 Are you ready to get started with PHTLS? Experience PHTLS for yourself by previewing a free module from PHTLS Online. Then, complete the NAEMT Instructor Course and learn more about the simple steps to become a PHTLS instructor here. To learn more about becoming a NAEMT Course site, visit this page. Each new print copy of PHTLS: Prehospital Trauma Life Support, Eighth Edition also includes an access code that unlocks a complete eBook and skills videos. PHTLS: Prehospital Trauma Life Support, Eighth Edition is the premier and proven global prehospital trauma education program from NAEMT. For three decades, PHTLS has improved the quality of trauma patient care and has saved lives. The Eighth Edition of PHTLS continues the PHTLS mission to promote excellence in trauma patient management by all providers involved in the delivery of prehospital care through global education. This legendary program was first developed by the National Association of Emergency Medical Technicians (NAEMT) in the early 1980s in cooperation with the American College of Surgeons Committee on Trauma (ACS-COT). Its medical content is continuously revised and updated to reflect current, state-of-the-art knowledge and practice. PHTLS promotes critical thinking as the foundation for providing quality care. It is based on the belief that EMS practitioners make the best decisions on behalf of their patients when given a good foundation of knowledge and key principles. The Eighth Edition of PHTLS features a new chapter, Physiology of Life and Death. This chapter creates a solid understanding of the physiology of life and pathophysiology that can lead to death. This understanding is essential for the prehospital care provider if abnormalities are to be found and addressed quickly in the trauma patient. Clear Approach to Assessing a Trauma Patient In the field, seconds count. PHTLS teaches and reinforces the principles of rapidly assessing a trauma patient using an orderly approach, immediately treating life-threatening problems as they are identified, and minimizing any delays in initiating transport to an appropriate destination. Dynamic Technology Solutions World-class content joins instructionally sound design in a user-friendly online interface to give instructors and students a truly interactive and engaging learning experience with: • eBook • Video Demonstrations of Critical Skills • Interactive Lectures PHTLS Online Continuing Education is also available. Designed for EMS and medical professionals at all levels of training, *Tactical Medicine Essentials, Second Edition* provides the foundation needed to become a world-class tactical medical provider (TMP). Written by an experienced team of authors from diverse backgrounds, this text covers the essential curriculum of tactical medicine, including tactical patient assessment, expedient extrication and evacuation, and self-defense skills. The Second Edition thoroughly prepares medical professionals to safely accompany a SWAT unit into the tactical environment. Current, State-of-the-Art Medical Content for the Tactical Environment The rapidly changing tactical environment requires specialized rapid assessment techniques. The tactical patient assessment process is presented in a single, comprehensive chapter, ensuring that students understand how to rapidly apply this specialized process to the patient in the tactical environment. Each traumatic injury chapter further reinforces the tactical patient assessment process by highlighting the unique aspects of each traumatic injury. A new chapter about active assailant mass casualty incidents has been added. Law enforcement education topics for TMPs are compiled in a new appendix. Dynamic Features These features allow EMS and medical professionals to take the extra step toward becoming outstanding TMPs: • At the Scene Advice from experienced TMPs on how to excel during a mission • Safety Information on how to remain safe in the tactical environment, even under the threat of violence • Medical Gear Tips on the best equipment to pack and utilize in the tactical environment • Detailed Step-by-Step Skill Reviews A thorough discussion of how to perform lifesaving skills in the high-intensity tactical environment

Aeromedical Evacuation Jones & Bartlett Publishers
Tactical Combat Casualty Care (TCCC) has saved hundreds of lives during our nation's conflicts in Iraq and Afghanistan. Nearly 90 percent of combat fatalities occur before a casualty reaches a medical treatment facility. Therefore, the prehospital phase of care is needed to focus on reducing the number of combat deaths. However, few military physicians have had training in this

area and, at the onset of hostilities, most combat medics, corpsmen, and pararescue personnel in the U.S. military have been trained to perform battlefield trauma care through civilian-based trauma courses. These courses are not designed for the prehospital combat environment and do not reflect current practices in the area of prehospital care. TCCC was created to train Soldiers and medical personnel on current best practices for medical treatment from the point of injury to evacuation to Role 3 facilities
Tactical Combat Casualty Care Handbook Lippincott Williams & Wilkins
 The purpose of this handbook is to provide assistance to both new and experienced medical directors as they strive to provide the highest quality of out-of-hospital emergency medical care to their communities and foster excellence within their agencies. The handbook will provide the new medical director with a fundamental orientation to the roles that define the position of the medical director while providing the experienced medical director with a useful reference tool. The handbook will explore the nuances found in the EMS industry—a challenge to describe in generalities due to the tremendous amount of diversity among EMS agencies and systems across the Nation. The handbook does not intend to serve as an operational medical practice document, but seeks to identify and describe the critical elements associated with the position.
Tactical Emergency Medical Support Jones & Bartlett Learning
 This text is designed to present a comprehensive and state-of-the-art approach to dismounted complex blast injuries. Sections address care of these patients from the point of injury through rehabilitation. The specific areas addressed include blast mechanics, stabilization and hemorrhage control at the point of injury, early resuscitation at local hospitals, a systematic approach to surgical care, and finally reconstruction and rehabilitation. Specific chapters focus on operative management of pelvic, abdominal, genitourinary, orthopedic, neurological and thoracic injuries. The authors of each chapter, are experts in treating DCBIs that have had direct hands-on experience through military deployments in Iraq and Afghanistan. Each chapter describes patient presentation and an algorithm outlining treatment with support from the literature. The text will conclude with three chapters. The first explores new advances in care that can be applied to these injuries. The second highlights the organization and team approach to care of these patients. Finally, the last chapter describes an actual case, cared for by the editors, that encompasses points from the chapters in the text. Extensive illustrations and flow diagrams are used throughout the text. This text is specifically designed to be a “how to” guide for

inexperienced military and civilian providers. The chapters are organized in a step-wise fashion that mirrors the patient's course from point of injury through their hospital course. Combining authors' experience with illustrations and algorithm diagrams creates a text that is easy to use as a reference text or basis of training for future military and civilian surgeons.

Emergency Medical Services (EMS) agencies regardless of service delivery model have sought guidance on how to better integrate their emergency preparedness and response activities into similar processes occurring at the local, regional, State, tribal, and Federal levels. This primary purpose of this project is to begin the process of providing that guidance as it relates to mass care incident deployment.

This handbook was previously distributed as a supplement to the Journal of Special Operations Medicine. The realm of special operations forces (SOF) medicine is a unique and ever-changing one that demands specialized training for our joint SOF. Managing trauma on today's battlefield presents a dynamic array of challenges where limited resources can be rapidly overwhelmed. An austere environment, hostile gunfire, and delays in casualty evacuation (CASEVAC) are the norms for the special operations medic. The material in this handbook was gleaned from special operations medics operating in the Global War on Terrorism and other operational environments. It should not be viewed as a substitute for the professional training and judgment of special operations medics; rather, it is designed to be a hip-pocket reference on the tactics, techniques, and procedures (TTP) of SOF-relevant tactical combat casualty care. Key Lessons Ninety percent of combat loss of life occurs before casualties ever reach a military treatment facility (MTF); treatment prior to casualty evacuation is vital. Litter carries are fundamental for good patient care; they prevent further injury and get individuals off target as soon as possible. Rehearse manual carry methods prior to deployment. Every special operations warfighter should carry a tourniquet and be thoroughly familiar with its application. When managing multiple casualties, apply the principles of triage in classifying the priority of treatment and evacuation. Rehearse and employ all of the mechanics of CASEVAC from the point of injury to the handover at a MTF. This handbook provides a number of considerations when employing medical support to SOF in combat. The challenges are numerous, but the special operations medic must deliver medical care to save Soldiers' lives. The collection of TTP in this handbook will enhance the medic's ability to determine the optimum method to deliver casualty survival assistance.

Public safety professionals and emergency responders today face greater threats than ever before in our history. The traditional role of law enforcement has vastly expanded to require extraordinarily broad-based emergency response capabilities. Law Enforcement Responder: Principles of Emergency Medicine, Rescue, and Force Protection prepares homeland security leaders, law enforcement officers, security professionals, and public safety officials for the wide range of emergency responses they must perform on a daily basis. The textbook addresses all of the competency statements in the National EMS Education Standards at the Emergency Medical Responder level, as well as additional lifesaving content specific to law enforcement that far exceeds the core curriculum. The Tactical Emergency Casualty Care Course Manual is the printed component for the NAEMTs 16-hour continuing education Tactical Emergency Casualty Care (TECC) Course. It may be used by both instructors and students as a resource to prepare for the TECC course and as a reference that discusses the current best practices for EMS providers to utilize in the response to and care of patients in a civilian tactical environment. The TECC Course does not offer certification as a tactical medic it is intended to teach all EMS providers the best patient care and safety practices in a civilian tactical environment, such as an active shooting hostile event. Composed of 10 lessons, The TECC Course Manual will: Cover the phases of care in a civilian tactical environment, Describe step-by-step the life-saving skills that may be performed in a civilian tactical environment, Provide safety and survival strategies for EMS providers and their patients In addition to the TECC Course Manual, instructors may also purchase the TECC Online Instructors Toolkit (9781284483888). This resource features 10 lesson presentations in PPT, as well as interactive patient simulations and skill stations that allow students to gain experience in a safe environment monitored by experienced EMS providers.

PHTLS: Soporte Vital de Trauma Prehospitalario, octava edición, es el siguiente paso en la evolución del principal programa educativo de Trauma Prehospitalario. Durante tres décadas, el PHTLS ha mejorado la calidad del cuidado del paciente traumatizado y ha salvado vidas. La octava edición del PHTLS continúa con la misión de promover la excelencia en el manejo del paciente traumatizado en todos los proveedores involucrados en el cuidado prehospitalario por medio de una educación global. Este programa legendario fue desarrollado a principios de la década de los ochenta del siglo pasado por la Asociación Nacional de Técnicos en Urgencias Médicas (Association of Emergency Medical Technicians, NAEMT), con la cooperación del Comité para el Trauma del Colegio Americano de Cirujanos (American College of Surgeons Committee on Trauma, ACS-COT). El contenido médico se revisa y actualiza de manera continua para que refl eje lo último y lo más actualizado del conocimiento y la práctica. El PHTLS promueve el pensamiento crítico como la base para proporcionar un cuidado de calidad. Se fundamenta en la creencia de que los practicantes de los servicios médicos de urgencia toman las mejores decisiones en beneficio de sus pacientes cuando se les da una buena base de conocimiento y principios clave. La octava edición de PHTLS presenta un nuevo capítulo, Fisiología de la vida y la muerte, que crea un entendimiento sólido de la fisiología de la vida y de la fisiopatología que puede llevar a la muerte. Ese entendimiento es esencial para el proveedor del cuidado prehospitalario para que pueda tratar las anomalías rápidamente, en caso de encontrarlas en el paciente traumatizado. Model Rules of Professional Conduct John Wiley & Sons

Medical support for special weapons and tactics (SWAT) units is different from civilian EMS in many ways. A tactical medical provider (TMP) is charged with providing life-saving care to downed SWAT officers and taking measures to defend against criminal suspects. Mastery of these skills requires extensive, specialized tactical emergency medical services (TEMS) training and experience in the tactical environment. Designed for EMS and medical professionals of all levels of training, Tactical Medicine Essentials provides the foundation needed to create world-class TMPs. Written by an experienced team of authors from diverse backgrounds, this text covers the essential curriculum of tactical medicine, including tactical patient assessment, expedient extrication and evacuation, and self-defense skills. Emergency Medical Services, 2 Volumes Elsevier Health Sciences

This book is about protecting our protectors. The men and women, and the agencies they work for, who go out every day and risk their lives to protect and serve the public. The purpose of this book is to highlight the common reasons why liability lawsuits occur with the use of tactical medical responders (Fire, EMS, Police), as well as how to prepare and protect yourself and your department. Good training by qualified instructors, and well thought out, expertly prepared policies and procedures are your best shields against liability. Injuries or other conditions which require medical attention happen all too frequently in public safety situations. Sometimes, this medical need is provided by a medically trained civilian, and sometimes it is a law enforcement officer who has been trained to address these situations. Regardless of who is providing the medical services, there are LEGAL CONSIDERATIONS. We live in a world in which liability must be considered at all times, both civil and criminal. This book is a broad brush attempt to address these concerns so that law enforcement Responders and civilians working for or with law enforcement can avoid getting themselves entangled in a lawsuit of their own. For better or for worse, we live in an era in which it isn't enough for us to know how to do our jobs, we also need to know how to do our jobs without getting sued. What makes sense for our industries may set us up for liabilities in ways we hadn't even considered. REVIEWS: "The use of tactical medical responders is something new to the scene. Up until Mr. Di Giorgio's effort, there wasn't a good reference manual for departments and responders to look to for guidance. Now there is!" - Lori B. Duff, Esquire "Raffaele crafts the standard of care for tactical medical responders in a manner that crystalizes his knowledge of the subject matter and his proven experience all enfolded within a spectacular sense of humility." -Paul Michael Viollis, Sr. Ph.D. This book is recommended reading by the Anti-Terrorism Accreditation Board (ATAB) as well as the Center for Law Enforcement Technology, Training and Research Inc. This manual is designed to serve as a starting point for the development and implementation of a Tactical Medical

Emergency Support unit at the local level. It was originally developed for the Marietta, Georgia Special Weapons and Tactics Team and the Tactical Emergency Medical Support unit which was formed in 2005. As the TEMS unit evolved, this manual was developed. Due to demand and interest, it has been revised for more general application. The guidelines and philosophies in this manual have been developed after researching the policies of a number of different civilian departments, examining the policies and procedures currently in place for training military medical and nonmedical personnel, recognizing the limitations imposed by the Scope of Practice procedures in the State of Georgia, and recognizing the limitations of the guidelines imposed by the National Registry of Emergency Medical Technicians. The policies and procedures that follow must be individualized to allow for the local Medical Director's guidelines and to follow local Scope of Practice guidelines. The concept of Tactical Medical Emergency Protocols was developed by the Curriculum and Examination Committee of the United States Special Operations Command

Surgeon General's Office for the military and has been adapted for civilian use; the Tactical Combat Casualty Care concepts were developed by the Committee on Tactical Combat Casualty Care and have been expanded upon for application by the Committee on Tactical Emergency Casualty Care; the Ranger Medic Handbook (2007) edition served as the starting point for developing the Triage recommendations, the flow charts, and the aid bag configurations; and the USAF PJ Handbook provided valuable information on environmental injuries. In addition to the Guidelines on Tactical Combat Casualty Care (TCCC), the Adult and Pediatric Guidelines on Tactical Emergency Casualty Care (TECC) are also included. Ideally, this manual will provide a starting point for further discussion and development of TEMS units, and will provide a basic framework from which these units' individual policies and procedures may be developed.

The Advanced Tactical Paramedic Protocols Handbook (ATP-P) 8th

Edition contains the 2014 updates for the US Special Operations Command Tactical Trauma Protocols and Tactical Medical Emergency Protocols. The ATP-P handbook is a checklist to emergent medical care protocol. The guidelines contained in this handbook are created, compiled, and reviewed annually by the Curriculum and Examination Board, which consists of a combined group of Special Operations Forces (SOF) physicians, advanced tactical paramedics (ATPs), SOF medical personnel from all branches, and civilian medical personnel. For quick reference in a lifesaving situation, the uniform pocket-sized ATP-P Handbook contains the USSOCOM Tactical Trauma Protocol and Tactical Emergency Medical Protocol; Canine-TCCC; the Recommended Drug List (RDL), (which covers the side-effects / adverse effects / contraindications / warnings, adult and pediatric dosages, and what protocols they would be relevant to); Burn and Nerve Charts, and the Military Acute Concussion Evaluation (MACE) and pre-hospital Combat Medic/Corpsman Algorithm (CMA) Charts that are approved for use by the ATP.
