Designed to make life a little easier by providing all the theoretical background necessary to understand sound reproduction, backed up with practical examples. Specialist terms - both musical and physical - are defined as they occur and plain English is used throughout. Analog and digital audio are considered as alternatives, and the advantages of both are stressed. Audio is only as good as the transducers employed, and consequently microphone and loudspeaker technology also feature heavily - making this the most comprehensive, up-to-date text currently available on all aspects of sound reproduction.

This open access book offers a timely guide to challenges and current practices to permanently plug and abandon hydrocarbon wells. With a focus on offshore North Sea, it analyzes the process of plug and abandonment of hydrocarbon wells through the establishment of permanent well barriers. It provides the reader with extensive knowledge on the type of barriers, their functioning and verification. It then discusses plug and abandonment methodologies, analyzing different types of permanent plugging materials. Last, it describes some tests for verifying the integrity and functionality of installed permanent barriers. The book offers a comprehensive reference guide to well plugging and abandonment (P&A) and well integrity testing. The book also presents new technologies that have been proposed to be used in plugging and abandoning of wells, which might be game-changing technologies, but they are still in laboratory or testing level. Given its scope, it addresses students and researchers in both academia and industry. It also provides information for engineers who work in petroleum industry and should be familiarized with P&A of hydrocarbon wells to reduce the time of P&A by considering it during well planning and construction.

*Post-Cinematic Affect* is about what it feels like to live in the affluent West in the early 21st century. Specifically, it explores the structure of feeling that is emerging today in tandem with new digital technologies, together with economic globalization and the financialization of more and more human activities. The 20th century was the age of film and television; these dominant media shaped and reflected our cultural sensibilities. In the 21st century, new digital media help to shape and reflect new forms of sensibility. Movies (moving image and sound works) continue to be made, but they have adopted new formal strategies, they are viewed under massively changed conditions, and they address their spectators in different ways than was the case in the 20th century. The book traces these changes, focusing on four recent moving-image works: Nick Hooker's music video for Grace Jones' song *Corporate Cannibal*; Olivier Assayas' movie *Boarding Gate*, starring Asia Argento; Richard Kelly's movie *Southland Tales*, featuring Justin Timberlake, Dwayne Johnson, and other pop culture celebrities; and Mark Neveldine and Brian Taylor's *Gamer*.

Microfluidics is a young and rapidly expanding scientific discipline, which deals with fluids and solutions in miniaturized systems, the so-called lab-on-a-chip systems. It has applications in chemical engineering, pharmaceuticals, biotechnology and medicine. As the lab-on-a-chip systems grow in complexity, a proper theoretical understanding becomes increasingly important. The basic idea of the book is to provide a self-contained formulation of the theoretical framework of microfluidics, and at the same time give physical motivation and examples from lab-on-a-chip technology. After three chapters introducing microfluidics, the governing equations for mass, momentum and energy, and some basic flow solutions, the following 14 chapters treat hydraulic resistance/compliance, diffusion/dispersion, time-dependent flow, capillarity, electro- and magneto-hydrodynamics, thermal transport, two-phase flow, complex flow patterns and acousto-fluidics, as well as the new fields of opto- and nano-fluidics.

Throughout the book simple models with analytical solutions are presented to provide the student with a thorough physical understanding of order of magnitudes and various selected microfluidic phenomena and devices. The book grew out of a set of well-tested lecture notes. It is with its many pedagogical exercises designed as a textbook for an advanced undergraduate or first-year graduate course. It is also well suited for self-study.

Don McCullin's reputation as the greatest photographer of conflict has been replaced in recent years with an image of McCullin as the great traveller. He is now as familiar with the remoter parts of the globe as he was once accustomed to life in the war zone. His most ambitious journey has been to explore the fringes of the Roman empire. *Southern Frontiers* is divided into two parts. The first, *The Levant*, includes the ruins of Baalbek in the Lebanon, Palmyra in Syria and Jirash in Jordan. The second part, *The Moghreb*, covers a sweeping journey through the North African

coastal countries Morocco, Algeria, Tunisia and Libya, where he has photographed the great ruins of Leptus Magna. McCullin's photographs, taken on a large format camera, are evocative of the views of distinguished nineteenth-century predecessors who came with sketchbooks and paints. The book is produced in an appropriate large album format. Texts on each of the sites have been written by Barnaby Rogerson, an authority on the Roman empire. The book will include an introduction by McCullin himself. [Labyrinth Lost](#) Springer Science & Business Media
