Grit, Curiosity, and the Hidden Power of Character Carson-Dellosa Publishing

Winner of the Shingo Publication Award Accelerate your organization to win in the marketplace. How can we apply technology to drive business value? For years, we've been told that the performance of software delivery teams doesn't matter—that it can't provide a competitive advantage to our companies. Through four years of groundbreaking research to include data collected from the State of DevOps reports conducted with Puppet, Dr. Nicole Forsgren, Jez Humble, and Gene Kim set out to find a way to measure software delivery performance—and what drives it—using rigorous statistical methods. This book presents both the findings and the science behind that research, making the information accessible for readers to apply in their own organizations. Readers will discover how to measure the performance of their teams, and what capabilities they should invest in to drive higher performance. This book is ideal for management at every level.

The impact of childhood trauma and abuse can forever alter the course of history. Throughout generations, countless children have been hurt by those that are meant to care for them. Yet, in society once those children turn to adults the impacts of child abuse are often discounted and spoken to with the frame of "that was years ago" or "it's time to get over it." The reality is that we are at the core a collection of all of our experiences leading up to

this very moment. If the childhood trauma survivor's foundation is built atop a volcano, then sooner or later it will be engulfed. Childhood trauma and abuse is the elephant in the room of societies mental health epidemic, and most people don't know how to understand the role that trauma has played in their life. When I sat down to craft the baseline of *The Think Unbroken* book, I did so intending to create something that would be a testimony to the undeniable will of the human mindset. For generations, the world has been plagued by the ramifications of the effects of Child Trauma, and like millions of childhood trauma survivors, I was stuck in *The Vortex*. My life in a word was a disaster. I was an addict of undeniable proportions, I was morbidly obese and suffocating under the weight of my past. *Think Unbroken* is not only a guide to helping other Trauma Survivors find their way out of *The Vortex*, but it is also the cornerstone to how I changed my life. I am, in essence, a product of my product, and I believe that *Think Unbroken* is the key to taking the first steps in overcoming the effects of childhood trauma. This book will expose you to possibility through mindset, palatable understandings of self, and a step by step guide to discovering out how to place the first piece of the puzzle on the table. What you will find in *Think Unbroken* is not just my story, but a reflection of the possibilities that can become a reality when you understand that Mindset is Everything. Childhood trauma took everything from me, but I took everything back, and so can you. "THOUGH TRAUMA MAY BE OUR FOUNDATION IT IS NOT OUR FUTURE."

In the past decade, few subjects at the intersection of medicine and sports have generated as much public interest as sports-related concussions - especially among youth. Despite growing awareness of sports-related concussions and campaigns to educate athletes, coaches, physicians, and parents of young athletes about concussion recognition and management, confusion and controversy persist in many areas. Currently, diagnosis is based primarily on the symptoms reported by the individual rather than on objective diagnostic markers, and there is little empirical evidence for the optimal degree and duration of physical rest needed to promote recovery or the best timing and approach for returning to full physical activity. Sports-Related Concussions in Youth: Improving the Science, Changing the Culture reviews the science of sports-related concussions in youth from elementary school through young adulthood, as well as in military personnel and their dependents. This report recommends actions that can be taken by a range of audiences - including research funding agencies, legislatures, state and school superintendents and athletic directors, military organizations, and equipment manufacturers, as well as youth who participate in sports and their parents - to improve what is known about concussions and to reduce their occurrence. Sports-Related Concussions in Youth finds that while some studies provide useful information, much remains unknown about the extent of concussions in youth; how to diagnose, manage, and prevent concussions; and the short- and long-term consequences of concussions as well as repetitive head impacts that do not result in concussion symptoms. The culture of sports negatively influences athletes' self-reporting of concussion symptoms and their adherence to return-to-play guidance. Athletes, their teammates, and, in some cases, coaches and parents may not fully appreciate the health threats posed by concussions. Similarly, military recruits are immersed in a culture that includes devotion to duty and service before self, and the critical nature of concussions may often go unheeded. According to Sports-Related Concussions in Youth, if the youth sports community can adopt the belief that concussions are serious injuries and emphasize care for players with concussions until they are fully recovered, then the culture in which these athletes perform and compete will become much safer. Improving understanding of the extent, causes, effects, and prevention of sports-related concussions is vitally important for the health and well-being of youth athletes. The findings and recommendations in this report set a direction for research to reach this goal.

The Science of Lean Software and DevOps: Building and Scaling High Performing Technology Organizations Evan Moor Educational Publishers

With all that we know about how students learn, the nature of the world they will face after graduation, and the educational inequities that have existed for centuries, maintaining a traditional, one-size-fits-all approach to teaching and learning is tantamount to instructional malpractice. International security, the success of global economies, and sustainability as a global society all depend on the success of our education system in the years to come. It's our obligation to prepare our students for their future—not our past. Authors Eric C. Sheninger and Thomas C. Murray outline eight keys—each a piece of a puzzle for transforming the K-12 education system of teaching and learning—to intentionally design tomorrow's schools so today's learners are prepared for success . . . and stand ready to create

new industries, find new cures, and solve world problems. The traditional model of schooling ultimately prepares students for the industrial model of the past. If we want our students to become successful citizens in a global society, we must dramatically shift to a more personal approach. Failure is not an option. We can no longer wait. Let Learning Transformed show you how you can be part of the solution. The authors encourage you to use the hashtag #LT8Keys to continue the discussion online.
