Tabbner's Nursing Care - E-Book John Wiley & Sons

Through interdisciplinary and multidisciplinary perspectives, and with an emphasis on exploring patterns as well as distinct and unique conditions across the globe, this collection examines advanced and cutting-edge theoretical and methodological approaches to the study of the health of urban populations. Despite the growing interest in global urban health, there are limited resources available that provide an extensive and advanced exploration into the health of urban populations in a transnational context. This volume offers a high-quality and comprehensive examination of global urban health issues by leading urban health scholars from around the world. The book brings together a multi-disciplinary perspective on urban health, with chapter contributions emphasizing disciplines in the social sciences, construction sciences and medical sciences. The co-editors of the collection come from a number of different disciplinary backgrounds that have been at the forefront of urban health research, including public health, epidemiology, geography, city planning and urban design. The book is intended to be a reference in global urban health for

research libraries and faculty collections. It will also be appropriate as a text for university class adoption in upper-division under-graduate courses and above. The proposed volume is extensive and offers enough breadth and depth to enable it to be used for courses emphasizing a U.S., or wider Western perspective, as well as courses on urban health emphasizing a global context.

Pharmacology for Nurses Routledge Theoretically and scientifically sound, as well as practical and applicable, this resource is a thorough introduction to the specialty of community health nursing.

Learning from SARS Pearson Higher Ed This innovative textbook uses a problem-based learning (PBL) approach to cover content that is most common to child branch nursing courses. The evidence-based PBL 'triggers' are grounded in the reality of everyday contemporary nursing practice, and readers are engaged in an active learning process in order to develop key skills for clinical practice and life long learning. The book features individual chapters focusing on the different care environments that student nurses experience when caring for children, young people and families within health and social care. It is not necessary for readers to be undertaking a PBL structured course in order to use, and benefit from, this text.

Though slogans such as 'nursing must be a research-based profession' have been around for a long time, recent initiatives such as Nursing Development Units (NDUs), quality assurance and evidence-based practice have moved nursing to the forefront amongst health professions in taking seriously the promotion of rational care based on a critical appraisal of past practices and the evaluation of new ideas and techniques. This is the first book to examine research and development in clinical nursing practice. It explains how to do it and how to apply it.

Significant concerns about the poor health and prevalence of chronic illness amongst a number of ethnic minority populations have led to heightened debates about how best to improve the situation. For some the answer is to see their experiences as part of the general social class inequality in health, but recent evidence questions the extent to which social class can explain the variations in health which ethnic minorities experience. *Researching the Cultural Differences in Health* offers a range of accounts of how people in ethnic minority groups perceive and manage their illness. Some of the chapters focus on Bangladeshi, and other South Asian groups, as well as Afro-Caribbeans and Irish people. The illness conditions discussed include diabetes, hypertension, sickle-cell disorder, mental illness and coronary heart disease. This book will provide invaluable reading for those involved in providing health services for ethnic minorities, and all lecturers and students in medical and nursing education

as well as those studying sociology and social administration.

Drugs, Crime and Public Health provides an accessible but critical discussion of recent policy on illicit drugs. Using a comparative approach - centred on the UK, but with insights and complementary data gathered from the USA and other countries - it discusses theoretical perspectives and provides new empirical evidence which challenges prevalent ways of thinking about illicit drugs. It argues that problematic drug use can only be understood in the social context in which it takes place, a context which it shares with other problems of crime and public health. The book demonstrates the social and spatial overlap of these problems, examining the focus of contemporary drug policy on crime reduction. This focus, Alex Stevens contends, has made it less, rather than more, likely that long-term solutions will be produced for drugs, crime and health inequalities. And he concludes, through examining competing visions for the future of drug policy, with an argument for social solutions to these social problems.

Policy, Planning and Financing McGraw-Hill/Appleton & Lange

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners

with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.
