While there is talk of the Fourth Industrial Revolution, old and new challenges bedevil the world – climate change, nutrition, and health poverty being at the top of the list. In seeking solutions to these and other problems which afflict the modern era, it is worthwhile to look into our collective past, to the traditions and knowledges of our ancestors. Such knowledge continues to exist in many parts of the world, though now marginalized by homogenous, Eurocentric ontology and epistemology. This book presents a compilation of reviews, case studies, and primary research attempting to locate the utility of traditional and Indigenous Knowledges in an increasingly complex world. It assembles chapter authors from across the world to tackle topics ranging from traditional knowledge-based innovations and commercialization, traditional medicine systems as practiced around the world, ethnoveterinary practices, and food innovation to traditional governance and leadership systems, among others. This book is an important resource for policymakers; scholars and researchers of cultural studies, leadership, governance, ethnobotany, anthropology, plant genetic resources and technology innovation; and readers interested in the history of knowledge and culture, as well as cultural activists and political scientists. Features: Unique combination of social science and anthropological aspects with natural science perspectives Includes summaries aimed at policymakers to immediately see what would be relevant to their work Combines case studies illuminating important lessons learned with reviews and primary data Multidisciplinary in the scope of the topics tackled and assemblage of contributors Global footprint with contributions from Africa, Europe, North America, Asia, and the West Indies David R. The third edition of this popular reader reflects considerable changes. The framework for understanding theory as a set of conversations over time is maintained and deepened, but Volume II

now begins with a focus on key transitional theorists who helped reconceive of classical theory in new ways. Extending from the classical tradition, chapters on race, gender, culture, media and globalization show how contemporary theory builds on the past even as it moves in new directions. New contextual and biographical materials surround the primary readings, and each chapter includes a study guide with key terms, discussion questions, and innovative classroom exercises. The result is a fresh and expansive take on social theory that foregrounds a plurality of perspectives and reflects contemporary trends in the field, while being an accessible and manageable teaching tool.

Providing a valuable overview of regionalism throughout the entire continent, Regionalism in Modern Europe combines both geographical and thematic approaches to examine the origins and development of regional movements and identities in Europe from 1890 to the present. A wide range of internationally renowned scholars from the USA, the UK and mainland Europe are brought together here in one volume to examine the historical roots of the current regional movements, and to explain why some of them - Scotland, Catalonia and Flanders, among others - evolve into nationalist movements and even strive for independence, while others - Brittany, Bavaria - do not. They look at how regional identities - through regional folklore, language, crafts, dishes, beverages and tourist attractions - were constructed during the 20th century and explore the relationship between national and subnational identities, as well as regional and local identities. The book also includes 7 images, 7 maps and useful end-of-chapter further reading lists. This is a crucial text for anyone keen to know more about the history of the topical - and at times controversial - subject of regionalism in modern Europe.
