"It may be that I have stumbled upon an adequate description of life itself." These modest yet profound words trumpet an imminent paradigm shift in scientific, economic, and technological thinking.

In the tradition of Schrödinger's classic *What Is Life?*, Kauffman's *Investigations* is a tour-de-force exploration of the very essence of life itself, with conclusions that radically undermine the scientific approaches on which modern science rests--the approaches of Newton, Boltzman, Bohr, and Einstein. Building on his pivotal ideas about order and evolution in complex life systems, Kauffman finds that classical science does not take into account that physical systems--such as people in a biosphere--effect their dynamic environments in addition to being affected by them. These systems act on their own behalf as autonomous agents, but what defines them

as such? In other words, what is life? Kauffman supplies a novel answer that goes beyond traditional scientific thinking by defining and explaining autonomous agents and work in the contexts of thermodynamics and of information theory. Much of *Investigations* unpacks the progressively surprising implications of his definition. Significantly, he sets the stages for a technological revolution in the coming decades. Scientists and engineers may soon seek to create autonomous agents--both organic and mechanical--that can not only construct things and work, but also reproduce themselves! Kauffman

also lays out a foundation for a new concept of organization, and explores the requirements for the emergence of a general biology that will transcend terrestrial biology to seek laws governing biospheres anywhere in the cosmos. Moreover, he presents four candidate laws to explain how autonomous agents co-create their biosphere and the startling idea of a "co-creating" cosmos. A showcase of Kauffman's most fundamental and significant ideas, *Investigations* presents a new way of thinking about the fundamentals of general biology that will change the way we understand life itself--on this planet and

anywhere else in the cosmos.

The final installment of enVisionMATH, Grade 6, ensures that your child has a solid understanding of fundamental math concepts. This curriculum for homeschooling features a host of math activities that provide hands-on education for your child. Furthermore, the

materials use pictures and graphs to cater to visual learning styles. Whether your child likes to try math problems to better grasp the concepts you teach or use visual aids, enVisionMATH will help him or her excel. When you select enVisionMATH: Grade 6, you'll get all the tools you need to create dynamic and interesting lesson plans. This program is organized by math concept. Over time your child will learn to:

- Understand the concept of ratios.
- Multiply and divide using fractions. Apply prior math knowledge to rational and irrational numbers.
- Solve algebraic equations that use a single variable.
- Differentiate between dependent and

- independent variables.
- Solve area equations for 3-D shapes.
- Understand and use absolute value. Use graphs to explain distribution.
- Comprehend and use median, mode, range, minimum, maximum and mean.

enVisionMATH: Grade 6 will also further develop your child's problem-solving skills and improve his or her quantitative- and abstract -thinking abilities. The information and skills your child gleans from this curriculum, and the lessons you teach with it, will help him or her in other subject areas as well. The Grade 6 curriculum transitions smoothly from Grade 5, ensuring your child is ready to move to the next math level. Independent

scientific research has proven that the enVisionMATH series is successful in teaching math education. When you use this set, you know you'll be helping your child achieve his or her learning goals. For more information on the specific materials included in enVisionMATH: Grade 6, visit the Features and Benefits page.
