 The purpose of this book is to instigate observation of local conditions, study of the community, and confident, self-reliant action among and for country people. Rural life has changed markedly, and will continue to do so. On farms and in farming towns, human forces are striving for expression, and human society needs active, energetic participation to change successfully. Country dwellers are no longer isolated from their urban fellows, and as such can contribute much to solving the current problems of rural life.

 Handbook of Generative Approaches to Language Acquisition Springer Science & Business Media
Handbook of Generative Approaches to Language Acquisition Lippincott Williams & Wilkins
 A major contribution to the study of language acquisition and language development inspired by theoretical linguistics has been made by research on the acquisition of Italian syntax. This book offers an updated overview of results from theory-driven

experimental and corpus-based research on the acquisition of Italian in different modes (monolingual, early and late L2, SLI, etc.), as well as exploring possible developments for future research. The book focuses on experimental studies which address research questions generated by linguistic theory, providing a detailed illustration of the fruitful interaction between linguistic theorizing and developmental studies. The authors are leading figures in theoretical linguistics and language acquisition; their own work is featured in the research presented here. Students and advanced researchers will benefit from the systematic review offered by this book and the critical assessment of the field that it provides.

Language, Communication, and the Brain Routledge Kegan & Paul
 The volume contains 18 contributions from senior and junior scholars covering core issues within the theoretical investigation of the architecture and the mechanisms of the faculty of language, with particular emphasis on the computational component. They all pursue a comparative approach, investigating and comparing different languages and dialects or comparing different modes of acquisition, as in Adriana Belletti's work, to whom the volume is dedicated. The papers in the first part (by Chomsky, Rizzi, Bianchi & Chesi, Cinque, Costa, Calabrese) deal with theoretical issues such as labeling, the cartography of structures and the locality of derivations in a broad sense. The papers in the second part (by Haegeman & Lohndal, Delfitto & Fiorin, Cruschina, Lahousse, Di Domenico and

Contemori, Dal Pozzo & Matteini) concentrate on the realization of structure relative to discourse, particularly on topic and focus positions in the vP periphery, and on referential dependencies. The third part collects papers (by Cardinaletti & Volpato, Friedmann, Yachini & Szterman, Snyder & Hyams, Hamann & Tuller, Cecchetto & Donati, Grewendorf & Poletto) that specifically target intervention effects in relative clauses as apparent in different structures, different languages, and different populations.

 Language, Communication, and the Brain
 Modern linguistic theory has been based on the promise of explaining how language acquisition can occur so rapidly with such subtlety, and with both surprising uniformity and diversity across languages. This handbook provides a summary and assessment of how far that promise has been fulfilled, exploring core concepts in acquisition theory, including notions of the initial state, parameters, triggering theory, the role of competition and frequency, and many others, across a variety of syntactic topics that have formed the central domains of investigation and debate. These topics are treated from the unique perspective of central actors in each domain who have helped shape the research agenda. The authors have presented a summary of the data, the theories under discussion, and their own best assessments of where each domain stands. Providing as well the

agenda for future work in the field showing both particular needs and general directions that should be pursued in the coming decades.
