Social Skills Matter!, Grades PK - 2 AAPC

I am a fifth grade teacher in an urban charter school working with "at risk" students with social behavioral problems. I wanted to know how to create community with in the classroom because I feel a safe and welcoming atmosphere is necessary for students to learn. I wondered if student interactions would become more positive with the teaching of social skills. My research question was, "What is the impact of teaching social skills in an urban fifth grade classroom?" Several researchers have influenced and supported my interest in teaching social skills. McGinnis and Goldstein (1997) suggested schools needed to create opportunities for students to participate in

rule setting and to accept responsibility; students must be taught the skills necessary for prosocial participation in these activities. Jackson, Jackson and Monroe (1983) believe social skill training programs are needed because many children do not acquire critically important social abilities without them. Charney (2002) stresses teachers need to establish an on going curriculum in self-control, social participation, and human development. Lane, Menzies, Barton-Arwood, Doukas, and Munton (2005) state social skills are a necessary component of a student's educational and social success. McGinnis, Jackson, Charney and Lane are just a few researchers that influenced and supported my interest in teaching social

skills. I action researched by teaching social skills to my fifth grade students using "Skillstreaming the Elementary School Child: New Strategies and Perspectives for Teaching Prosocial Skills" by McGinnis and Goldstein as my curriculum. I implemented my action research plan in ten days. The first and last days were spent giving a questionnaire survey. The rest of the days I taught the social skills: listening, problem solving, dealing with anger, and apologizing in eight forty-five minute lessons. Two days per social skill. The data I collected was student opinions from the questionnaire surveys and observations before, during, and after the teaching of social skills. I wanted to know if teaching the social skill lessons would have an impact on the students' interactions with each other. The results of the surveys were less dramatic than desired. Ideally, I wanted to see all students increase their use of social skills I taught. Listening increased, problem solving and apologizing stayed the same, and anger management decreased. In the students' opinions, problem solving, dealing with anger, and apologizing were the most useful skills to learn. From my observations, problem solving was the most useful and utilized social skill used by the students. I had two predictions for the outcomes of my study. One prediction was that teaching my students social skills would improve their interactions with each other. The other prediction was improved student interaction would create a stronger learning community, thus creating more time for learning. In my opinion, both of my predictions were accurate. According to my observations, student interactions and time for instruction did improve.

One of the most important yet difficult skills for children with autism to learn is effective social interaction. This book introduces social skills programs to parents of preschool- and kindergarten-aged children diagnosed with one of the Pervasive Developmental Disorders (PDD), including Autistic Disorder, Asperger's Disorder, and PDD: Not Otherwise Specified. The book is based on the authors' decades of clinical experience using Applied Behavior Analysis (ABA), a proven educational method, to teach social skills at home and school. This book focuses on four broad topics: play skills; the language of social skills; understanding another person's perspective; functioning in an inclusive classroom. This book helps parents to work with their child's strengths to improve social skills. Following the suggestions and exercises in this book, parents can teach children to: pretend-play, use toys appropriately, know when to use conventional responses like -- excuse me -- tell jokes, recognise that others' feelings and thoughts are different from their own, and initiate social interaction with peers. Included are tips for using games, modelling, rewards, role play, videos, activity schedules, and social stories to teach social skills and make the learning experience fun for parents and children. A case study of one family's efforts and successes provides a real-life example that's informative and reassuring. Appendices listing resources such as books, games, and activities give parents additional material to explore.
