The Dynamic Systems & Controls area focuses on principles and methods for designing and controlling engineered and natural systems. A broad-based perspective inspires a creative engineering approach to applications involving systems comprised of multiple interacting energetic devices or processes having a wide range of spatial and temporal scales. Dynamic Systems and Control - Mechanical Engineering Engineering system dynamics focus on deriving mathematical models based on simplified physical representations of actual systems, such as mechanical, electrical, fluid, or thermal, and on solving the mathematical models. The resulting solution is utilized in design or analysis before producing and testing the actual system. System Dynamics for
