An Introduction to NURBS Page - NAR Associates Alias NURBS allows the user to sculpt any shape, and is typically used for freeform, sculptural designs that can't be defined by dimensions or geometry. Primary Interaction: aesthetic, artistic, sculptural choices of shape and form. NURBS Introduction NURBS++ generates two types of standard curves automatically: a circle or a line. You can create a circle centered at (0;0;0) of radius 1 and having a starting and ending angle of 0 and 2° respectively. Since a NURBS curve is rational, it can represent exactly a circle. NURBS: An Introduction An introduction to NURBS Philippe Lavoie January 20, 1999 A three dimensional (3D) object is composed of curves and surfaces. One must find a way to represent these to be able to model accurately an object. The two most common methods to represent a curve or a surface are the implicit and the parametric method. An introduction to NURBS - formpig Non-uniform rational basis spline (NURBS) is a mathematical model commonly used in computer graphics for generating and representing curves and surfaces. It offers great flexibility and precision for handling both analytic (surfaces defined by common mathematical formulae) and modeled shapes. NURBS are commonly used in computer-aided design (CAD), manufacturing (CAM), and engineering (CAE) and are part of numerous industry wide standards, such as IGES, STEP, ACIS, and PHIGS. The algorithms are implementations of the pseudocode in Appendix C of An Introduction to NURBS. Here the algorithms have been loosely translated into a 'real' programming language, i.e., C. Hopefully, the availability of the algorithms in C will increase your understanding of the algorithms and hence of the underlying mathematics.
