*Ethics and Law for the Health Professions* Routledge

This unique textbook utilizes an integrated, case-based approach to explore how the domains of bioethics, public health and the social sciences impact individual patients and populations. It provides a structured framework suitable for both educators (including course directors and others engaged in curricular design) and for medical and health professions students to use in classroom settings across a range of clinical areas and allied health professions and for independent study. The textbook opens with an introduction, describing the intersection of ethics and public health in clinical practice and the six key themes that inform the book's core learning objectives, followed by a guide to using the book. It then presents 22 case studies that address a broad spectrum of patient populations, clinical settings, and disease pathologies. Each pair of cases shares a core concept in bioethics or public health, from community perspectives and end-of-life care to medical mistakes and stigma and marginalization. They engage learners in rigorous clinical and ethical reasoning by prompting readers to make choices based on available information and then providing additional information to challenge assumptions, simulating clinical decision-making. In addition to providing a unique, detailed clinical scenario, each case is presented in a consistent format, which includes learning objectives, questions and responses for self-directed learning, questions and responses for group discussion, references, and suggested further reading. All cases integrate the six themes of patient- and family-centered care; evidence-based

practice; structural competency; biases in decision-making; cultural humility and awareness of the culture of medicine; and justice, social responsibility and advocacy. The final section discusses some challenges to evaluating courses and learning encounters that adopt the cases and includes a model framework for learner assessment.

The ETHICS IN ACTION program brings to life the ethical issues and dilemmas counselors often encounter-and provides ample opportunity for discussion, self-exploration, and problem solving of the issues and dilemmas. The 22 video vignettes are based on a workshop for a group of counseling students, which included challenging questions and lively discussion, role-plays, and comments from the students and the group leaders. This educational program is divided into three segments: ethical decision-making, values and the helping relationship, and boundary issues and multiple relationships in counseling. The adversary professions--law, business, and government, among others--typically claim a moral permission to violate persons in ways that, if not for the professional role, would be morally wrong. Lawyers advance bad ends and deceive, business managers exploit and despoil, public officials enforce unjust laws, and doctors keep confidences that, if disclosed, would prevent harm. Ethics for Adversaries is a philosophical inquiry into arguments that are offered to defend seemingly wrongful actions performed by those who occupy what Montaigne called "necessary offices." Applbaum begins by examining the career of Charles-Henri Sanson, who is appointed executioner of Paris by Louis XVI and serves the punitive needs of the ancien régime for decades. Come the French Revolution, the King's Executioner becomes the king's executioner, and he ministers with professional detachment to each defeated political faction throughout the Terror and its aftermath. By exploring one extraordinary role and the arguments that can be offered in its defense, Applbaum raises unsettling doubts about arguments in defense of less sanguinary professions and their practices. To justify harmful acts, adversaries appeal to arguments about the rules of the game, fair play, consent, the social construction of actions and actors, good outcomes in equilibrium, and the legitimate authority of institutions. Applbaum concludes that these arguments are weaker than supposed and do not morally justify much of the violation that professionals and public officials inflict. Institutions and the roles they create ordinarily cannot mint moral permissions to do what otherwise would be morally prohibited.

*A Global Approach* OUP Oxford

People often act reflexively when faced with an ethical challenge. The necessity to make a fast decision leaves little time to think clearly. We get distracted by what our colleagues and others expect from us, and we make snap decisions that we regret. While most agree that outright lying, stealing, and harming are wrong, they seem to disagree about smaller compromises. This book argues that it's better and more satisfying to choose instead of react, to understand distinctions instead of guess what is right for us, and to remain cognizant of the impact of ethical compromise on our effectiveness at work and our personal relationships. The chapters of this book offer lessons and practical tools to help readers: 1. Develop radar to identify the situations where we are forced to make ethical compromises; 2. Understand how to use solid ethical logic and principles to foster clear thinking; 3. Draft and refine a personal code of conduct, and make it practical for everyday use; 4. Go beyond ethical basics to using your personal code as a lever for making more consistent decisions and reducing stress in work and life. Many books about ethics discuss weighty and controversial issues that few of us deal with in daily life--abortion, euthanasia, capital punishment, animal rights. While these books are valuable, they are not so much tools for decision making as food for thought. This book, in contrast, focuses on one of ethics' most insidious problems: our inability to make clear and consistent choices in everyday life. The practical tools and techniques in this book help readers design a set of personal standards, based on sound ethical reasoning, for reducing everyday compromises.

In Codes of Ethics and the Professions 12 contributors, including philosophers, historians, lawyers, nurses, psychiatrists, and a journalist seek answers to a range of tough questions. Global Engineering Ethics introduces the fundamentals of ethics in a context specific to engineering without privileging any one national or cultural conception of ethics. Numerous case studies from around the world help the reader to see clearly the relevance of design, safety, and professionalism to engineers. Engineering increasingly takes place in global contexts, with industrial and research teams operating across national and cultural borders. This adds a layer of complexity to already challenging ethical issues. This book is essential reading for anyone wanting to understand or communicate the ethics of engineering, including students, academics, and researchers, and is indispensable for those involved in international and cross-cultural environments. Takes a global-values approach to engineering ethics rather than prioritizing any one national or regional culture Uses engineering case studies to explain ethical issues and principles in relatable, practical contexts Approaches engineering from a business perspective, emphasizing the extent to which engineering occurs in terms of profit-driven markets, addressing potential conflicts that arise as a result Provides extensive guidance on how to carry out ethical analysis by using case studies, to practice addressing and thinking through issues before confronting them in the world

In the aftermath of the Grenfell Tower tragedy, this new book provides thought provoking commentary on the nature of the relationship between society, the prevailing economic system and professionalism in the built environment. It addresses the changing responsibilities of professionals and in particular their obligation to act in the wider public interest. It is both an introduction to and an examination of professionalism and professional bodies in the sector, including a view of the future of professionalism and the organisations serving it. Simon Foxell outlines the history of professionalism in the sector, comparing and contrasting the development of the three major historic professions working in the construction industry: civil engineering, architecture and surveying. He examines how their systems have developed over time, up to the current period dominated by large professional services firms, and looks at some options for the future, whilst asking difficult questions about ethics, training, education, public trust and expectation from within and outside the industry. The book concludes with a six-point plan to help, if not ensure, that the professions remain an effective and essential part of both society and the economy; a part that allows the system to operate smoothly and easily, but also fairly and to the benefit of all. Essential reading for built environment professionals and students doing the professional studies elements of their training or in the process of applying for chartership or registration. The issues and lessons are applicable across all building professions.

This book trains students of the caring professions, across health and social care, in the basic philosophical skills and knowledge needed to deal with the ethical aspects of their profession. It shows why ethical education is required, and teaches the skills of reasoning that equip professionals to think critically about the theories and arguments used in ethical discussions. It demonstrates how we can be confident that we can rely on common moral ground; but it also points out how we need to recognise the influence of different world-views, and to note how, on some issues, these can lead us in starkly different directions. It explains relevant philosophical theories, and evaluates their strengths and weaknesses - particularly in relation to what is required for proper professional ethics. It shows how to employ the commonly accepted framework of four ethical principles - beneficence, non-maleficence, autonomy, and justice. These various matters are then illustrated in two extended case studies, which focus on the problem of euthanasia, and the question of screening for disability and the value of human life. Ethical Basics for the Caring Professions is designed for use on all health and social care and human services courses on ethics and values. It will also be of interest to academics and professionals working within these fields.

**Ethics and Decision Making in Counseling and Psychotherapy, Fourth Edition** SAGE

People professions - such as social work, teaching, nursing, ministry and counselling - are at heart ethical or moral enterprises. Much recent theorizing has been concerned to show that effective professional deliberation and judgement cannot be reduced either to technical rationality or to simple obedience to general occupational procedures or prescriptions. Professional judgement would seem to require the development of a distinctive mode of practical (ethical) reflection or 'wisdom' - perhaps along the lines of Aristotle's 'phronesis' or practical wisdom. Reflection is required to address such key professional concerns as: What is the impact of official prescription and regulation on professional judgement? How should conflicts of professional judgment and public/political accountability be resolved? How might one reconcile tensions between universal justice and equality and particular client need? What is the role of emotion and/or affect in 'people professional' practice? This ground-breaking work addresses, in a

thoroughly multidisciplinary way, the central question of the nature of professional judgement and deliberation that has recently come to the fore in the academic literature of profession and professionalism. It proposes a marked shift - in theory, practice and policy-making - away from technical-rational approaches to professional decision-making in favour of reflection and deliberation informed by responsible moral judgement. This reflects a significant progressive trend in this literature by taking practical wisdom, rather than technical rationality, to lie at the heart of professional judgement. It is unique in bringing together key authors from different professional fields to address the issue of professional wisdom in a cross-professional and multidisciplinary way.
