerful concepts, such as the lever, wheel, screw, and writing, while also creating the institutions that continue to alter our motivations and perceptions. Henrich shows how our genetics and biology are inextricably interwoven with cultural evolution, and how culture-gene interactions launched our species on an extraordinary evolutionary trajectory. Tracking clues from our ancient past to the present, *The Secret of Our Success* explores how the evolution of both our cultural and social natures produce a collective intelligence that explains both our species' immense success and the origins of human uniqueness.

Since intelligence can be influenced by circumstance and environment, *The Parallel Curriculum Model Unit, K-5*, shows elementary educators how to provide clear unit planning utilizing the empirical-based model. Broken out into 4 sections, this resource provides the following: 1) a chapter on each content unit in K-5 literacy, mathematics, social studies and science using the Model; 2) a content framework based on national and content standards; 3) unit assessments, and 4) unit sequence as well as teacher reflection lessons.

Approximately 5-7 lessons of each content area will be provided in every chapter in this handy resource. The opening chapter defines what *The Parallel Curriculum* is and discusses how this researched-based curriculum can be created and utilized for gifted learners, learners with special needs, as well as general education students. Recognizing that curricula should be flexible to meet the needs of all learners, *The Parallel Curriculum Model Unit Book, K-5*, provides a educational rationale for developing a new curriculum model, gives a brief overview of the theoretical underpinnings of the model, and aims to help practitioners apply the specific units and lessons in the classroom.

On Monday Jasper finds a bean. In spite of all the attention he lavishes on it, the bean will just not grow. This deceptively simple story encompasses a wealth of material to stimulate children's learning and imagination - days of the week, the passing of time, what plants need to grow, magical beanstalks and giants! This audio version by Timothy Spall - with specially composed music - will

enchant listeners, and also provides a perfect complement to the book for all adults using it with children learning to read. The second side has the reading without music and with page-turn signals.

The activities and suggestions in *The Little Book of Sequencing Skills* will help you and the children in your care to explore a range of creative ways to develop sequencing skills. The ability to sequence events and objects is essential for young children's learning and the ability to put thoughts and actions into sequence is important for the development many competencies. Sequencing skills are often associated with communication and literacy but the ability to predict 'what will come next,' whether it be in a mathematical pattern, following instructions, understanding patterns of letters and sounds, or understanding the consequences of actions is imperative across all areas of learning. There are many ways of developing sequencing skills. This book hopes to offer the early years practitioner a variety of practical, creative ways to help with the understanding, recognition and manipulation of sequences and to do so within the context of a variety of areas of learning.
