Publisher's Note: Products purchased from 3rd Party sellers are not guaranteed by the Publisher for quality, authenticity, or access to any online entitlements included with the product. Frames of Reference for Pediatric Occupational Therapy, Fourth Edition, uses frames of reference for diagnostic categories (neuro-development, social participation, etc.) as effective blueprints for applying theory to pediatric OT practice. Updated with new chapters, case examples, and a new focus on evidence-based practice. This proven approach helps students understand the "why" of each frame of reference before moving on to the "how" of creating effective treatment programs to help pediatric clients lead richer, fuller lives. The book first covers the foundations of frames reference for pediatric OT (Section I), and then covers commonly used frames of reference such as motor

skill acquisition, biomechanical, and sensory integration (Section II). A final section discusses newer focused/specific frames of reference like handwriting skills and social participation. A standardized format within each frame of reference chapter covers the same elements (Theoretical Base, Supporting Evidence, the Function/Dysfunction Continuum, Guide to Evaluation, and Application to Practice) to help students build the knowledge and skills needed for effective practice.

A distinguished clinician, scientist, and educator, Renée Taylor, PhD, has defined a conceptual practice model, the Intentional Relationship Model, to identify how the client and the therapist each contribute to the unique interpersonal dynamic that becomes the therapeutic relationship. She emphasizes how therapists must act deliberately, thoughtfully, and with vigilant anticipation of the challenges and breakthroughs that have the potential to influence the course of the relationship.

Occupational Therapy and Use of Self Lippincott Williams & Wilkins

Occupational therapists are expected to maintain their knowledge of best practice by independently keeping up to date on the latest research. With this work, the authors have assembled the evidence for effectiveness of occupational therapy for adults and older adults. It brings together the latest published peer-reviewed literature, conceptual approaches, outcome measures, and intervention approaches to address the three main areas by: Identifying a finite set of interventions which occupational therapists deliver most often, and providing details of those intervention approaches; Identifying where the research evidence shows that occupational therapists can achieve specific positive effects as a result of those interventions; Identifying the outcome measures most commonly and reliably used by researchers in occupational therapy to demonstrate the effects of interventions. The authors have comprehensively reviewed all of the intervention effectiveness literature for occupational therapy provided for adults. The material reviewed crosses all diagnostic categories and areas of practice for adults and older adults. Analysis of over 500 research studies and systematic reviews form the basis for this book.
