Displacement, Diaspora, and Geographies of Identity challenges conventional understandings of identity based on notions of nation and culture as bounded or discrete. Through careful examinations of various transnational, hybrid, border, and diasporic forces and practices,

these essays push at the edge of cultural studies, postmodernism, and postcolonial theory and raise crucial questions about ethnographic methodology. This volume exemplifies a cross-disciplinary cultural studies and a concept of culture rooted in lived experience as well as textual readings. Anthropologists and scholars from related fields deploy a range of methodologies

and styles of writing to blur and complicate conventional dualisms between authors and subjects of research, home and away, center and periphery, and first and third world. Essays discuss topics such as Rai, a North African pop music viewed as westernized in Algeria and as Arab music in France; the place of Sephardic and Palestinian writers within Israel's Ashkenazic-dominated

arts community; and the use and misuse of the concept "postcolonial" as it is applied in various regional contexts. In exploring histories of displacement and geographies of identity, these essays call for the reconceptualization of theoretical binarisms such as modern and postmodern, colonial and postcolonial. It will be of interest to a broad spectrum of scholars and

students concerned with postmodern and postcolonial theory, ethnography, anthropology, and cultural studies.

The basic goal of the volume is to compile the most up to date research on how high altitude affects the behavior, ecology, evolution and conservation status of primates, especially in comparison to lowland populations. Historically, the majority of primate studies have focused on lowland populations. However, as the lowlands

have been disappearing, more and more primatologists have begun studying populations located in higher altitudes. High altitude populations are important not only because of their uniqueness, but also because they highlight the range of primate adaptability and the complex variables that are involved in primate evolution. These populations

are good examples of how geographic scales result in diversification and/or speciation. Yet, there have been very few papers addressing how this high altitude environment affects the behavior, ecology, and conservation status of these primates. There is a common but often unspoken arrogance on the part of outside observers that folk science and traditional knowledge—the type developed by Native communities and tribal groups—is inferior to the “formal science” practiced by Westerners. In this lucidly written and humanistic account of the O’odham tribes of Arizona and Northwest

Mexico, ethnobiologist Amadeo M. Rea exposes the limitations of this assumption by exploring the rich ornithology that these tribes have generated about the birds that are native to their region. He shows how these peoples' observational knowledge provides insights into the behaviors, mating habits, migratory patterns, and distribution of local bird species, and he uncovers the various

ways that this knowledge is incorporated into the communities' traditions and esoteric belief systems. Drawing on more than four decades of field and textual research along with hundreds of interviews with tribe members, Rea identifies how birds are incorporated, both symbolically and practically, into Piman legends, songs, art, religion, and ceremonies. Through

highly detailed descriptions and accounts loaded with Native voice, this book is the definitive study of folk ornithology. It also provides valuable data for scholars of linguistics and North American Native studies, and it makes a significant contribution to our understanding of how humans make sense of their world. It will be of interest to historians of science, anthropologists, and scholars of

indigenous cultures and folk taxonomy.

The link between private corporations

and U.S. world power has a much longer history than most people realize.

Transnational firms such as the United Fruit Company represent an earlier stage of the economic and cultural globalization now taking place throughout the world.

Drawing on a wide range of archival sources in the United States, Great Britain, Costa Rica, and Guatemala, Colby combines "top-down"

and "bottom-up" approaches to provide new insight into the role of transnational capital, labor migration, and racial nationalism in shaping U.S. expansion into Central America and the greater Caribbean. The Business of Empire places corporate power and local context at the heart of U.S. imperial history. In the early twentieth century, U.S. influence in Central America came

primarily in the form of private enterprise, above all United Fruit. Founded amid the U.S. leap into overseas empire, the company initially depended upon British West Indian laborers. When its black workforce resisted white American authority, the firm adopted a strategy of labor division by recruiting Hispanic migrants. This labor system drew the company into increased conflict with

its host nations, as Central American nationalists denounced not only U.S. military interventions in the region but also American employment of black immigrants. By the 1930s, just as Washington renounced military intervention in Latin America, United Fruit pursued its own Good Neighbor Policy, which brought a reduction in its corporate colonial power and a ban on

the hiring of black immigrants. The end of the company's system of labor division in turn pointed the way to the transformation of United Fruit as well as the broader U.S. empire.  Powerful pharaohs, deadly curses, beautiful queens, legendary cities, tombs filled with gold ... you'll know it all by the time you finish this smart and wacky book!

Did you know that ancient Egyptians formed the world's first police force? The 365-day calendar? We have ancient Egypt to thank for that, too! And the next time your parents tell you to brush your teeth, you can tell them that ancient Egyptians invented the first toothbrush and toothpaste. In this cool book, you'll find out what life was like 3,000 years ago along the banks of the

Nile River, explore the lives of famous pharaohs determined to leave their mark no matter the cost, and get the lowdown on famous battles for power. Discover weird facts about famous people, from Cleopatra to King Tut--and about famous places, from Alexandria to Thebes. It's a must-have for all budding Egyptologists, archaeologists, or kids who want to be in-the-know about this

fascinating civilization!

In every region of Latin America there are sacred shrines that draw tens of thousands of pilgrims. At present, most of these pilgrimages are overtly Catholic, but the roots of the contemporary practice are numerous: European Christian, indigenous pre-

Columbian, African slave, and other religious traditions. This volume explores the historical development, range of diversity, and the structure and impacts of pilgrimage in Latin America. It is among the first to create a general framework for understanding this religious practice. Although the contributors' focus is predominantly anthropological, analytical perspectives are drawn from

numerous disciplines. *The Business of Empire* UNAM
This handbook explores the history of mathematics, addressing what mathematics has been and what it has meant to practise it. 36 self-contained chapters provide a fascinating overview of 5000 years of mathematics and its key cultures for academics in mathematics, historians of science, and general historians.

It explores how Armenian, Byzantine/Greek, Florentine, Genoese,

Hospitaller, Jewish, Mamluk, and Venetian communities characterized by diasporic identities and inserted into local contexts navigated religious and socio-ethnic boundaries as well as other categories of difference. The volume draws on a wide range of historical and social-scientific methods and offers new perspectives on the arbitration of difference in the wider eastern Mediterranean

from Tana to Cairo and Marseille to Isfahan prior to the emergence of nation states. It provides not only an analytical toolbox for historical diaspora studies but also reveals how, under the looming threat of crusade and within the daily routines of trade, diasporic groups and their hosts negotiated modes of coexistence that oscillated between cooperation and conflict,

integration and rejection, union and separation.
