Six Steps to Unleashing Your Potential John Wiley & Sons

This book applies systems thinking to treat project management in a systemic and systematic manner from a problem-solving perspective.

Considering the project as a system, the book discusses traditional project planning and organizing, as well as some neglected aspects of the project, namely how to prevent cost and schedule escalation, how to deal with change, recognize problems in time to prevent project failure and what to do when things go wrong during the implementation states of a project. This book provides you with a better understanding of the systems approach to

problem-solving and project management that will enable you to be more successful at managing projects. Features Treats projects as systems Presents project management as a problem-solving paradigm Discusses how to incorporate prevention into planning and how to show the value Describes what to do and how to cope with unanticipated problems that arise during the project implementation state Introduces new tools and techniques

The first edition of the Code of Practice for Project Management for Construction and Development, published in 1992, was groundbreaking in many ways. Now in its fifth edition, prepared by a multi-institute task force coordinated by the CIOB and including representatives from RICS, RIBA, ICE, APM and CIC, it continues to be the authoritative guide and reference to the principles

and practice of project management in construction and development. Good project management in construction relies on balancing the key constraints of time, quality and cost in the context of building functionality and the requirements for sustainability within the built environment. Thoroughly updated and restructured to reflect the challenges that the industry faces today, this edition continues to drive forward the practice of

construction project management. The principles of strategic planning, detailed programming and monitoring, resource allocation and effective risk management, widely used on projects of all sizes and complexity, are all fully covered. The integration of Building Information Modelling at each stage of the project life is a feature of this edition. In addition, the impact of trends and developments such as the internationalisation of construction projects and

the drive for sustainability are discussed in context. Code of Practice will be of particular value to clients, project management professionals and students of construction, as well as to the wider construction and development industries. Much of the information will also be relevant to project management professionals operating in other commercial spheres.

 Projects are ubiquitous to modern society, yet, concerns around successful delivery, value

realisation, resilience and making change stick force a significant re-evaluation of the scope and extent of the 'normal' project discourse. The common thread for all of this is around capabilities, skills, attitudes, values and perspectives that are needed for successful delivery and the sustained realisation of interest, relationships, benefit, value and impact. The chapters collated in this volume bring together leading authorities on topics that are relevant to the management,

leadership, governance and delivery of projects. Topics include people, communication, ethics, change management, value realisation, benefits, complexity, decision-making, project assurance, communication, knowledge management, big data, project requirements, business architecture, stakeholder engagement, strategy, users, systems thinking and resilience. The main aims of the collection are to reflect on the state of practice within the

discipline; to propose new extensions and additions to good practice; to offer new insights and perspectives; to distil new knowledge; and to provide a way of sampling a range of the most promising ideas, perspectives and styles of writing from some of the leading thinkers and practitioners in the discipline.

Technology and Public Management CRC Press  
Not long ago project management was perceived as a highly technical endeavor with

applications to highly specialized industries. Times have changed-and so have the collective perceptions about project management. Today project management skills are applied throughout a wide range of businesses and industries. Successful project managers are defined now not only by their skill in dealing with issues of planning, scheduling, and budgeting, but also by their ability to manage people. Clifford Gray and Erik Larson, both of Oregon State University,

are aware of this evolution and have used the Third Edition of Project Management: The Managerial Process to address these shifts. This highly-qualified author team provides readers with a complete picture of project management. Technical issues are addressed thoroughly, but unlike similar books on this subject, Project Management: The Managerial Process presents them in context, demonstrating how project management techniques can be applied

in a wide variety of businesses, while emphasizing the importance of accounting for the human element in the successful management of all types of projects. Case studies and "Snapshot from Practice" boxes are among the ways readers learn throughout this text. A pedagogically rich CD-ROM, and a second CD-ROM containing a trial version of Microsoft Project, are also available with all new copies of this text. Once again, the authors have succeeded

in providing readers with a complete picture of project management: not only "what to do" and "how to do it," but also why it is done. Book jacket.

When we look at a program or a project, to identify its size in terms of 'large', it would be advisable to consider a few factors that determine the size i.e.,

effort, uncertainty and complexity involved in delivering the outcome. This book is intended to provide the required lateral thinking in this field of management excellence.

The world economy in which we are living poses challenges that lead to a realization that 'more of the same' will be difficult to sustain. This provides an illustration that, in order to create new or modified knowledge practices, strengthen

customer relationships and thus positively influence customer satisfaction, organizations must be flexible in configuring (combining) knowledge and knowledge structures in a way that is appropriate for delivering value to the customer. It must simultaneously develop effective strategies for updating the knowledge of its staff members necessary for underpinning the creation and delivery of appropriate knowledge services. Thus, unlearning (forgetting) becomes a

critical means for organizational success. The ECKM community of scholars has already initiated dialogue that links its particular strengths to innovation issues. This conference aims to further that dialogue by attracting leading edge work that leverages the ECKM community's in-depth understanding of learning and unlearning to better understand knowledge management. Our aim is to stimulate breakthrough research streams linking learning, unlearning and

knowledge management. How can organizations tailor, use, and extend techniques and tools from knowledge management for improving their business practices and processes? Building upon existing work on knowledge management (KM) and organizational learning, the conference will promote interdisciplinary approaches from computer science and information systems, business, management and organization science as well as cognitive

science. Emphasis will be put on systematic learning from experience, KM tools and KM success factors. A special interest belongs to knowledge management initiatives which are lightweight (i.e., do not place considerable additional burden on users and KM experts), allow an incremental adoption (i.e., do not require large up-front investment before any return of investment is at least visible), and are flexible regarding frequent changes in experts and topics.

Continuing the success of the ECKM conference series since 2000, the 2015 conference will provide an international communication forum bringing together academia and industry for discussing the progress made and addressing the challenges faced by continuous learning in knowledge-intensive organizations.
