Reading for Speed and Fluency "O'Reilly Media, Inc."

When individuals read or listen to prose they try to understand what it means. This is quite obvious. However, the cognitive mechanisms that participate in prose comprehension are far from obvious. Even simple stories involve complexities that have stymied many cognitive scientists. Why is prose comprehension so difficult to study? Perhaps because comprehension is guided by so many domains of knowledge. Perhaps because some critical mysteries of prose comprehension reside between the lines-in the mind of the comprehender. Ten years ago very few psychologists were willing to dig beyond the surface of explicit code in their studies of discourse processing. Tacit knowledge, world knowledge, inferences, and expectations were slippery notions that experimental psychologists managed to circumvent rather than understand. In many scientific circles it was taboo to investigate mechanisms and phenomena that are not directly governed by the physical stimulus. Fortunately, times have changed. Cognitive scientists are now vigorously exploring the puzzles of comprehension that lie beyond the word. The study of discourse processing is currently growing at a frenetic pace.

*Mastering Academic Reading* is meant to challenge advanced academically oriented students of English. The units and the readings within them are long. The comprehension and expansion exercises after them are demanding. The hoped-for outcome is that students trained using this textbook will be able to better hold their own in university classes where the reading volume across disciplines and vocabulary demands are high. Almost every reading is taken, in minimally adapted form, from a book or academic / professional journal. Two introductory passages have been composed expressly for this book in order to provide narrowly focused background material. Beyond these pieces, readers are in the hands of "real-world" authors and their difficult, lexically diffuse, and allusion-filled creations. Journal articles and book excerpts predominate, but *Mastering Academic Reading* also offers a book review and a government pamphlet as well. Since one aspect of reading practice builds on others, the units are laid out in tiers, not in sections. Each unit has been organized into three tiers. In general, there is one reading per tier, although the first tier in Unit 3 contains two passages (both necessary to provide conceptual background for the other two tiers). Each reading is 3,500-5,000 words. The book focuses on the three primary goals of academic reading: reading to learn; reading to integrate, write, and critique texts; and reading for basic comprehension.

Using a framework based on principles of teaching and learning, this guide for teachers and teacher trainees provides a wealth of suggestions for helping learners at all levels of proficiency develop their reading and writing skills and fluency. By following these suggestions, which are organized around four strands - meaning-focused input, meaning-focused output, language-focused learning, and fluency development - teachers will be able to design and present a balanced program for their students. Teaching ESL/EFL Reading and Writing, and its companion text, Teaching ESL/EFL Listening and Speaking, are similar in format and the kinds of topics covered, but do not need to be used together. Drawing on research and theory in applied linguistics, their focus is strongly hands-on, featuring easily applied principles, a large number of useful teaching techniques, and guidelines for testing and monitoring. All Certificate, Diploma, Masters and Doctoral courses for teachers of English as a second or foreign language include a teaching methods component. The texts are designed for and have been field tested in such programs.

This book focuses on the challenges of teaching in diversely multilingual classrooms, discussing how these challenges and complexities interact in the preparation of teachers (language & content areas) in and for multilingual settings, and how they impact on educational processes, developments, and outcomes. Teacher education in multilingual contexts is a key topic and occupies an important position in efforts to improve educational outcomes and quality for all stakeholders. It is seen as essential for competitive participation in global economic activity and for providing opportunities to enjoy the benefits of increased prosperity. Teacher education is generally expected to address both the demand for multilingualism and the challenges of teaching in diversely multilingual classrooms, which are important foci at policy and institutional levels. For example, the demand for quality outcomes is manifested in state-administered standards and performance cultures that regulate entry and practices, and poses ethical and pedagogic dilemmas for teachers. This book presents high-quality empirical research on education in multilingual societies, highlighting findings that, in addition to providing descriptions of language learning, development, and use in language contact and multilingual contexts, will help shape future language education policy and practices in multilingual societies.

To those familiar with the field of linguistics and second-language acquisition, Stephen Krashen

needs no introduction. He has published well over 300 books and articles and has been invited to deliver more than 300 lectures at universities throughout the United States and abroad. His widely known theory of second-language acquisition has had a huge impact on all areas of second-language research and teaching since the 1970s. This book amounts to a summary and assessment by Krashen of much of his work thus far, as well as a compilation of his thoughts about the future. Here, readers can follow Krashen as he reviews the fundamentals of second-language acquisition theory presents some of the original research supporting the theory and more recent studies offers counterarguments to criticisms explores new areas that have promise for progress in both theory and application. An invaluable resource on the results of Krashen's many years of research and application, this book covers a wide range of topics: from the role of the input/comprehension hypothesis (and its current rival-the comprehensible output hypothesis), the still-very-good idea of free voluntary reading, and current issues and controversies about teaching grammar, to considerations of how it is we grow intellectually, or how we "get smart."

Talking math with your child is simple and even entertaining with this better approach to shapes! Written by a celebrated math educator, this innovative inquiry encourages critical thinking and sparks memorable mathematical conversations. Children and their parents answer the same question about each set of four shapes: "Which one doesn't belong?" There's no one right answer--the important thing is to have a reason why. Kids might describe the shapes as squished, smooshed, dented, or even goofy. But when they justify their thinking, they're talking math! Winner of the Mathical Book Prize for books that inspire children to see math all around them. "This is one shape book that will both challenge readers' thinking and encourage them to think outside the box."--Kirkus Reviews, STARRED review

This comprehensive examination of extensive reading shows how reading large quantities of books and other materials can provide students with essential practice in learning to read and help them develop a positive attitude towards reading, which is sometimes missed in second language classes. The authors first examine the cognitive and affective nature of reading and then offer a wealth of practical advice for implementing extensive reading with second language learners. Suggestions are provided for integrating extensive reading into the curriculum, establishing a library, selecting reading materials, and keeping records for purposes of evaluation. The text also describes a wide variety of classroom activities to supplement individualized silent reading. The information will be useful both for pre-service teachers and for teachers and administrators who want to improve the teaching of reading in their second language programs.
