A high level of literacy in both print and digital media is required for negotiating most aspects of 21st-century life, including supporting a family, education, health, civic participation, and competitiveness in the global economy. Yet, more than 90 million U.S. adults lack adequate literacy. Furthermore, only 38 percent of U.S. 12th graders are at or above proficient in reading. Improving Adult Literacy Instruction synthesizes the research on literacy and learning to improve literacy instruction in the United States and to recommend a more systemic approach to research, practice, and policy. The book focuses on individuals ages 16 and older who are not in K-12 education. It identifies factors that affect literacy development in adolescence and adulthood in general, and examines their implications for strengthening literacy instruction for this population. It also discusses technologies for learning that can assist with multiple aspects of teaching, assessment, and accommodations for learning. There is inadequate knowledge about effective instructional practices and a need for better assessment and ongoing monitoring of adult students' proficiencies, weaknesses, instructional environments, and progress, which might guide instructional planning. Improving Adult Literacy Instruction recommends a program of research and innovation to validate, identify the boundaries of, and extend current knowledge to improve instruction for adults and adolescents outside school. The book is a valuable resource for curriculum developers, federal agencies such as the Department of Education, administrators, educators, and funding agencies.

Problems are a central part of human life. The Psychology of Problem Solving organizes in one volume much of what psychologists know about problem solving and the factors that contribute to its success or failure. There are chapters by leading experts in this field, including Miriam Bassok, Randall Engle, Anders Ericsson, Arthur Graesser, Keith Stanovich, Norbert Schwarz, and Barry Zimmerman, among others. The Psychology of Problem Solving is divided into four parts. Following an introduction that reviews the nature of problems and the history and methods of the field, Part II focuses on individual differences in, and the influence of, the abilities and skills that humans bring to problem situations. Part III examines motivational and emotional states and cognitive strategies that influence problem solving performance, while Part IV summarizes and integrates the various views

of problem solving proposed in the preceding chapters.

"Steam heating systems come in many varieties and sizes. Steam systems need regular maintenance, or small problems will occur. When the small problems are not addressed, they will cause other small problems to arise. A large steam heating system with scores of small problems will not heat properly and fuel consumption can increase dramatically, but worst of all, the banging in these systems, as my mentor would say, is like the 'hammers of hell.'" Jacob (Jake) Myron wrote this book as an easy-to-understand self-help guide for those in the occupation dealing with steam systems. He feels a huge gratitude to this industry, and he shares his over forty years of successful experience in this book to give something back to his beloved profession and colleagues.

How should research and new ways of thinking about violence improve its measurement? Could improved measurement change policy? The book is a guide to how the measurement of violence can be best achieved. It shows how to make femicide, rape, domestic violence, and FGM visible in official statistics. It offers practical guidance on definitions, indicators and coordination mechanisms. It reflects on theoretical debates on 'what is gender', 'what is violence', and 'the concept of coercive control', and introduces the concept of 'gender saturated context'. Analysing the socially constructed nature of statistics and the links between knowledge and power, it sets new standards and guidelines to influence the measurement of violence in the coming decades.

Standards for the Growing, Harvesting, Packing, and Holding of Produce for Human Consumption (US Food and Drug Administration Regulation) (FDA) (2018 Edition) The Law Library presents the complete text of the Standards for the Growing, Harvesting, Packing, and Holding of Produce for Human Consumption (US Food and Drug Administration Regulation) (FDA) (2018 Edition). Updated as of May 29, 2018 To minimize the risk of serious adverse health consequences or death from consumption of contaminated produce, the Food and Drug Administration (FDA or we) is establishing science-based minimum standards for the safe growing, harvesting, packing, and holding of produce, meaning fruits and vegetables grown for human consumption. FDA is establishing these standards as part of our implementation of the FDA Food Safety and Modernization Act. These

standards do not apply to produce that is rarely consumed raw, produce for personal or on-farm consumption, or produce that is not a raw agricultural commodity. In addition, produce that receives commercial processing that adequately reduces the presence of microorganisms of public health significance is eligible for exemption from the requirements of this rule. The rule sets forth procedures, processes, and practices that minimize the risk of serious adverse health consequences or death, including those reasonably necessary to prevent the introduction of known or reasonably foreseeable biological hazards into or onto produce and to provide reasonable assurances that the produce is not adulterated on account of such hazards. We expect the rule to reduce foodborne illness associated with the consumption of contaminated produce. This book contains: - The complete text of the Standards for the Growing, Harvesting, Packing, and Holding of Produce for Human Consumption (US Food and Drug Administration Regulation) (FDA) (2018 Edition) - A table of contents with the page number of each section

Femicide, the killing of women and girls because of their gender, was until recently included in the category 'homicide', obscuring the special features of this social and gendered phenomenon. However, the majority of murders of women are perpetrated by men whom they know from family ties and are the result of intimate partner violence or so-called 'honour' killings. This book is the first one on femicide in Europe and presents the findings of a four-year project discussing various aspects of femicide. Written by leading international scholars with an interdisciplinary perspective, it looks at the prevention programmes and comparative quantitative and qualitative data collection, as well as the impact of culture. It proposes the establishment of a European Observatory on Femicide as a new direction for the future, showing the benefits of cross-national collaboration, united to prevent the murder of women and girls.
