CHAPTER 1 BASIC CONCEPTS - AI Akhawayn University Mathematical Logic Basic Concepts LogicalAn informal introduction to the basic concepts and techniques used in mathematical logic: sets, functions, propositional logic, predicate logic, representing English sentences in logical notation, proofs, and mathematical induction. Required Text Robert Wall, An Introduction to Mathematical Linguistics. Course RequirementsBasic Concepts in Mathematical LogicChapter 1: Basic Concepts 3 treats all of these things in terms of a single sort of thing – statements . Logic corre- spondingly treats inferences in terms of collections of statements, which are called arguments . The word ‘argument’ has a number of meanings in ordinary English.BASIC CONCEPTS OF LOGIC - UMassMATHEMATICAL LOGIC Basic Concepts: numerical systems binary octal hexadecimal truth tables Boolean algebra arithmetics and geometric progressions logical sequences logical reasoning gate arrangements Paperback – September 14, 2017MATHEMATICAL LOGIC Basic Concepts: numerical systems ...Mathematical logic is a subfield of

mathematics exploring the applications of formal logic to mathematics. It bears close connections to metamathematics, the foundations of mathematics, and theoretical computer science. The unifying themes in mathematical logic include the study of the expressive power of formal systems and the deductive power of formal proof systems. Mathematical logic is often divided into the fields of set theory, model theory, recursion theory, and proof theory. The main thrust of logic, however, shifted to computability and related concepts, models and semantic structures, expressiveness, extensions of classical logic for other situations, and the study of logical systems as subjects of interest in their own right.Logic Terms and ConceptsToday we introduce propositional logic. This chapter discusses the most elementary branch of mathematical logic, that is, the sentential logic or the propositional calculus. This branch of logic has to do with the logical properties of the various forms of sentential composition, by means of which sentences are joined together to result in compound sentences. Mathematical Logic and Formalized Theories | ScienceDirect To define logical equivalence. To construct a truth table for several compound statements to determine which two are logically equivalent. To recognize that the biconditional of two equivalent statements is a tautology. Practice Exercises: To complete 10 additional exercises as practice with mathematical logic. CONCEPTS TYPES OF LOGIC Logic is primarily concerned with distinguishing correct reasoning from reasoning that is incorrect. It is most closely related to rhetoric which also deals with the reasoning process.
