Our intention in this collection is to provide, largely through original writings, an extended account of pi from the dawn of mathematical time to the present. The story of pi reflects the most seminal, the most serious, and sometimes the most whimsical aspects of mathematics. A surprising amount of the most important mathematics and a significant number of the most important mathematicians have contributed to its unfolding directly or otherwise. Pi is one of the few mathematical concepts whose mention evokes a response of recognition and interest in those not concerned professionally with the subject. It has been a part of human culture and the educated imagination for more than twenty-five hundred years. The computation of pi is virtually the only topic from the most ancient stratum of mathematics that is still of serious interest to modern mathematical research. To pursue this topic as it developed throughout the millennia is to follow a thread through the history of mathematics that winds through geometry, analysis and special functions, numerical analysis, algebra, and number theory. It offers a subject that provides mathematicians with examples of many current mathematical techniques as well as a palpable sense of their historical development. Why a Source Book? Few books serve wider potential audiences than does a source book. To our knowledge, there is at present no easy access to the bulk of the material we have collected.

Practical Natural Language Processing Springer Science & Business Media

Over the past 35 years, hundreds of thousands of readers have agreed: This is the classic guide to "living, traveling, and taking things as they come" in Mexico. Now in its updated 14th edition, *The People's Guide to Mexico* still offers the ideal combination of basic travel information, entertaining stories, and friendly guidance about everything from driving in Mexico City to hanging a hammock to bartering at the local mercado. Features include: • Advice on planning your trip, where to go, and how to get around once you're there • Practical tips to help you stay healthy and safe, deal with red tape, change money, send email, letters and packages, use the telephone, do laundry, order food, speak like a local, and more • Well-informed insight into Mexican culture, and hints for enjoying traditional fiestas and celebrations • The most complete information available on Mexican Internet resources, book and map reviews, and other info sources for travelers

More Food: Road to Survival Springer Science & Business Media

THE STORY: The setting is a small Oklahoma town in the early 1920s and the home of the Flood family. Here we find Rubin, a traveling salesman for a harness firm, Cora, his sensitive and lovely wife, Sonny, their little boy and Reenie, their teenage daughter

The People's Guide to Mexico Rick Steves

How can an evangelist convert a hardboiled sophisticate? Why does a prisoner of war sign a "confession" that he knows is false? How is a criminal pressured into admitting his guilt? Do the evangelist, the POW's captor, and the policeman use similar methods to gain their ends? These and

other compelling questions are discussed in this definitive work by William Sargant, who for many years until his death in 1988 was a leading physician in psychological medicine. Sargant spells out and illustrates the basic technique used by evangelists, psychiatrists, and brainwashers to disperse the patterns of belief and behavior already established in the minds of their hearers, and to substitute new patterns for them.

Introduction to the Textual Criticism of the Greek New Testament Twisted True Tales from Scienc

TO THE SECOND EDITION In the nine years since this book was first written, rapid progress has been made scientifically in nuclear fusion, space physics, and nonlinear plasma theory. At the same time, the energy shortage on the one hand and the exploration of Jupiter and Saturn on the other have increased the national awareness of the important applications of plasma physics to energy production and to the understanding of our space environment. In magnetic confinement fusion, this period has seen the attainment of a Lawson number nTE of 2×10^{21} cm⁻³ sec in the Alcator tokamaks at MIT; neutral-beam heating of the PL T tokamak at Princeton to $KTi = 6.5$ keV; increase of average β to 3%-5% in tokamaks at Oak Ridge and General Atomic; and the stabilization of mirror-confined plasmas at Livermore, together with injection of ion current to near field-reversal conditions in the 2XIII β device. Invention of the tandem mirror has given magnetic confinement a new and exciting dimension. New ideas have emerged, such as the compact torus, surface-field devices, and the EBT mirror-torus hybrid, and some old ideas, such as the stellarator and the reversed-field pinch, have been revived. Radiofrequency heating has become a new star with its promise of dc current drive. Perhaps most importantly, great progress has been made in the understanding of the MHD behavior of toroidal plasmas: tearing modes, magnetic VII VIII islands, and disruptions.

The Voyage of François Pyrard of Laval to the East Indies, the Maldives, the Moluccas and Brazil Academic Press

2018 version of the OSINT Tools and Resources Handbook. This version is almost three times the size of the last public release in 2016. It reflects the changing intelligence needs of our clients in both the public and private sector, as well as the many areas we have been active in over the past two years.

Fun for Flyers Student's Book PHI Learning Pvt. Ltd.

This book presents and analyzes the concept of online brand communities, an emerging and exciting topic in marketing and eCommerce. First, it lays out the foundations like the evolution of the Web and the so-called Social Web, its utility for users and businesses, and the evolution of the marketing mind-set to adapt the Social Web. On this basis, the book then presents a detailed analysis of online brand communities, examining the concept of virtual community with a specific focus on virtual brand communities. In this context the book also explores recent trends related to branding and brand management. Next, it proposes a classification system for online brand communities, taking into account questions like the motivating factors for consumers to join, participate and stay in a

community. The process of value creation in communities is examined from both business and consumer perspectives. The book draws to a close with a brief presentation of the process broadly accepted for the successful development of online brand communities.

Radar Instruction Manual Springer Science & Business Media

A comprehensive guide to mapping software explains how to interface one's GPS receiver with a computer to create maps, annotate aerial photos, and create 3-D maps. Also includes where to find free software and maps, how to use aerial photos and satellite imagery, and how to view favorite backcountry locations in 3-D.

Electronics Buying Guide O'Reilly Media

This textbook provides an introduction to digital forensics, a rapidly evolving field for solving crimes. Beginning with the basic concepts of computer forensics, each of the book's 21 chapters focuses on a particular forensic topic composed of two parts: background knowledge and hands-on experience through practice exercises. Each theoretical or background section concludes with a series of review questions, which are prepared to test students' understanding of the materials, while the practice exercises are intended to afford students the opportunity to apply the concepts introduced in the section on background knowledge. This experience-oriented textbook is meant to assist students in gaining a better understanding of digital forensics through hands-on practice in collecting and preserving digital evidence by completing various exercises. With 20 student-directed, inquiry-based practice exercises, students will better understand digital forensic concepts and learn digital forensic investigation techniques. This textbook is intended for upper undergraduate and graduate-level students who are taking digital-forensic related courses or working in digital forensics research. It can also be used by digital forensics practitioners, IT security analysts, and security engineers working in the IT security industry, particular IT professionals responsible for digital investigation and incident handling or researchers working in these related fields as a reference book.

Introduction to Plasma Physics and Controlled Fusion UPNE

Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies. Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation. Robert J. Blackwell Assistant Secretary for Maritime Affairs

PC Magazine Oxford University Press, USA

Many books and courses tackle natural language processing (NLP) problems with toy use cases and well-defined datasets. But if you want to build, iterate, and scale NLP systems in a business setting and tailor them for particular industry verticals, this is your guide. Software engineers and data scientists will learn how to navigate the maze of options available at each step of the journey.

Through the course of the book, authors Sowmya Vajjala, Bodhisattwa Majumder, Anuj Gupta, and Harshit Surana will guide you through the process of building real-world NLP solutions embedded in larger product setups. You'll learn how to adapt your solutions for different industry verticals such as healthcare, social media, and retail. With this book, you'll: Understand the wide spectrum of problem statements, tasks, and solution approaches within NLP Implement and evaluate different NLP applications using machine learning and deep learning methods Fine-tune your NLP solution based on your business problem and industry vertical Evaluate various algorithms and approaches for NLP product tasks, datasets, and stages Produce software solutions following best practices around release, deployment, and DevOps for NLP systems Understand best practices, opportunities, and the roadmap for NLP from a business and product leader's perspective

Subject to Change Springer Science & Business Media

Though an increasing number of criminals are using computers and computer networks, few investigators are well versed in the issues related to digital evidence. This work explains how computer networks function and how they can be used in a crime.

Perspectives on Linguistic Pragmatics Cambridge University Press

More Food: Road to Survival is a comprehensive analysis of agricultural improvements which can be achieved through scientific methods. This reference book gives information about strategies for increasing plant productivity, comparisons of agricultural models, the role of epigenetic events on crop production, yield enhancing physiological events (photosynthesis, germination, seedling emergence, seed properties, etc.), tools enabling efficient exploration of genetic variability, domestication of new species, the detection or induction of drought resistance and apomixes and plant breeding enhancement (through molecularly assisted breeding, genetic engineering, genome editing and next generation sequencing). The book concludes with a case study for the improvement of small grain cereals. Readers will gain an understanding of the biotechnological tools and concepts central to sustainable agriculture More Food: Road to Survival is, therefore, an ideal reference for agriculture students and researchers as well as professionals involved sustainability studies.

Open Source Intelligence Tools and Resources Handbook CreateSpace

Now in its Sixth Edition, Surgical Recall allows for rapid-fire review of surgical clerkship material for third- or fourth-year medical students preparing for the USMLE and shelf exams. Written in a concise question-and-answer format—double-column, question on the left, answer on the right—Surgical Recall addresses both general surgery and surgical subspecialties. Students on rotation or being PIMPed can quickly refer to Surgical Recall for accurate and on-the-spot answers. The book includes survival tactics and tips for success on the boards and wards as well as key information for those new to the surgical suite.

Digital Evidence and Computer Crime Syracuse University Press

David Stifter's Sengoídelc (SHAN-goy-thelg) provides a comprehensive introduction to Old Irish grammar and metrics. As an introductory text to the Irish language spoken around the eighth century C.E., this essential volume, covering all aspects of the grammar in a clear and intuitive format, is ideally suited for use as a course book or as a guide for the independent learner. This handbook also will be an essential reference work for students of Indo-European philology and historical linguistics. Stifter leads the novice through the idiosyncrasies of the language, such as

initial mutations and the double inflection of verbs. Filled with translation exercises based on selections from Old Irish texts, the book provides a practical introduction to the language and its rich history. Sengóidélc opens the door to the fascinating world of Old Irish literature, famous not only for the Táin Bó Cúailnge (The Cattle Raid of Cúailnge) and its lyrical nature poetry but also as a major source for the political and legal history of Ireland. Stifter's step-by-step approach and engaging style make his book an ideal tool for both the self taught individual and the classroom environment. It will be of interest to beginning students of Old and Middle Irish, to scholars of Irish history, Celtic culture, and comparative linguistics, and to readers of Irish literature.

Etruscan Inscriptions Lippincott Williams & Wilkins

Marine Corps Warfighting Publication (MCWP) 3-16.7, Marine Artillery Survey Operations, sets forth the doctrinal foundation and technical information that Marines need to provide accurate and timely survey support.

The Student's Pali-English Dictionary Bentham Science Publishers

Two thousand years ago, Chinese scientists were looking for a medicine that would make them live forever. Instead, they blew up their lab and discovered gunpowder. Alfred Nobel blew up his laboratory twice before he discovered the formula for dynamite. Learn about the Apollo 13 and Challenger explosions and the strange space explosions caused by top secret Starfish Prime. These stories may sound twisted, but they're all true tales from science! Ages 9-12

Explosive Experiments Springer

throughout are many examples and hundreds of problems, and a separate 55-page section gives hints or complete solutions for most.

Battle for the Mind Springer

Whether readers are traveling by 4WD or camel, this acclaimed guide covers all aspects Saharan and includes 10,000 miles of itineraries in Morocco, Mauritania, Libya, Mali, Tunisia, Algeria, Niger, Chad, and Egypt.

The Life and Letters of St. Francis Xavier Dramatists Play Service Inc

This volume provides insight into linguistic pragmatics from the perspective of linguists who have been influenced by philosophy. Theory of Mind and perspectives on point of view are presented along with other topics including: semantics vs. semiotics, clinical pragmatics, explicatures, cancellability of explicatures, interactive language use, reference, common ground, presupposition, definiteness, logophoricity and point of view in connection with pragmatic inference, pragmemes and language games, pragmatics and artificial languages, the mechanism of the form/content correlation from a pragmatic point of view, amongst other issues relating to language use. Relevance Theory is introduced as an important framework, allowing readers to familiarize themselves with technical details and linguistic terminology. This book follows on from the first volume: both contain the work of world renowned experts who discuss theories relevant to pragmatics. Here, the relationship between semantics and pragmatics is explored: conversational explicatures are a way to bridge the gap in semantics between underdetermined logical forms and full propositional content. These volumes are written in an accessible way and work well both as a stimulus to further research and as a guide to less experienced researchers and students who would like to know more about this vast, complex, and difficult field of inquiry.
