Milestones

The 'Longman Science
11-14' series aims to
put science into
context both
historically and in the
modern world as well
as reinforcing and
consolidating learning
through questions,

summaries and investigation ideas.

IAH: International Contributions to Hydrogeology, 26

Springer

Comprising a pupil's book, teacher's guide and copymaster file for each year, this series covers all of the Sc1 to Sc4 requirements and incorporates the ideas and evidence statements of the revised National Curriculum (formerly part of Sc0). The course also supports the content and approach of the QCA Scheme of Work.

Data Mining

Algorithms Ministerio de Educación

There's something in the earth deep below Elise Kavanagh's territory. A shadow is falling upon local demons to devour their flesh and harvest their souls. And it's coming for Elise next. The Union has an easy way out. They want to send Elise into hiding again with her former partner, James Faulkner. All she has to do is surrender the territory and trust that they can protect the ethereal ruins, the dark gate, and the city she's come to know as home. Greater powers have other plans for Elise and her fabled power as Godslayer—plans that mean surrendering her life and blood to the most powerful demon alive. But if she descends, there's no turning back. Once she

gazes into the abyss, it will gaze back into her...and Elise will be damned forever.

Exploring Science

Longman

This book introduces readers to the lattice Boltzmann method (LBM) for solving transport phenomena – flow, heat and mass transfer – in a systematic way.

Providing explanatory computer codes throughout the book, the author guides readers through many practical examples, such as:

- flow in isothermal and non-isothermal lid-driven cavities;
- flow over obstacles;
- forced flow through a heated channel;
- conjugate forced convection; and
- natural convection.

Diffusion and advection-diffusion equations are

discussed, together with applications and examples, and complete computer codes accompany the sections on single and multi-relaxation-time methods. The codes are written in MatLab. However, the codes are written in a way that can be easily converted to other languages, such as FORTRAN, Python, Julia, etc. The codes can also be extended with little effort to multi-phase and multi-physics, provided the physics of the respective problem are known. The second edition of this book adds new chapters, and includes new theory and applications. It discusses a wealth of practical examples, and explains LBM in connection with

various engineering topics, especially the transport of mass, momentum, energy and molecular species. This book offers a useful and easy-to-follow guide for readers with some prior experience with advanced mathematics and physics, and will be of interest to all researchers and other readers who wish to learn how to apply LBM to engineering and industrial problems. It can also be used as a textbook for advanced undergraduate or graduate courses on computational transport phenomena

Selective Bioseparation by Magnetic Particles
John Wiley & Sons

Despite ongoing progress in nano- and biomaterial sciences, large scale bioprocessing of

nanoparticles remains a great challenge, especially because of the difficulties in removing unwanted elements during processing in food, pharmaceutical and feed industry at production level. This book presents magnetic nanoparticles and a novel technology for the upscaling of protein separation. The results come from the EU Project "MagPro2Life", which was conducted in cooperation of several european institutions and companies.

Integrated Curriculum for Secondary Education English - Years 1 and 2
Routledge

One of the Penguin English "Test your" guides, this book provides 60 tests, motivating, varied

language practice with gap-fills, multiple choice, matching exercises, cartoons and more. They can be used either for self-study or in class. An answer key is provided.

Method OUP Oxford

The MEC/BC bilingual project, initiated in 1996 in primary as a unique experiment within the Spanish state education system, and in September 2004 the classes that had started their bilingual education 8 years earlier took the project forward into Secondary schools. The formal agreement between the MEC/BC states that the aim of the project is to provide students from the age of three to sixteen with a bilingual, bicultural education through an

integrated Spanish/English curriculum based on the Spanish National Curriculum and aspects of the National Curriculum for England and Wales. The implantation of such a curriculum requires, firstly, with regard to English as a subject, a very different classroom approach from the traditional EFL classroom where the focus is on learning English as a foreign language; secondly, a similar new methodology for teaching and learning other curricular areas through English. Such an integrated approach sits very positively within the Directives of the Council of Europe which insists on the need for students to be competent in three European languages by

the end of the obligatory period of Secondary Education and that the learning of the first foreign language should begin in the early years of formal education. In addition to this, the secondary integrated curricula have consistently focused on the continuing development of students' skills and learning strategies, thus firmly establishing learning as a lifelong process. The specific objectives of the Project in the Secondary education level are to: continue the acquisition and learning of both languages through an integrated content-based curriculum, encourage awareness and understanding of the diversity of both cultures, facilitate the

exchange of teachers and students, encourage the use of modern technologies in learning other languages, promote the certification of studies under both educational systems, if and when appropriate. Cambridge IGCSE Mathematics Core and Extended Workbook Civitas/Inst for the Study of
Get your best grades with this Cambridge International AS and A Level Accounting Revision Guide. - Manage your own revision with step-by-step support from experienced examiners Ian Harrison and Michael Hillman - Maintain an appropriate international focus in exams with examples and case studies from around the world - Get

the top marks by applying accounting terms accurately with the help of definitions and key words Use the Revision Guide to prepare for the big day: - Plan and pace your revision with the revision planner- Use the expert tips to clarify key points - Avoid making typical mistakes with expert advice - Test yourself with rapid-fire questions and answers and tick off each topic as you complete it - Practise your exam skills with exam-style questions Also available: Cambridge International AS and A Level Accounting textbook by Ian Harrison (ISBN: 9781444181432). Science Success: Copymasters Bright Sparks

The importance of investigating karstified aquifers lies in their significance as a major source of drinking water. This book describes methods that are basic to all hydrogeological studies, such as hydraulic investigations, hydrochemistry, geophysics, isotope chemistry and modelling, but with the emphasis placed on their application to karst systems. Other techniques are specific to the karst environment, such as the speleological exploration of aquifers and water tracing. The various chapters of this

book are written by experts in different methods. Most of the chapters are multi-authored, and the authors include hydrogeologists who are experienced in evaluating a variety of karst environments and who together, provide a comprehensive review of karst methods.

Primary Geography is a complete six year course that provides an engaging introduction

to the subject. Using real life examples from around the globe, the course covers both human and physical geography, from the basics of mapping to current hot topics such as how to meet the resource needs of the world's population.

Exploring Science

Longman

The authors of this book examine the British National Curriculum from several different perspectives and concentrate on various subject areas. The uniting theme between these essays is the argument that the subjects in the school curriculum used to be regarded as discrete areas of knowledge which would be imparted to pupils by teachers motivated by a love of learning, but

that this has not been enough for recent governments who see schools as a means of promoting social and political goals that may or may not relate to traditional academic disciplines. The contributors to this book argue that we need to return to the traditional view of education as a means of transmitting a body of knowledge from one generation to the next, and that academic rigour and respect for the professionalism of teachers should take precedence over political manipulation of the curriculum.

Exciting, real-world 11-14 science that builds a base for

International GCSEs
Pearson's popular 11-14 Exploring Science course - loved by teachers for its exciting, real-world science - inspires the next generation of scientists. With brand-new content, this 2019 International edition builds a base for progression to International GCSE Sciences and fully covers the content of the 13+ Common Entrance Exam. Exciting, real-world science that inspires the next generation of scientists. Explore real-life science that learners can relate to, with stunning videos and photographs. Provides content for a broad and balanced science curriculum, while building the skills needed for International GCSE

sciences and the 13+ Common Entrance Exam. Choose from two Student Book course options to match the way your school teaches 11-14 science. The Student Books are arranged by year (Year 7, 8 and 9) or by science (biology, chemistry, physics). This Student Book contains all Year 8 biology, chemistry and physics content. Learn more about this series, and access free samples, on our website: www.pearsonschools.co.uk/ExploringScienceInternational.
