 Physics Using physics, you can calculate
 the gravitational force that is exerted on
 one object by another object. For example,
 given the weight of, and distance
 between, two objects, you can calculate
 how large the force of gravity is between
 them. Here are some practice questions
 that you can try. Practice questions The

 - dummies Gravity, or gravitation, is a
 natural phenomenon by which all things
 with mass or energy—including planets,
 stars, galaxies, and even light—are
 brought toward one another. On Earth,
 gravity gives weight to physical objects,
 and the Moon's gravity causes the ocean
 tides. The gravitational attraction of the
 original gaseous matter present in the
 Universe caused it to begin coalescing,
 forming stars—and for the stars to group
 together into galaxies—so gravity is
 responsible for many of ... Gravity -
