The Canadian Guide to Clinical Preventive Health Care McGraw Hill Professional

Now revised and expanded to include cutting-edge acceptance-based techniques and a new focus on inhibitory learning, this is the leading guide to therapeutic exposure, a crucial element of evidence-based psychological treatments for anxiety. The book helps the clinician gain skills and confidence for implementing exposure successfully and tailoring interventions to each client's needs, regardless of diagnosis. The theoretical and empirical bases of exposure are reviewed and specialized assessment and treatment planning techniques are described. User-friendly features include illustrative case examples, sample treatment plans, ideas for exercises targeting specific types of fears, and reproducible handouts and forms that can be downloaded and printed in a convenient 8½" x 11" size. New to This Edition *Chapter on acceptance and commitment therapy (ACT) techniques. *Reflects a shift in the field toward inhibitory learning--helping clients learn to tolerate anxiety and uncertainty to maximize long-term outcomes. *Chapter on uses of technology, such as computer-based therapy and virtual reality tools. *Conceptual, empirical, and clinical advances woven throughout. See also the related client recommendation, *The Anxiety and Worry Workbook, Second Edition*, by David A. Clark and Aaron T.

Mohawk Interruptus is a bold challenge to dominant thinking in the fields of Native studies and anthropology. Combining political theory with ethnographic research among the Mohawks of Kahnawà:ke, a reserve community in what is now southwestern Quebec, Audra Simpson examines their struggles to articulate and maintain political sovereignty through centuries of settler colonialism. The Kahnawà:ke Mohawks are part of the Haudenosaunee or Iroquois Confederacy. Like many Iroquois peoples, they insist on the integrity of Haudenosaunee governance and refuse American or Canadian citizenship. Audra Simpson thinks through this politics of refusal, which stands in stark contrast to the politics of cultural recognition. Tracing the implications of refusal, Simpson argues that one sovereign political order can exist nested within a sovereign state, albeit with enormous

tension around issues of jurisdiction and legitimacy. Finally, Simpson critiques anthropologists and political scientists, whom, she argues, have too readily accepted the assumption that the colonial project is complete. Belying that notion, Mohawk Interruptus calls for and demonstrates more robust and evenhanded forms of inquiry into indigenous politics in the teeth of settler governance.

Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.

Unlock the healing power of cannabis medicine and discover the cutting-edge science behind its remarkable impact on human health. Millions of people around the world are healing illnesses with cannabis. Nonetheless, many physicians remain reluctant to discuss cannabis medicine with their patients. And with so much conflicting misinformation from unreliable sources, finding out if cannabis could be an effective treatment for you or a loved one can feel nearly impossible. This book is the comprehensive resource for people who have not found relief from conventional medicines. Bonni Goldstein, MD, has helped thousands of patients suffering from chronic, difficult-to-treat conditions improve with cannabis. In this revelatory book, she explains the current state of scientific research on how cannabis interacts with human physiology to create homeostasis -- balance -- leading to good health. Many of the plant's compounds, including CBD and CBG, and their therapeutic effects are explained in detail. Readers will learn how to best navigate the multitude of available cannabis-based products, with detailed guidance on safety and usage, and how to customize a personalized cannabis regimen. And Dr. Goldstein presents 28 common conditions for which patients have found cannabis treatment to be effective, including cancer, insomnia and gastrointestinal disorders. As medical cannabis laws continue to evolve, it is more vital than ever for struggling patients to understand the benefits of this plant from an honest, medicine-based perspective. Educational, practical, and thorough, Cannabis Is Medicine empowers patients to make informed decisions about this natural medicine and improve the quality of their lives.

Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

Maintaining dignity for patients approaching death is a core principle of palliative care. Dignity therapy, a psychological intervention developed by Dr. Harvey Max Chochinov and his internationally lauded research group, has been designed specifically to address many of the psychological, existential, and spiritual challenges that patients and their families face as they grapple with the reality of life drawing to a close. In the first book to lay out the blueprint for this unique and meaningful intervention, Chochinov addresses one of the most important dimensions of being human. Being alive means being vulnerable and mortal; he argues that dignity therapy offers a way to preserve meaning and hope for patients approaching death. With history and foundations of dignity in care, and step by step guidance for readers interested in implementing the program, this volume illuminates how dignity therapy can change end-of-life experience for those about to die - and for those who will grieve their passing.

In this volume there is a strong emphasis on translational science, with preclinical approaches suggesting new directions for development of new treatments. Individual chapters describe how neuroimaging, neuroendocrine, genetic and behavioral studies use powerful research tools that are offering a completely new understanding of the factors that increase vulnerability to ADHD. The clinical impact of co-morbid problems, especially obesity and substance misuse, are highlighted and explain what such problems can tell us about the etiology of ADHD, more generally. Reviews of the pharmacology of established drug treatments for ADHD justify an exciting novel theory for their therapeutic actions and address questions about the effects of their long-term use.

Metaphors and exercises play an incredibly important part in the successful delivery of acceptance and commitment therapy (ACT). These powerful tools go far in helping clients connect with their values and give them the motivation needed to make a real, conscious commitment to change. Unfortunately, many of the metaphors that clinicians use have become stale and ineffective. That's why you need fresh, new resources for your professional library. In this breakthrough book, two ACT researchers provide an essential A-Z resource guide that includes tons of new metaphors and experiential exercises to help promote client acceptance, defusion from troubling thoughts, and values-based action. The book also includes scripts tailored to different client populations, and special metaphors and exercises that address unique problems that may sometimes arise in your therapy sessions. Several ACT texts and workbooks have been published for the treatment of a variety of psychological problems. However, no one resource exists where you can find an exhaustive list of metaphors and experiential exercises geared toward the six core elements of ACT. Whether you are treating a client with anxiety, depression, trauma, or an eating disorder, this book will provide you with the skills needed to improve lives, one exercise at a time. With a special foreword by ACT cofounder Steven C. Hayes, PhD, this book is a must-have for any ACT Practitioner.

Interventional Pericardiology Neil H Riordan

This volume is the newest release in the authoritative series of quantitative estimates of nutrient intakes to be used for planning and assessing diets for healthy people. Dietary Reference Intakes (DRIs) is the newest framework for an expanded approach developed by U.S. and Canadian scientists. This book discusses in detail the role of vitamin C, vitamin E, selenium, and the carotenoids in human physiology and health. For each nutrient the committee presents what is known about how it functions in the human body, which factors may affect how it works, and how the nutrient may be related to chronic disease. Dietary Reference Intakes provides reference intakes, such as Recommended Dietary Allowances (RDAs), for use in planning nutritionally adequate diets for different groups based on age and gender, along with a new reference intake, the Tolerable Upper Intake Level (UL), designed to assist an individual in knowing how much is "too much" of a nutrient.

Over the past two decades, there has been a major increase in research into the effects of the arts on health and well-being, alongside developments in practice and policy activities in different countries across the WHO European Region and further afield. This report synthesizes the global evidence on the role of the arts in improving health and well-being, with a specific focus on the WHO European Region. Results from over 3000 studies identified a major role for the arts in the prevention of ill health, promotion of health, and management and treatment of illness across the lifespan. The reviewed evidence included study designs such as uncontrolled pilot studies, case studies, small-scale cross-sectional surveys, nationally representative longitudinal cohort studies, community-wide ethnographies and randomized controlled trials from diverse disciplines. The beneficial impact of the arts could be furthered through acknowledging and acting on the growing evidence base; promoting arts engagement at the individual, local and national levels; and supporting cross-sectoral collaboration.
